# ABSTRACT

The "DYNAMIC WEBSITE DEVELOPMENT FOR EKAGGA TECHNOLOGY" is a live website for the organization. It is a website wherein users can summarize a detail of the company.

The main objective of the project is to develop a module where in future, developers can use the module for their website development and also implement the design display of the website.

The main objectives of the project are:

• Creating a number of pages (nodes) for complete company's profile.

• Creating a module (block) which accepts images and text and also directs to the desired page (node) to a specific node.

• Create a slideshow on the front-page to improve the look and feel of the website.

• Implement a theme which allows a user- friendly interface for visitors.

• Increase efficiency and convenience in understanding my application for future development.

• Apply follow links using existing modules for the visitor in order to follow the developer/administrator in social pages.
