

CONTENTS

1. INTRODUCTION

- 1.1 Overview of Wireless Sensor Network
- 1.2 Data Aggregation and Types of data aggregation Technique
- 1.3 Motivation
- 1.4 The contribution of our work
- 1.5 Report Organization

2. CLASSIFICATION OF DIFFERENT TECHNIQUE AND RELATED WORK

2.1 Data Aggregation techniques in Flat Network

- 2.1.1 Push Diffusion
- 2.1.2 Two phase pull diffusion
- 2.1.3 One phase pull diffusion

2.2 Data aggregation in Hierarchical Networks

- 2.2.1 Cluster based data aggregation
- 2.2.2 Chain based data aggregation
- 2.2.3 Tree based data aggregation
- 2.2.4 Grid based data aggregation

2.3 RELATED WORK

- 2.3.1 Ant colony optimization technique
- 2.3.2 Data aggregation in wireless sensor networks using ant colony algorithm

3. PROPOSED APPROACH

- 4.1 Algorithm
- 4.2 Simulation Result and Analysis

4. CONCLUSION

- 4.1 Scope
- 4.2 Future work

6. REFERENCE

TABLES

Table 1: Experimental Parameters

Table 2: Experimental result for total energy consumption of the network where range 20.

Table 3: Experimental result for total energy consumption of the network where range 25.

Table 4: Experimental result for total energy consumption of delivering data packets

Table 5: Experimental result for total energy consumption of delivering control packets

FIGURES

Figure 1: Total energy consumption vs. the number of source nodes for methods Ant-1P, Ant-2P, Ant-1 and Ant-2 with R=20.

Figure 2: Total energy consumption vs. the number of source nodes for methods Ant-1P, Ant-2P, Ant-1 and Ant-2 with R=25

Figure 2: Total energy consumption for data transmission of the different number of source nodes

Figure 3: Total energy consumption of the overhead for the different no of source nodes

Figure 4: The aggregation trees formations in first run.
