

ABSTRACT

The project entitled “**Improving design of the NESDI Geo portal and Development of applications for Water, Rural development and Election management**”, is a regional web portal created for the North Eastern states for sharing data, reports on different development projects, natural resource management ,water resource management and district level planning. This has a Geo-Portal where users can view maps and search metadata. Along with maps, attribute data for various vector layers can be viewed by clicking on the layers. Users can upload metadata online, edit and search metadata.

The final portal has a nice interface, a well-designed database which is easy to use and maintain.
