

Contents

| | |
|---------------------------------------------------------|----|
| 1. Introduction and problem definition | 1 |
| 2. Overview of worms and defense mechanism | 5 |
| 2.1 Worms | 5 |
| 2.2 Vulnerabilities | 8 |
| 2.3 Defence mechanisms | 10 |
| 2.3.1 Vulnerability signature | 11 |
| 2.3.2 Signature based defense | 12 |
| 3. The Proposed Vulnerability Signature Generator | 14 |
| 3.1 The Modular Structure | 15 |
| 3.2 Need for the merging module | 18 |
| 4. The Merging module | 19 |
| 4.1 CFG | 19 |
| 4.2 Module architecture | 20 |
| 4.3 CFG construction & GDL file generation | 21 |
| 4.4 Parsing & maintenance of Data Structure | 21 |
| 4.4.1 Extraction of Basic blocks | 23 |
| 4.4.2 Data structure for a node of CFG | 24 |
| 4.4.3 Extraction of edge information | 24 |
| 4.4.4 Data structure for edge | 25 |
| 4.5 What is CFG Pruning? | 25 |
| 4.6 How CFG pruning help in the proposed system? | 25 |
| 4.7 CFG merging | 26 |
| 4.7.1 Some Important Definitions | 26 |
| 4.7.2 Loop Merge | 27 |
| 4.7.3 Branch Merge | 32 |
| 4.7.4 Description of both the algorithms | 36 |
| 5. Test Results | 37 |
| 6. Conclusion & Future work | 42 |
