

ABSTRACT

In the present day Audio Player is a much needed entertainment tool for every age group of people and they are very much attached with it for maximum time while they want to be entertained.

Multi-Lingual Media Content Synchronizer is a Desktop based application. Basically this is a tool which helps to tag lyrics in multiple languages in synchronized manner. Generally tagging word is much time consuming for any tool, so the most fascinating feature of this tool is to tag word automatically which consume less time compare to other products available in the market. This tool has some extra feature like tagging meaning, singer name, embedding audio song properties which can help users (entertainers) to gain knowledge about the song,. It includes many user friendly features that can helps in its popularity.
