

## CONTENTS

<b>Chapter 1</b>	<b>Introduction</b>	1
<b>Chapter 2</b>	<b>Project Goal</b>	2
<b>Chapter 3</b>	<b>State based programming</b>	3
3.1	Main features	3
3.2	State based programming paradigm	4
3.3	Automata based program structure	4
3.3.1	Automata interaction	4
3.4	Advantages of state based programming	5
3.5	Scope	6
3.6	Compared against imperative and procedural programming	6
3.7	Existing tools on state-based programming	6
3.8	A Simple Implementation of DFA in C	7
<b>Chapter 4</b>	<b>Workflow</b>	
4.1	Introduction	
4.2	Task	9
4.3	Workflow patterns	9
4.3.1	Basic control flow patterns in colored petrinet model (workflow primitives)	10
4.4	Case study- hospital management	15
4.4.1	Control Patterns for each Process with their respective FSM representation.	16
<b>Chapter 5</b>	<b>Complete FSM representation of 'hospital management'</b>	21
<b>Chapter 6</b>	<b>Web Services</b>	22
6.1	SOA (Service Oriented Architecture)	22
6.2	Orchestration and Choreography	23
6.3	WSDL	23
6.4	BPEL for Service Composition	23
6.4.1	BPEL Features	24
6.4.2	Executable and Abstract Processes	24

6.4.3 BPEL Servers	24
<b>Chapter 7 Service Composition with BPEL</b>	
7.1 Introduction	25
7.2 Invoking Web Services	26
7.3 Response by Synchronous/Asynchronous Business Processes to clients	27
7.4 BPEL Process Tag	28
7.5 Partner Links	28
7.5.1 Defining Partner Links	29
7.5.2 Partner Link Types	30
7.6 Variables	31
7.6.1 Assignments	32
7.6.2 Reading from variables	33
7.7 Basic Activities(<invoke>, <receive>, and <reply>)	33
7.8 Structured activities	35
<b>Chapter 8 Implementation details</b>	37
<b>Chapter 9 Conclusion and future work</b>	41
<b>REFERENCES</b>	42
<b>APPENDIX</b>	43
