

Stock Broker Portal

Abstract

In current scenario we are having lot of online trading portals but all these portals are providing communication between organization people and stock brokers but they are not providing any interface between organizations to customers so that no customer can view their own information. This is the main disadvantage, to tackle this problem we have introduced a web application called “Stock Broker Portal”.

Stock Broker Portal is a web application which is used for maintaining stock trading information. This application consist all different company's shares list and customers list who are handling major transactions like purchasing and selling of shares. Public can get registered here and can purchase or sale shares through this portal. It provides interface for both 'Stock Exchange Employee' and share holders.

There exist aware and unaware investors to share market, for market aware investors this portal opens direct communication to live market and for unaware investors they can have service via broker on this portal.

The Online Trading application called 'Stock Broker Portal' is a new access by the trading public to low-cost transactions and cutting-edge, real-time market information that formerly belonged only to brokers has opened up extraordinary new investment opportunities as well as a crucial need for state-of-the-art information. It is exactly to make easy access to new market investment service that Online Shares Brokers specializes in satisfying their customers.
