

ABSTRACT

“Tezpur University Stock Management System” is a web based database system which is developed keeping in mind the manual system of providing and maintaining various stock (e.g. computer systems in laboratories, basic needs property in hostels etc.) in Tezpur University. The main motto behind is to develop a software for the relevant authority of the University so that the authorized individual can operate it to keep information and track of each single item in the university premises and update information whenever required.

It is a web based development, implemented on windows platform. Web server we used is Apache, database server is MySQL, and scripting languages are PHP and JavaScript.
