

ABSTRACT

The title of the project is “**TRAINING AND PLACEMENT CELL**”. This project is done in computer centre of Tezpur University. The sole purpose of this project is to reduce the manual process done during placement in this university. The application can be accessed within the university and also outside the university with proper login process.

The application is used by the university final year students and they can register in the system with their enrollment number. After that they can login in the system and can update his/her personal details, academic details and other skills which are shown to the company as CV.

Students can see all upcoming jobs offered by the companies and if he/she meets the eligibility criteria then they can apply in the job. Students once placed in a company can't apply for another job according placement rules.

Company on the other hand can register in the application by providing company information. After that they can offer job. Company can see all students profile and personal information who have applied for the job. Company after selection process can upload the result sheet.

The T&P cell can login in the system can see all the registered companies and students. Also T&P officers can see all jobs offered by the companies. And they can mail to students who meets the eligibility criteria, so that students can apply in the job. T&P cell can see all placed students according to interview date.
