

ABSTRACT

“Video and Photography Requisition and Backup Management System” is a web based system, the system provide online requisitions facilities for video and photography. The details information about view team and trial team is also kept online in the system which can be used for decision making propose. The system provides backup facilities for video and photos of different trials.

It is required to develop a simple, user friendly and efficient online database system which can be installed in standard machines. The application should be web based and has to be developed using open source technologies as given bellow-

- PHP Scripting.
- MySQL Database.
- Apache Webserver.
- JavaScript.
- Bootstrap framework.

The following are the primary objectives-

- It will serve as an efficient tool for online requisitions.
- Keeps all details about event and flight trials.
- Keeps video and photography backup of event and flight trials.
- Generation of different report for decision making purposes.
