

ABSTRACT

“Social Assistance Programme for Dibrugarh District” is a web based system, comes under NSAP(National Social Assistance Programme) and the prime reason of developing the software is to operate it locally by the relevant authority. It provides the administrator many facilities such as they can take advantages of storing required data, further processing of data for further actions or they can use it as training module. Besides, general users viz. the beneficiaries, NGO etc can view the beneficiary report which is generated once a updation process is compled. All the data such as, bank information, sanctions, discontinuation etc will be stored in database as a track record. The process of functioning of this application starts once the hard copies of duly filled applications forms of the people which are expected to be beneficiaries are reached to the office of the chief Executive Officer, ZILLA Parishad, Dibrugarh and ends in the process of report generating and displaying of the report.

Motivation – Since the NSAP is a relatively huge website, therefore the necessity of a locally operated software was realized so as to use it as training module at times whenever required. Moreover, the availability of the beneficiary report for the common people was also found to be relevant.
