

## List of Tables

<b>Table No.</b>	<b>Title</b>	<b>Page No.</b>
<b>1.1</b>	Examples of genome nomenclature for some common cultivars (with emphasis on cultivars grown in India)	1.1
<b>2.1</b>	Effect of different stages of development on proximate composition of culinary banana	2.10
<b>2.2</b>	Effect of different stages of development on pH, browning potential and titratable acidity of culinary banana	2.11
<b>2.3</b>	Effect of different stages of development on starch, amylose, total soluble (TSS), reducing (RS), non reducing (NRS) sugars and pectin content of culinary banana	2.13
<b>2.4</b>	Effect of different stages of development on tannin and phytic acid content of culinary banana	2.14
<b>2.5</b>	Effect of different stages of development on total polyphenols (TPC), DPPH radical scavenging activity (SA), total carotenoids (TC), vitamin A and thiamine contents of culinary banana	2.15
<b>2.6</b>	Effect of different stages of development on mineral contents of culinary banana	2.17
<b>2.7</b>	Effect of different stages of development on fatty acid profile of culinary banana	2.17
<b>2.8</b>	Effect of different stages of development on amino acid composition of culinary banana	2.18
<b>2.9</b>	Effect of different stages of development on colour measurement of culinary banana	2.23
<b>2.10</b>	Pulp to peel ratio vis-a-vis total soluble sugars of culinary banana	2.23
<b>2.11</b>	Proximate composition at various stages of development of culinary banana peel	2.31
<b>2.12</b>	Starch, amylose and sugar content at different stages of development of culinary banana peel	2.32
<b>2.13</b>	Cellulose, lignin, hemicelluloses, pectin and tannin content of culinary banana peel	2.34
<b>2.14</b>	Total polyphenols, flavonoids and scavenging activity of culinary banana peel	2.35

<b>2.15</b>	Minerals in culinary banana peel	2.37
<b>2.16</b>	Fatty acids in culinary banana peel	2.40
<b>2.17</b>	Effect of maturation on amino acids content in culinary banana peel	2.40
<b>3.1</b>	Chemical compositions of culinary banana starch	3.9
<b>3.2</b>	Water holding capacity, swelling and solubility profile of culinary banana starch	3.11
<b>3.3</b>	Effect of starch concentration and number of autoclaving and cooling cycles on RS content	3.19
<b>3.4</b>	Effect of storage temperature on RS content	3.20
<b>3.5</b>	Chemical compositions of culinary banana RS	3.21
<b>3.6</b>	Brown bread ingredients and combination	3.30
<b>3.7</b>	Chemical composition of fortified brown bread	3.37
<b>3.8</b>	Volume of baked fortified brown bread	3.40
<b>3.9</b>	Texture property of brown bread fortified with RS and KF	3.42
<b>3.10</b>	Colour attributes of fortified brown bread	3.44
<b>3.11</b>	Sensory attributes of fortified brown breads	3.46
<b>4.1</b>	Particle size distribution of cellulose nanofibers (CNFs) observed by TEM	4.12
<b>4.2</b>	Particle size distribution of Cellulose nanopaper (CNP) observed by TEM	4.26
<b>4.3</b>	Crystallinity index and crystallite size of CNP	4.28
<b>4.4</b>	Mechanical properties of CNP	4.39
<b>5.1</b>	Total polyphenols and DPPH radical scavenging activity of cocrystal powders	5.7
<b>5.2</b>	HPLC polyphenol profile of cocrystallized powders	5.9
<b>5.3</b>	Moisture content and water activity ( $a_w$ ) of cocrystal powders	5.9
<b>5.4</b>	Flowability properties of cocrystal powders	5.12
<b>5.5</b>	Colour attributes of cocrystals	5.12
<b>5.6</b>	Hygroscopicity (HG %) of cocrystallized powders at 75 %RH and 20°C	5.22
<b>6.1</b>	Mathematical models used for thin-layer drying of culinary banana	6.5
<b>6.2</b>	Values of model constants for thin-layer drying of culinary	6.12

	banana slices	
<b>6.3</b>	Values of model constants for thin-layer drying of culinary banana peel paste	6.13
<b>6.4</b>	Effective moisture diffusivity, activation energy of culinary banana slices	6.15
<b>6.5</b>	Progressive parameters of Arrhenius relationship between effective diffusivity and absolute temperature	6.17
<b>6.6</b>	Texture, rehydration ratio (RR), non-enzymatic browning (NEB), DPPH scavenging activity (SA) and total phenolic content (TPC) of dried culinary banana pulp	6.21
<b>6.7</b>	Rehydration ratio (RR), non-enzymatic browning (NEB), DPPH scavenging activity (SA) and total phenolic content (TPC) of dried peel	6.21
<b>6.8</b>	ANOVA for experimental results of general factorial design of dried pulp	6.34
<b>6.9</b>	ANOVA for experimental results of general factorial design of dried peel	6.35
<b>6.10</b>	Relative influence of the coded values of independent variables on the responses $Y_{RR}$ , $Y_{SA}$ , $Y_{NEB}$ , $Y_H$ of pulp	6.45
<b>6.11</b>	Relative influence of the coded values of independent variables on the responses $Y_{RR}$ , $Y_{SA}$ , $Y_{NEB}$ of peel	6.45
<b>6.12</b>	Results of optimized values by genetic algorithm	6.46
<b>6.13</b>	Relative deviation between experimental and predicted values of dried pulp	6.49
<b>6.14</b>	Relative deviation between experimental and predicted values of dried peel	6.49
<b>6.15</b>	Equilibrium relative humidities of selected salt solutions at various temperature levels	6.54
<b>6.16</b>	Mathematical models used to fit the equilibrium moisture sorption isotherms of culinary banana flour	6.55
<b>6.17</b>	DPPH radical scavenging activity and total polyphenols during storage	6.57
<b>6.18</b>	Sorption isotherm models and their respective constants and statistical parameters	6.60

---

## List of Figures

Fig. No.	Title	Page No.
1.1	The world banana production scenario (2011)	1.3
1.2	Major banana producing states of India (2010-2011)	1.3
2.1	Culinary banana ( <i>kachkal</i> ) at various stages of development <b>a)</b> 1 DAE (emergence of inflorescence), <b>b)</b> 20 DAE, <b>c)</b> 35 DAE, <b>d)</b> 50 DAE, <b>e)</b> 65 DAE and <b>f)</b> 80 DAE	2.4
2.2a	HPLC chromatograms of polyphenols in 20 DAE (stage I) matured culinary banana pulp	2.20
2.2b	HPLC chromatograms of polyphenols in 35 DAE (stage II) matured culinary banana pulp	2.20
2.2c	HPLC chromatograms of polyphenols in 50 DAE (stage III) matured culinary banana pulp	2.21
2.2d	HPLC chromatograms of polyphenols in 65 DAE (stage IV) matured culinary banana pulp	2.21
2.2e	HPLC chromatograms of polyphenols in 80 DAE (stage V) matured culinary banana pulp	2.22
2.3a	HPLC chromatograms of polyphenols in 20 DAE (stage I) matured culinary banana peel	2.41
2.3b	HPLC chromatograms of polyphenols in 35 DAE (stage II) matured culinary banana peel	2.41
2.3c	HPLC chromatograms of polyphenols in 50 DAE (stage III) matured culinary banana peel	2.42
2.3d	HPLC chromatograms of polyphenols in 65 DAE (stage IV) matured culinary banana peel	2.42
2.3e	HPLC chromatograms of polyphenols in 80 DAE (stage V) matured culinary banana peel	2.43
2.4a	FT-IR spectra of culinary banana peel at 20 DAE (stage I)	2.44
2.4b	FT-IR spectra of culinary banana peel at 35 DAE (stage II)	2.45
2.4c	FT-IR spectra of culinary banana peel at 50 DAE (stage III)	2.45
2.4d	FT-IR spectra of culinary banana peel at 65 DAE (stage IV)	2.46
2.4e	FT-IR spectra of culinary banana peel at 80 DAE (stage V)	2.46
2.5	SEM micrographs of culinary banana peel ( <b>2.5a</b> ): 20 DAE (stage	2.48

	I); <b>(2.5b)</b> : 35 DAE (stage II); <b>(2.5c)</b> : 50 DAE (stage III); <b>(2.5d)</b> : 65 DAE (stage IV); <b>(2.5e)</b> : 80 DAE (stage V)	
<b>2.6a</b>	XRD diffraction pattern of culinary banana peel at 20 DAE (stage I)	2.49
<b>2.6b</b>	XRD diffraction pattern of culinary banana peel at 35 DAE (stage II)	2.49
<b>2.6c</b>	XRD diffraction pattern of culinary banana peel at 50 DAE (stage III)	2.50
<b>2.6d</b>	XRD diffraction pattern of culinary banana peel at 65 DAE (stage IV)	2.50
<b>2.6e</b>	XRD diffraction pattern of culinary banana at 80 DAE (stage V)	2.51
<b>3.1</b>	<b>a)</b> Culinary banana at matured edible stage and, <b>b)</b> starch from culinary banana	3.9
<b>3.2</b>	<b>a)</b> Freeze-thaw stability of culinary banana starch and, <b>b)</b> Pasteclearity of culinary banana starch	3.12
<b>3.3</b>	Pasting properties of culinary banana starch	3.13
<b>3.4</b>	X-ray diffractogram of culinary banana starch	3.14
<b>3.5</b>	FT-IR spectra of culinary banana starch	3.15
<b>3.6</b>	Scanning electron micrograph of culinary banana starch	3.16
<b>3.7</b>	TGA and DTG curves of culinary banana starch	3.17
<b>3.8</b>	Resistant starch (RS) obtained by <b>a)</b> Hydrothermal process and, <b>b)</b> Enzyme debranching	3.19
<b>3.9</b>	Scanning electron micrograph of culinary banana RS <b>a)</b> (RS <sub>10-B</sub> = 10%, -20°C); <b>b)</b> (RS <sub>20-B</sub> = 20%, -20°C) and <b>c)</b> (RS <sub>Ez-B</sub> = 24 h, -20°C)	3.22
<b>3.10</b>	FT-IR spectra of RS obtained after hydrothermal (RS <sub>10-B</sub> = 10%, -20°C and RS <sub>20-B</sub> = 20%, -20°C) and enzyme debranched (RS <sub>Ez-B</sub> = 24 h, -20°C)	3.24
<b>3.11a</b>	TGA and DTG curves of RS obtained after hydrothermal (RS <sub>10-B</sub> = 10%, -20°C)	3.25
<b>3.11b</b>	TGA and DTG curves of RS obtained after hydrothermal (RS <sub>20-B</sub> = 20%, -20°C)	3.26
<b>3.11c</b>	TGA and DTG curves of RS obtained after enzyme debranched	3.26

	(RS <sub>Ez-B</sub> = 24 h, -20°C)	
<b>3.12</b>	Preparation of brown bread fortified with resistant starch (RS) and flour (KF) from culinary banana	3.32
<b>3.13</b>	Fortified brown bread samples	3.38
<b>3.14</b>	Proofing of dough prior to baking	3.39
<b>3.15</b>	Percentage water retention in baked products	3.39
<b>3.16</b>	Relative elasticity of brown bread samples	3.43
<b>4.1</b>	Detailed flow chart for the steps involved in chemical and ultrasonication treatments	4.5
<b>4.2a</b>	Procedure showing gradual discolouration in peel flour occurred during isolation of CNFs	4.9
<b>4.2b</b>	Visual examination on colour change in culinary banana peel flour with advancement in chemical treatment	4.10
<b>4.3</b>	SEM micrographs of <b>(a)</b> culinary banana peel and <b>(b, c, d, e)</b> cellulose nanofibers obtained by ultrasonic treatment at 0W, 400W, 800W and 1000W respectively	4.11
<b>4.4</b>	TEM images of cellulose nanofibers obtained at various ultrasonic treatment <b>(a)</b> 0 W, <b>(b)</b> 400 W, <b>(c)</b> 800 W and <b>(d)</b> 1000 W	4.13
<b>4.5</b>	XRD diffraction pattern of cellulose nanofibers from culinary banana peel	4.14
<b>4.6</b>	FTIR spectra of cellulose nanofibers from culinary banana peel	4.16
<b>4.7</b>	TGA curve of cellulose nanofibers from culinary banana peel	4.17
<b>4.8</b>	Culinary banana, its peel, flour and cellulose obtained after chemical and ultrasonication treatment and developed CNP	4.21
<b>4.9</b>	Photograph of cellulose nanopaper (CNP) <b>(a)</b> during activation period and <b>(b)</b> after drying	4.24
<b>4.10</b>	SEM micrographs of <b>(a)</b> CNP-UT and <b>(b)</b> CNP-T	4.25
<b>4.11</b>	TEM micrographs of <b>(a)</b> CNP-UT and <b>(b)</b> CNP-T	4.27
<b>4.12</b>	XRD diffraction pattern of CNP-UT and CNP-T	4.28
<b>4.13</b>	FTIR spectra of CNP-UT and CNP-T	4.30
<b>4.14a</b>	CP/MAS <sup>13</sup> C NMR spectra of CNP-UT	4.32
<b>4.14b</b>	CP/MAS <sup>13</sup> C NMR spectra of CNP-T	4.33
<b>4.15a</b>	TGA curves of CNP-UT and CNP-T	4.35

<b>4.15b</b>	DGA curves of CNP-UT and CNP-T	4.35
<b>4.16a</b>	Photoluminescence (PL) emission of CNP-UT and CNP-T	4.36
<b>4.16b</b>	UV-visible spectra of CNP-UT and CNP-T	4.37
<b>4.17</b>	Tensile stress-strain curve of <b>(a)</b> CNP-UT and <b>(b)</b> CNP-T	4.38
<b>4.18</b>	Particle size distribution of CNP-UT and CNP-T	4.41
<b>5.1</b>	Loading capacity vs. DPPH scavenging activity of cocrystallized powders	5.7
<b>5.2a</b>	Dissolution kinetics of sucrose cocrystals with and without pulp extracts	5.10
<b>5.2b</b>	Dissolution kinetics of sucrose cocrystals with and without peel extracts	5.11
<b>5.3a</b>	FT-IR spectra of cocrystals encapsulated with pulp extract	5.13
<b>5.3b</b>	FT-IR spectra of cocrystals encapsulated with peel extract	5.14
<b>5.4a</b>	DSC thermographs of cocrystals encapsulated with pulp extract	5.15
<b>5.4b</b>	DSC thermographs of cocrystals encapsulated with peel extract	5.16
<b>5.5a</b>	X-rays diffraction patterns of sucrose cocrystals control (CC-C)	5.17
<b>5.5b</b>	X-rays diffraction patterns of cocrystals encapsulated with 3g pulp extract (CC-PU3)	5.17
<b>5.5c</b>	X-rays diffraction patterns of cocrystals encapsulated with 5g pulp extract (CC-PU5)	5.18
<b>5.5d</b>	X-rays diffraction patterns of cocrystals encapsulated with 10g pulp extract (CC-PU10)	5.18
<b>5.6a</b>	X-rays diffraction patterns of cocrystals encapsulated with 3g peel extract (CC-PE3)	5.19
<b>5.6b</b>	X-rays diffraction patterns of cocrystals encapsulated with 5g peel extract (CC-PE5)	5.19
<b>5.6c</b>	X-rays diffraction patterns of cocrystals encapsulated with 10g peel extract (CC-PE10)	5.20
<b>5.7</b>	SEM micrographs of control and cocrystals entrapped with pulp extract <b>a)</b> CC-C, <b>b)</b> CC-PU3, <b>c)</b> CC-PU5 and <b>d)</b> CC-PU10	5.21
<b>5.8</b>	SEM micrographs of control and cocrystals entrapped with peel extract <b>a)</b> CC-C, <b>b)</b> CC-PE3, <b>c)</b> CC-PE5 and <b>d)</b> CC-PE10	5.21

<b>6.1</b>	Flow chart representing drying characteristics of culinary banana peel and pulp under different drying conditions	6.2
<b>6.2</b>	Schematic diagram of manual slicer (1): movable cutter screw, (2a and 2b): screw adjuster, (3): scale bar, (4): cutting blade, (5): movable cutter handle	6.4
<b>6.3</b>	Schematic diagrams of dryer (1: air and temperature controlling valve, 2: balance, 3: sample holding trays, 4: air outlet, heating mantle, 6: air circulating fan)	6.4
<b>6.4</b>	Moisture ratio vs drying time of <b>(a)</b> culinary banana pulp slices and <b>(b)</b> peel paste	6.10
<b>6.5</b>	Moisture ratio vs drying time in <b>(a)</b> Wang & Singh model in pulp slices and <b>(b)</b> modified Page model peel paste	6.14
<b>6.6a</b>	Variation in $\ln(MR)$ with time (t) of pulp slices	6.15
<b>6.6b</b>	Variation in $\ln(MR)$ with time (t) of peel paste	6.16
<b>6.7</b>	Logarithmic of effective moisture diffusivity vs function of the inverse of absolute temperature (K) of <b>(a)</b> pulp slices and <b>(b)</b> peel paste	6.17
<b>6.8</b>	Scanning electron micrographs of pulp dried at various temperatures	6.18
<b>6.9</b>	Scanning electron micrographs of peel dried at various temperatures	6.19
<b>6.10</b>	Schematic diagram of MLFF ANN	6.27
<b>6.11</b>	Schematic diagram of optimization process of neural network using genetic algorithm	6.30
<b>6.12a</b>	Correlation between experimental and predicted values for rehydration ratio of dried pulp slices	6.38
<b>6.12b</b>	Correlation between experimental and predicted values for scavenging activity dried pulp slices	6.38
<b>6.12c</b>	Correlation between experimental and predicted values for nonenzymatic browning of dried pulp slices	6.39
<b>6.12d</b>	Correlation between experimental and predicted values for hardness of dried pulp slices	6.39
<b>6.13a</b>	Correlation between experimental and predicted values for	6.40

	rehydration ratio of dried peel	
<b>6.13b</b>	Correlation between experimental and predicted values for scavenging activity dried peel	6.40
<b>6.13c</b>	Correlation between experimental and predicted values for nonenzymatic browning of dried peel	6.41
<b>6.14</b>	Scanning electron micrographs pulp dried at various temperatures	6.47
<b>6.15</b>	Scanning electron micrographs of peel dried at various temperatures	6.47
<b>6.16</b>	Moisture sorption isotherm of culinary banana flour at different temperatures	6.58
<b>6.17a</b>	Moisture sorption isotherm predicted by Peleg model at 25°C	6.61
<b>6.17b</b>	Moisture sorption isotherm predicted by Peleg model at 30°C	6.61
<b>6.17c</b>	Moisture sorption isotherm predicted by Peleg model at 35°C	6.62
<b>6.17d</b>	Moisture sorption isotherm predicted by Peleg model at 40°C	6.62
<b>6.17e</b>	Moisture sorption isotherm predicted by Peleg model at 45°C	6.63
<b>6.18</b>	Variation in net isosteric heat of sorption ( $q_{st}$ ) with equilibrium moisture content (EMC)	6.64

---

## List of Abbreviations

---

%	Percentage
$(R_d)_{ANN}$	Mean relative deviation of ANN
$(R_d)_{RSM}$	Mean relative deviation of RMS
$a_w$	Water activity
'u', 'w', 'Th' and 'To'	Matrices of ANN modeling
$\mu\text{m}$	Micrometer
$\text{\AA}$	Degree Angstrom
$a^*$	Redness
A, B, C, K	MSI model constants
a, b, c, k, m, n	Drying model coefficient
a.u.	arbitrary unit
AAA	Amino acid analyzer
abs	Absolute temperature (K)
AMG	Amyloglucosidase
ANN	artificial neural networks
ANOVA	Analysis of variance
b'	Cell path
$b^*$	Yellowness
BV	Breakdown viscosity
CE	Coefficient estimate
CF	Cellulose fiber
$\text{cm}^3$	Centimeter cube
CNF	Cellulose nanofiber
CNP	Cellulose nanopaper
cP	centipoise
CV	coefficient of variation
$D_0$	Pre-exponential factor of the Arrhenius equation ( $\text{m}^2/\text{s}$ )
DAE	days after emergence of banana inflorescence
db	Dry basis
$D_{\text{eff}}$	Effective moisture diffusivity ( $\text{m}^2/\text{s}$ )

DF	Degree of freedom
DLS	Dynamic light scattering
DPPH	2,2 diphenyl 1-picrylhydrazyl
DSC	Differential scanning calorimetry
DTG	Derivative of TGA
$E_a$	Activation factor (kJ/mol)
EMC	Equilibrium moisture content
Eq.	Equation
F	Fitness function
F.C.	Folin-Ciocalteu
FAO	Food and Agriculture Organization of the United Nations
FT-IR	Fourier transform infrared spectroscopy
FV	Final viscosity
g	gram
GA	Genetic algorithm
GAE	Gallic acid equivalents
GI	glycaemic index
GLC	Gas liquid chromatography
GOPOD	Glucose oxidase/oxidase reagent
h	hour
HG	Hygroscopicity
HPLC	High performance liquid chromatography
HV	Hold viscosity
$I_c$	crystallinity index
ICP-OES	inductively coupled plasma optical emission spectrometry
KF	Culinary banana flour
kHz	kilohertz
kv	kilovolt
$L^*$	Lightness
L	Slab thickness (mm)
$L_c$	loading capacity
LSD	Least Significant Difference
M	Molar

mA	milliampere
$M_a$	Average moisture content ( $\text{kg}_{\text{water}}/\text{kg}_{\text{dry matter}}$ )
$M_e$	Equilibrium moisture content ( $\text{kg}_{\text{water}}/\text{kg}_{\text{dry matter}}$ )
$M_i$	Initial moisture content ( $\text{kg}_{\text{water}}/\text{kg}_{\text{dry matter}}$ )
min	minute
ml	milliliter
mm	millimeter
MPa	megapascal
MR	Moisture ratio (dimensionless)
MSI	Moisture sorption isotherm
$M_t$	Moisture content at time t ( $\text{kg}_{\text{water}}/\text{kg}_{\text{dry matter}}$ )
mV	millivolt
N	Normal
N	Newton
ND	Not detected
nm	nanometer
NMR	Nuclear magnetic resonance
NRS	Non reducing sugars
OI	Optical Index
pH	Negative log of hydrogen ions
PL	Photoluminescence
pmol	Picomole
ppm	Parts per million
pps	Points per second
PRESS	Predicted error sum
PT	Pasting temperature
PV	Peak viscosity
$q_{st}$	Net isosteric heat of sorption
R	Ideal gas constant (8.314 kJ/mol)
$R^2$	Coefficient of determination
$R_d$	Mean relative deviation
$R_{EL}$	relative elasticity
RH	Relative humidity

RMSE	Root mean square error
rpm	Revolutions per minute
RS	Reducing sugars
RS	Resistant starch
RSM	Response surface methodology
s	seconds
s.s.	Stainless steel
SA	scavenging activity
SD	Standard deviation
SE	Standard error
SEM	Microstructure Study
SOP	Second order polynomial
SV	Setback viscosity
t	Drying time (min)
T	Drying air temperature (°C)
TC	Total carotenoids
TEM	Transmission electron microscopy
TFC	Total flavonoids content
TGA	Thermogravimetric analysis
TPC	Total polyphenols content
t <sub>R</sub>	Retention time
TSS	Total soluble sugars
UV	Ultra violet
v/v	Volume by volume
W	Watt
w/v	Weight by volume
wb	Wet basis
WHO	World Health Organization
X	Independent variable
X <sub>1</sub>	Optimization drying temperatures
X <sub>2</sub>	Optimization sample slice thickness
X <sub>3</sub>	Optimization pretreatment conditions
XRD	X-ray Diffraction

Y	Dependent variable
Y <sub>H</sub>	Hardness
Y <sub>NEB</sub>	Nonenzymatic browning
Y <sub>RR</sub>	Rehydration ratio
Y <sub>SA</sub>	Scavenging activity
Δy	Computed values of ANN output
θ	Theta
μg/ml	Microgram per milliliter
χ <sup>2</sup>	Chi-square

---
