

TABLE OF CONTENTS

Section	Title	Page no.
Chapter 1	Introduction	1-10
1.1	General background	1-2
1.1.1	Municipal solid waste: problems and perspectives	1-2
1.1.2	Utilization of MSW in agriculture	2-3
1.1.3	Significance of vermitechnology	3-4
1.1.4	Organic inputs and Soil Organic C stock	4-5
1.2	Key questions	5
1.3	Aims and objectives	5-6
1.4	Research plan	6-8
1.5	Thesis organization	8-10
Chapter 2	Review of Literature	11-36
2.1	Introduction	11-15
2.2	MSWs: nature, properties and impacts	15-22
2.3	Environmental impacts of MSW	23-27
2.3.1	Air pollution	24-25
2.3.2	Soil and water pollution	26-27
2.4	Significance of bio-composting technologies as sustainable disposal option	27-31
2.5	Significance of organic inputs: soil health and agricultural sustainability	31-34
2.6	Influence of vermicompost on SOC stock and crop production	34-36

Section	Title	Page no.
Chapter 3 Methodology: Planning of the experiments		37-42
3.1	Characterization of MSW	37-38
3.2	Bioconversion of MSW by <i>Eisenia fetida</i> and <i>Metaphire posthuma</i>	38-39
3.3	Field experiment	39
3.4	Quality assurance and quality control	39-42
3.4.1	Sample storage and preservation	40
3.4.2	Calibration procedures	40
3.4.3	Initial demonstration of performance	40-41
3.4.4	Linear calibration range	41
3.4.5	Method detection limit	41
3.4.6	Instruments and equipments	41-42
	(Operations and maintenance)	
Chapter 4 Characterization of MSW		43-86
4.1	Introduction	43-46
4.2	Materials and methods	46-68
4.2.1	Collection of experimental samples	46-47
4.2.2	Characterization of MSW: proximate and physico-chemical analysis	48-59
4.2.2.1	Proximate analysis	48-49
A.	Moisture content	48
B.	Ash content	48
C.	Volatile Matter	49
D.	Fixed carbon	49

Section	Title	Page no.
4.2.2.2	Physical properties	49-51
	A. Bulk density (BD)	49
	B. Particle density (PD)	50
	C. Porosity	50
	D. Water holding capacity	50-51
4.2.2.3	Chemical properties	52--59
	A. Measurement of soil pH	52
	B. Measurement of electrical conductivity (EC)	52
	C. Cation exchange capacity (CEC)	52-53
	D. Determination of easily mineralizable nitrogen	53-54
	E. Determination of available phosphorus	54-56
	F. Estimation of available potassium	56
	G. Total nitrogen (TN)	56-57
	H. Total organic carbon (%)	57-58
	I. Estimation of micronutrients & toxic metals	58-59
4.2.2.4.	FTIR Spectroscopy	59
4.2.3.	Solubility study and Geochemical model (Visual MINTEQ)	60-65
	Cation analysis(Na ⁺ , K ⁺ , Ca, Zn, etc.)	60
	Anion analysis (Cl ⁻ , SO ₄ ²⁻ , PO ₄ ³⁻ , NO ₃ ⁻)	60-63
	pH	63
	Alkalinity	63-65
4.2.4.	Metal fractionation study of the PTEs	65-67
4.2.5.	Pollution potential and risk assessment	67-68
4.2.6.	Statistical Analysis	68
4.3	Results and discussion	69-86
4.3.1	Waste composition and characterization	69-72
4.3.2	FTIR spectroscopy	72-73
4.3.3	Principal Component and Factor Analysis	74-75

Section	Title	Page no.
4.3.4	Risk evaluation	76-77
4.3.5	Water solubility with Visual MINTEQ analysis	78-83
4.3.6	Bioavailability of fractions of PTEs	84-85
4.4	Conclusion	86
Chapter 5 Bioconversion of Municipal solid waste using		87-109
(<i>M. posthuma</i>) and (<i>E. fetida</i>) earthworm species		
5.1.	Introduction	87-88
5.2.	Materials & methods	89-98
5.2.1.	Sample collection and earthworm selection	89
5.2.2.	Experimental set up	89-90
5.2.3	Study of physico-chemical properties, different fractions of carbon and microbial compositions	90-97
	Microbial biomass carbon	91-92
	Microbial respiration	92-93
	Carbon fractions (Humic acid carbon, HAC; Fulvic acid carbon, FAC and Degree of humification, DOH)	93-95
	Urease activity	95-96
	Phosphatase activity	96-97
	Microbiological study	97
5.2.4	Benefit ratio and metal removal efficiency	98
5.2.5	Statistical analyses	98
5.3	Results and discussion	99-109
5.3.1	Impact of vermicomposting on MBC, MR, bacterial count, and enzymatic activity	99-101
5.3.2	Changes in pH, TOC, HAC, FAC, DOH during vermicomposting and composting	102-104
5.3.3	Changes in CEC and bioavailability of N, P and K	105-106
5.3.4	Bioavailability of heavy metals during biocomposting	107-109
5.4	Conclusion	109

Section	Title	Page no.
Chapter 6	Field study	110-168
6.1	Introduction	110-112
6.2	Materials and methods	112-120
6.2.1	Site description	112
6.2.2	Experimental Design	112-114
6.2.3	Cultivars used and application of organic and inorganic fertilization	113-116
6.2.4	Collection of soil samples from the experimental field	117
6.2.5	Physico-chemical assessment of the soil	117-118
	(A) SOC storage (B) Carbon pool index (CPI)	117-118
	(C) Soil health benefit percentage (SHBP)	
6.2.6	Crop growth and yield assessment	118-120
	(A) Plant morphological parameters (plant ht., leaf no., and tiller no.)	118
	(B) Plant growth attributes (biomass content, CGR, RGR)	118-119
	(C) Biochemical analysis (chlorophyll content)	119-120
	(D) Yield attributes	120
	(E) Yield	120
6.2.6	Statistical analyses	120
6.3	Results and discussion	120-167
6.3.1	Characteristics of the experimental soil	120-121
6.3.2	Effect of different treatments on pH, bulk density (BD) (g cc^{-1}), water holding capacity (WHC)(%),of cultivated soil	120-126
6.3.3	Effect of different treatments on soil organic carbon, SOC (%) and carbon fractions	126-134
6.3.4	Effect of different treatments on microbial biomass carbon ($\mu\text{g g}^{-1}$) and soil respiration ($\mu\text{g g}^{-1}$) of soil under cultivation	135-138
6.3.5	Effect of different treatments on total nitrogen (%), easily mineralizable nitrogen (mg kg^{-1}), urease activity, available phosphorus (mg kg^{-1}), and available potassium (mg kg^{-1}) of cultivated soil	139-149

Section	Title	Page no.
6.3.6	Effect of different treatment combinations on CPI, SOC storage, and SHBP under rice-rice cultivation	150-154
6.3.7	Effect of different treatments on morphological, chlorophyll content and growth attributes	155-164
6.3.8	Effect of different treatments on yield parameters of the crop under rice-rice cultivation	165-167
6.4	Conclusion	168
Chapter 7 Summary		169-171
List of Publications		172
Bibliography		173-201
