1	Introduction	1
1.1	Challenges and Issues in QoS Provisioning in Multi-hop WiLD Networks	4
1.2	Motivation of the Research	5
1.3	Aim of the Thesis	5
1.4	Thesis Contributions	6
1.4.1	2C: A TDMA-based MAC Protocol for Multi-hop WiLD Networks	6
1.4.2	DQBA: A Dynamic QoS-aware Bandwidth Allocation Scheme for Multi-hop WiLD Networks	7
1.4.3	RPS: A Real-time Packet Scheduling Scheme for TDMA MAC	8
1.4.4	QGMR: A QoS-aware Gateway-based Multi-path Routing for Multi-hop WiLD Networks	9
1.5	Thesis Organization	10
2	Literature Survey	13
2.1	Introduction	13
2.2	WiFi-based Long Distance (WiLD) Networks	14
2.3	Envisaged Rural Applications and their QoS Requirements	16
2.4	QoS Provisioning in Multi-hop WiLD Networks	22

2.4.1	QoS at MAC Layer	24
2.4.1.1	MAC Protocols for WiLD Networks and their QoS Support	25
2.4.1.2	Dynamic Bandwidth Allocation Schemes in Multi-hop WiLD Networks	33
2.4.1.3	Packet Level Scheduling in TDMA-based Networks	36
2.4.2	QoS at Network Layer	40
2.4.2.1	Multi-path QoS-aware Routing for Multi-hop WiLD Networks	41
2.5	Conclusion	48
3	2C: A TDMA-based MAC Protocol for Multi-hop WiLD Networks	51
3.1	Introduction	51
3.2	Related Works	53
3.3	Comparison of Existing TDMA-based MAC Protocols for WiLD Networks	54
3.4	The 2C Protocol	54
3.4.1	Protocol Assumptions	56
3.4.2	TDMA Frame Format and Packets Used	57
3.4.3	The Scheduling Algorithm	58
3.4.3.1	Node Synchronization	59
3.4.3.2	An Example Showing Node Synchronization Procedure	59
3.4.3.3	Link Scheduling	60
3.4.3.4	An Example Showing Link Scheduling Procedure	63

3.5	Theoretical Analysis	64
3.5.1	Network Synchronization and Node Joining Time	64
3.5.2	Saturation Throughput	65
3.6	Simulation and Performance Evaluation	67
3.6.1	Performance Metrics and Simulation Parameters	67
3.6.2	Results Analysis	68
3.6.2.1	Optimal TDMA Slot Size	69
3.6.2.2	Throughput and Delay Characteristics	70
3.6.2.3	Network Initialization Overhead	73
3.7	Conclusion	74
4	DQBA: A Dynamic QoS-aware Bandwidth Allocation Scheme for Multi-hop WiLD Networks	77
4.1	Introduction	77
4.2	Related Works	79
4.3	Comparison of Existing Dynamic Bandwidth Allocation Schemes . .	82
4.4	The Proposed Dynamic QoS-aware Bandwidth Allocation Scheme .	82
4.4.1	Protocol Assumptions	83
4.4.2	Frame Structure	85
4.4.3	The Protocol (DQBA)	86
4.4.3.1	Initial Static Slot Allocation	87
4.4.3.2	Dynamic Slot Scheduling	88
4.4.4	An Example Showing the Working of DQBA	92
4.5	Simulation and Performance Evaluation	93

4.5.1	Performance Metrics and Simulation Parameters	93
4.5.2	Throughput and Delay Performance	95
4.5.2.1	With Uniform Traffic Load from all the Sub-trees	95
4.5.2.2	With Skewed Real-time Traffic Load from a single Sub-tree	100
4.6	Conclusion	104
5	RPS: A Real-time Packet Scheduling Scheme for TDMA MAC	107
5.1	Introduction	107
5.2	Related Works	108
5.3	Comparison of Existing Packet Scheduling Schemes	111
5.4	Classification of Traffic	111
5.5	RPS: The Proposed Protocol	112
5.5.1	Two Parameters: I-value and K-value	114
5.5.2	Link-Slot (LS) Localized Admission Control	115
5.5.3	Flow-based Anticipatory Packet Scheduling	117
5.5.4	An Example Showing Packet Scheduling Procedure	119
5.6	Delay Analysis of the Proposed Scheme	120
5.7	Simulation and Performance Evaluation	121
5.7.1	Performance Metrics and Simulation Parameters	122
5.7.2	Results Analysis	123
5.7.2.1	Throughput and Delay Characteristics of the Pro- posed Protocol	123
5.7.2.2	Effect of Queue Size over Delay	124
5.8	Conclusion	126

6 QGMR: A QoS-aware Gateway-based Multi-path Routing Scheme for Multi-hop WiLD Networks	127
6.1 Introduction	127
6.2 Related Works	129
6.3 Comparative Study of Different Multi-path Routing Protocols . . .	132
6.4 The Proposed QoS-aware Gateway-based Multi-path Routing (QGMR) for Multi-hop WiLD Networks	133
6.4.1 Routing Metrics Used	136
6.4.1.1 Expected Path Bandwidth (EPB)	136
6.4.1.2 End-to-end Delay (E2ED)	138
6.4.2 Tables Used in the Routing Protocol	139
6.4.3 Discovery of Multiple Paths	141
6.4.3.1 Multi-path Route Discovery	141
6.4.3.2 An Example Showing Multi-path Route Discovery Procedure	143
6.4.4 Admission Control and Load Balancing	145
6.4.4.1 Path Selection By Source Node	145
6.4.4.2 Admission Control	146
6.4.4.3 Load Balancing	147
6.4.4.4 An Example Showing the Working of Admission Control Mechanism	149
6.4.5 Maintenance of Multiple Paths	150
6.4.5.1 Multi-Path Route Maintenance	150
6.4.5.2 An Example Showing Multi-path Route Maintenance Procedure	152

6.5	Simulation and Performance Evaluation	153
6.5.1	Performance Metrics and Simulation Parameters	154
6.5.2	Results Analysis	155
6.5.2.1	Control Overhead of QGMR and AOMDV	155
6.5.2.2	Throughput and Delay Characteristics of QGMR and AOMDV	157
6.5.2.3	Throughput Characteristics of QGMR and AOMDV in Path Failure Situation	158
6.6	Conclusion	161
7	Conclusion and Future Direction	163
7.1	Conclusion	163
7.1.1	TDMA-based Scheduling	164
7.1.2	QoS-aware Dynamic Bandwidth Allocation	165
7.1.3	Fine-granular QoS Provisioning	165
7.1.4	End-to-end QoS Provisioning	165
7.2	Future Direction	166
	Bibliography	169
	Publications based on the Thesis Works	183
