

## List of Tables

---

<b>Chapter</b>	<b>Table</b>	<b>Title</b>	<b>Page No.</b>
<b>3</b>	3.1	Biosensor recovery study	64
	3.2	Comparison of the different parameters of the sensor with the surface immobilized PPy-AChE sensors.	64
	3.3	Comparison of the analytic performance of the sensor with few of the contemporary AChE sensors when applied to the same analyte.	65
<b>4</b>	4.1	Effect of potential on kinetic parameters and on LODs	77
	4.2	Effect of preconcentration on kinetic parameters and LODs	78
	4.3	LODs of thiocholine obtained during low potential oxidation under different methods. Response characteristics of thiocholine on different electrochemical transducers	82
	4.4	Correlation of concentration in segment 1	84
	4.5	Correlation of concentration in segment 2	85
	4.6	Correlation of concentration in segment 3	86
<b>5</b>	5.1	Correlation of concentration in segment 1	102
	5.2	Correlation of concentration in segment 2	103
	5.3	Correlation of concentration in segment 3	104
	5.4	Recovery of ethion using biosensor in the QET method	108
	5.5	Comparison of recovery from QET method by biosensor and by GC.	108

# List of figures

Chapter	Figure	Title	Page No.
1	1.1	Four different immobilization techniques.	7
	1.2	Schematic representation of an electrochemical biosensor.	8
	1.3	Generation wise biosensor design. (A) First generation biosensor, (B) Second generation biosensor and (C) Third generation biosensor.	10
	1.4	Structure of some conducting polymers.	11
	1.5	Structure of polypyrrole.	11
	1.6	Schematic representation of AChE binding sites.	15
	1.7	Structure of acetylcholine.	16
	1.8	Pesticide inhibition.	20
	1.9	The general formula of OPs. 'X' represents the leaving group. R <sub>1</sub> and R <sub>2</sub> , the side, normally alkoxy group	21
	1.10	The general formula of OCs	22
2	2.1	Chemical structure of some reagents used in this study.	42-43
3	3.1	SEM images of (A) PPy film (B) AChE doped PPy film (C) PPy-AChE-Geltn <sup>1</sup> -Glut <sup>2</sup> film.	48
	3.2	Cyclic voltammograms at scan rate 20 mV/s of (a) Pt electrode in PBS (b) sensor in 2 mM ATChCl (c) sensor in PBS (d) Pt-PPy-Geltn-Glut electrode in 2 mM ATChCl (e) Pt-PPy-AChE electrode in 2 mM ATChCl. (f) Pt electrode in ATChCl (g) Pt-PPy electrode in 2 mM ATChCl. <i>Inset: Fig. 2e.</i>	49

	3.3	Cyclic voltammograms of the sensor in 2 mM ATChCl at different scan rates. (a) 1 mV/s (b) 5 mV/s (c) 8 mV/s (d) 10 mV/s (e) 20 mV/s. <i>Inset I:</i> Fig.3.3a; <i>Inset II:</i> Scan rate vs. peak current.	50
	3.4	Cyclic voltammograms of Pt-PPy-AChE electrode in varying amount of ATChCl at scan rate 1 mV/s, in the potential range from -1 V to 1 V. (a) 50 $\mu$ L (b) 100 $\mu$ L (c) 150 $\mu$ L (d) 200 $\mu$ L (e) 250 $\mu$ L . ATChCl stock solution 0.03M, cycle sweep 3.	51
	3.5	Cyclic Voltammetric behaviour of the chloride doped PPy film towards 2mM ATChCl. (a) Doped with 0.02 M KCl (b) doped with 0.05 M KCl (c) doped with 0.1 M KCl	52
	3.6	Variation of sensor response with substrate concentration when the enzyme loading was 0.5U. <i>Inset:</i> Linewaver–Burk plot for determination of $K_m^{app}$	53
	3.7	Variation of sensor response with substrate concentration measured in presence of externally added enzyme (0.5U). <i>Inset:</i> Linewaver-Burkplot for determination of $K_m^{app}$	54
	3.8	Effect of enzyme loading on sensor response when enzyme loading was (a) 1 $\mu$ L (b) 5 $\mu$ L (c) 10 $\mu$ L (d) 25 $\mu$ L (e) 50 $\mu$ L. Scan rate 20 mV/s.	55
	3.9	Effect of pH on the cyclic voltammetric behaviour of the sensor towards 2 mM ATChCl when enzyme loading was 0.5U, and scan rate 20 mV/s. (a) pH 7.8 (b) pH 7.4 (c) pH 7.2 (d) pH 7.0 (e) pH 6.8 (f) pH 6.4.	56

	3.10	Plot of peak current versus solution pH.	56
	3.11	Chronoamperometric response of the sensor towards: (a) 200 $\mu$ L KCl (0.05 M) in PBS (b) 2 mM TChCl (c) 2 mM ATChCl after incubation for 30 minutes in a 60 ppb paraoxon solution	57
	3.12	Real time monitoring of sensor response. (a) 2 mM ATChCl was added at 300s (b) 2 Mm ATChCl at 300s followed by 200 $\mu$ L 100 ppb paraoxon at 700s	58
	3.13	Effect of incubation time and concentration of inhibitor on the activity of the immobilized enzyme; bold lines (a) 12.5 ppb (b) 60 ppb (c) 150 ppb and (d) 250 ppb of paraoxon, dotted lines (e) 5 ppb (f) 25 ppb (g) 60 ppb and (h) 100 ppb of carbofuran	59
	3.14	Repeated sensor response to 2 mM ATChCl (a) in absence of inhibitor (b) in presence of 60 ppb paraoxon solution (c) in presence of 60 ppb carbofuran solution.	59
	3.15	Sensor response to 2.0 Mm ATChCl in presence of 5% acetonitrile in PBS at each 30 minutes interval	62
	3.16	Calibration plot. (A) paraoxon in PB (B) Carbofuran in 5% acetonitrile. <i>Inset</i> : The expanded plot of the lower ranges.	62
<b>4</b>	4.1	Curves b through d, continuous cyclic voltammetric runs in (2.0 mM) ATChCl – PB mixture at scan rate 1 mV /s using Pt-PPy-AChE-Glut-Geltn electrode. Curve a, the same in PBS.	71
	4.2	Chronoamperometric current transient due to thiocholine (TCh) and acetylthiocholine (ATCh)	72

		<p>at 0.7 V and 0.2V under various conditions.</p> <p>A.under preconcentration condition in which a. TCh oxidation at 0.7 V, b. ATCh-PB charge transfer current at 0.7 V, c. TCh oxidation at 0.2 V d. ATCh-PB charge transfer current at 0.2 V.</p> <p>B. same as above under normal (non-preconcentrated) condition. C and D for repetition of above experiment A with non-enzyme electrode and deactivated enzyme electrode respectively.</p>	
	4.3	<p>Cyclic voltammograms of TCh and ATCh solution using Pt-PPy-Glut-Gel electrode scan rate of 10mV/s. Curve b is the CV of (2.0 mM) ATCh, curve c is the CV of (2.0 mM) TCh and curve a is the same in PBS</p>	73
	4.4	<p>Effect of preconcentration time on the CA current. A. Curves a-h are the CAs of (2.0 mM) ATChCl solution using enzyme electrode for different preconcentration time. B. expanded CA plots to show the effect of preconcentration time on the peak shape C. the plot of preconcentration time vs. current while recording the later at the end of the CAs, and D. the same when recorded at the current transient.CA parameters used were <math>E_0 = -0.8</math> V, <math>E_1 = 0.7</math> V, <math>t_0</math> variable, <math>t_1 = 300</math> s</p>	75
	4.5	<p>Plot of preconcentration potentials vs peak currents when a constant preconcentration time of 180 s was applied during CA experiment. CA parameters used were <math>E_0</math> variable, <math>E_0 = 0.7</math> V, <math>t_0 = 180</math> s, <math>t_1 = 300</math> s</p>	76

	4.6	Michealis-Menteen plots under normal and preconcentration conditions with a fixed amount (10 $\mu$ L ) of enzyme loading. Parameters are (A) $E_0= 0.0$ V: $t_0=60$ s: $E_1= 0.7$ V : $t_1=10$ s (B-D) $t_0=180$ s, $E_0= - 0.8$ V, $t_1=10$ s and $E_1=0.2, 0.4$ and $0.7$ V, respectively.	77
	4.7	Sensor response for successive addition of (50 $\mu$ l 2 mM) acetylthiocholine solution.	79
	4.8	Operational stability of the sensor at 0.2 V. Figure contains fifty continuous CA runs in ATChCl with R.S.D 3.28%.	79
	4.9	Calibration curves for ethion at different chronoamperometric conditions. Parameters are (A-C): $E_0=-0.8$ V $t_0=180$ s, $t_0=10$ s and $E_1=0.2, 0.4$ and $0.7$ V respectively. D. $E_0= 0.0$ V $t_0= 60$ s, $t_1=10$ s.	80
	4.10	Incubation time vs. % residual activity plots with 20 ppb ethion solution.	80
	4.11	Calibration curves for ethion at two different CA conditions. Parameters are A: $E_0= 0.0$ V $t_0= 60$ s, $t_1=10$ s, $E_1= 0.7$ V and B: $E_0= -0.8$ V, $t_0= 180$ s, $t_1=10$ s, $E_1= 0.4$ V	82
	4.12	Segment 1 of Fig.4.11 before regression : a' b b' A- 0.3 to 1.8 ppb, B- 0.5 to 2 ppb, I%= 10.2 to 17.0	83
	4.13	Segment 1 of Fig.4.11 after regression.	83
	4.14	plot of Common Concentration vs Shifted Concentration of B on curve A for segment 1	83
	4.15	Segment 2 of Fig. 4.11 before regression: b' b' c' c' A= 1.8 to 5ppb, B- 2 to 10 ppb, I%= 17 to 26	84
	4.16	Segment 2 of Fig.4.11 after regression	84
	4.17	plot of Common Concentration vs. Shifted Concentration of B on curve A for segment 2	85
	4.18	Segment 3 of Fig. 4.11 before regression c' c' d' d':	85

		A= 5 to 40ppb, B- 10 to 40 ppb, I%= 26 to 43	
	4.19	Segment 3 of Fig.4.11 after regression	86
	4.20	plot of Common Concentration vs. Shifted Concentration of B on curve A for segment 3	86
<b>5</b>	5.1	Two different states of lipase treated ethyl acetate. A. Snap shot taken immediately after mixing, B. after 8 h.	92
	5.2	FT-IR spectra of Pure ethyl acetate (A), anhydrous sodium sulphate treated TM <sub>17</sub> (B), L-Serine(C) and anhydrous sodium sulphate treated TM <sub>17</sub> with L-Serine (D).	96
	5.3	Effect of pure ethyl acetate on the CA response of AChE biosensor.	97
	5.4	Inhibitory effect of different components of the transformed mixture in presence and absence of pesticide on the activity of the immobilized enzyme. A. TM <sub>17</sub> with L-serine. B. TM <sub>17</sub> with ethion. C. TM <sub>17</sub> with L-serine and ethion. D. TM <sub>17</sub> of QET with added L-serine. In each case, a represent CA response of the sensor to 2.0 milli molar ATChCl before incubation in the solution, b represents the same after 1 h incubation in the same solution.	98
	5.5	Inhibitory effect of different components of the transformed mixture in presence and absence of pesticide on the activity of the immobilized enzyme. A. TM <sub>17</sub> with ethion. B. TM <sub>17</sub> with L-serine and ethion. C. TM <sub>17</sub> with L-serine. In each case, a represent CV obtained in 2.0 milli molar ATChCl PB mixture before incubation of the sensor in the solution concerned, b represents the same after 1 h incubation in the	99

		solution.	
	5.6	Calibration curves of ethion by two different biosensing methods A- ethion standard solutions prepared in 5% acetonitrile. B-ethion standard solution prepared in acetonitrile converted to 'TM17 with L-serine' through QET. CA parameters $E_0= 0.0$ V, $t_0= 60.0$ sec, $E_1= 0.7$ V, $t_1= 20$ sec.	100
	5.7	Segment 1 of Fig.5.6 before regression: a' b b' A- 0.3 to 2 ppb, B- 2 to 5 ppb, I%= 10.0 to 20	101
	5.8	Segment 1 of Fig.5.6 after regression.	101
	5.9	plot of Common Concentration vs Shifted Concentration of B on curve A for segment	101
	5.10	Segment 2 of Fig. 5.6 before regression: b' b' c c' A= 2.5 to 5 ppb, B- 5 to 15.6 ppb, I%= 20 to 26	102
	5.11	Segment 2 of Fig.5.6 after regression	102
	5.12	plot of Common Concentration vs Shifted Concentration of B on curve A for segment 2	103
	5.13	Segment 2 of Fig. 5.6 after regression : c c' d d' A= 5 to 40 ppb B- 15.6 to 50 ppb, I%= 26 to 46	103
	5.14	plot of Common Concentration vs Shifted Concentration of B on curve A for segment 3	104
	5.15	Gas Chromatogram of 20 ppb ethion	107
	5.16	Gas Chromatogram of 50 ppb ethion	106
	5.17	Gas chromatogram of 100 ppb ethion	106
	5.18	Gas chromatogram of 150 ppb ethion	107
	5.19	Gas chromatogram of 200 ppb ethion	107

## List of schemes

---

Chapter	Scheme	Title	Page No.
<b>1</b>	Scheme1.1	Michalies-Menten mechanism	2
	Scheme1.2	Synthesis of ACh	16
	Scheme1.3	The role of AChE in cholinergic transmission	17
	Scheme1.4	Catalytic hydrolysis of ACh in presence of AChE	18
	Scheme1.5	Mechanism of hydrolysis of ACh by acetylcholinesterase	18
	Scheme1.6	Hydrolysis reaction of Acetylthiocholine in presence of AChE	19
	Scheme1.7	Thiocholine anodic oxidation	20
	Scheme1.8	The effect of an electron-withdrawing substituent on the reactivity of paraoxon	23
	Scheme1.9	Organophosphate Pesticide inhibition mechanism	23
<b>4</b>	Scheme 4.1	Michalies-Menten mechanism	78

## Abbreviations used in the thesis

A	Ampere
ACh	Acetylcholine
AChE	Acetylcholinesterase
AChE*	Deactivated acetylcholinesterase
Ag/AgCl	Saturated Silver/ Silver chloride reference electrode
Ar%	Percent Residual Activity
ATChCl	Acetylthiocholine chloride
ATChI	Acetylthiocholine Iodide
Au	Gold
BSA	Bovine Serum Albumin
<sup>0</sup> C	Degrees celcius
cm	Centimetre
CA	Chronoamperometry
CV	Cyclic Voltammetry
DTNB	5, 5'-dithiobis (2-nitrobenzoic acid)
En	Enzyme
ET	Electron transfer
Fig.	Figure
FTIR	Fourier Transformed Infra-Red
g	Gram
gdl <sup>-1</sup>	Gram per decilitre
GC	Gas Chromatography
Gel	Gelatin
Glu	Gluteraldehyde
GOX	Glucose Oxidase
I	Current
I %	Inhibition degree or percentage inhibition
I <sub>max</sub>	Maximum current
$K_m^{app}$	Apparent Michaelis-Menten constant
KCl	Potassium Chloride
LOD	Limit of Detection
Log P	Logarithm of the partition coefficient

M	Molar
mL	Mililitre
mA/M	Miliampere per mole
mM	Millimole
mmolL <sup>-1</sup>	Millimole per litre
mV/s	mille volt per second
NaF	Sodium Fluoride
OCs	Organocarbamates
OPs	Organophosphates
PANI	Polyaniline
PBS	Phosphate Buffer Saline
ppb	Parts per Billion
PPy	Polypyrrole
Pt	Platinum
pH	Acidity or alkalinity of a solution
QET	QuECHERS tandem ethyl aceate transformation
QuEChER	Quick, Easy, Cheap, Rugged, Safe
rpm	Rate per minute
RSD	Relative Standard Deviation
S	Second
S	Substrate
SEM	Scanning Electron Miscroscope
T	Temperature
t	time
TM	Transformed mixture
U	Enzyme unit
UV-VIS	Ultra Violet Visible
V	Volt
V <sub>max</sub>	Maximal rate
WHO	World Health Organization
