ABSTRACT	i--ix
DECLARATION	x
CERTIFICATE OF THE SUPERVISOR	xi
CERTIFICATE OF THE EXAMINER	xii
ACKNOWLEDGEMENTS	xiii--xiv
ABBREVIATIONS / SYMBOLS USED	xv--xvi
Chapter 1 Introduction and review of literature	1.1--1.84
1.1. General introduction	
1.2. General methodologies for the preparation of acridine, xanthene and naphthoxazine derivatives	
1.3. Reported methods for the synthesis of -SO ₃ H functionalized ionic liquid systems	
1.4. Review of one-pot synthesis of 1,8-dioxodecahydroacridine, polyhydrobenzoacridine and dibenzoacridine derivatives	
1.5. Review of ionic liquid mediated/catalyzed synthesis of 14-substituted-14 <i>H</i> -dibenzo[a,j]xanthene and tetrahydro benzo[a]-xanthene-11-one derivatives	
1.6. Literature review for one-pot synthesis of [1,3]-naphthoxazine derivatives	
Chapter 2 Investigation of 1, 3-disulfonic acid imidazolium carboxylate ionic liquids as task-specific Brønsted acidic catalysts for one-pot synthesis of 1,8-dioxodecahydroacridine and 14-substituted-14<i>H</i>-dibenzo[a,j]xanthene derivatives	2.1--2.18
2.1. Introduction	
2.2. Results and Discussion	
2.3. Conclusion	
2.4. Experimental Section	

Chapter 3A	Studies on acid catalyzed multicomponent synthesis of <i>anti</i>-2, 3-dihydro-1, 2, 3-trisubstituted-1<i>H</i>-naphth[1, 2-e][1,3]oxazine derivatives as single diastereomer	3A.1--3A.13
	3A.1. Introduction	
	3A.2. Results and Discussion	
	3A.3. Conclusion	
	3A.4. Experimental section	
Chapter 3B	Development of environmentally benign Brønsted acidic catalytic system for multicomponent synthesis of <i>anti</i>-2,3-dihydro-1,2,3-trisubstituted-1<i>H</i>-naphth[1,2-e][1,3]oxazines	3B.1--3B.9
	3B.1. Introduction	
	3B.2. Results and Discussion	
	3B.3. Conclusion	
	3B.4. Experimental section	
Chapter 3C	Exploration of triphenylsulfophosphonium chlorometallates as heterogeneous catalyst for the synthesis 1, 2, 3-trisubstituted naphthoxazines	3C.1--3C.19
	3C.1. Introduction	
	3C.2. Results and Discussions	
	3C.3. Conclusion	
	3C.4. Experimental Section	
	Spectral data of naphthoxazine derivatives	3.i—3.viii
Chapter 4	Evaluation of N, N-disulfo-1, 1, 3, 3-tetramethylguanidinium carboxylate ionic liquids as reusable homogeneous catalysts for multicomponent synthesis of tetrahydrobenzo[a]xanthenone and tetrahydrobenzo[a]acridinone derivatives	4.1--4.20
	4.1. Introduction	

	4.2. Results and Discussion	
	4.3. Conclusion	
	4.4. Experimental Section	
Chapter 5	Diethyl disulfo-ammonium chlorometallates: A novel and reusable heterogeneous acidic catalyst for the multicomponent synthesis of 14-aryl-7-(N-phenyl)-14<i>H</i>-dibenzo[<i>a,j</i>]acridine derivatives	5.1--5.19
	5.1. Introduction	
	5.2. Results and Discussion	
	5.3. Conclusion	
	5.4. Experimental Section	
Chapter 6	Summary and future scopes of the present work	6.1--6.4
	6.1 Summary of the work	
	6.2. Future scopes of the present work	
Annexure	Selected NMR spectra of synthesized heterocycles	S.1--S.12
