

Contents

1	Introduction	1
1.1	Active Galactic Nuclei	1
1.1.1	Classification of AGN	3
1.1.2	Unification Scheme	6
1.1.3	Accretion	9
1.1.4	Spectral Energy Distribution	11
1.1.5	X-Ray Variability of AGN	14
1.1.6	Multi-Wavelength Study	16
1.1.7	Current Studies on Variability	17
1.2	Interstellar Medium	18
1.2.1	Composition	19
1.2.2	The Phase Structure of the ISM	19
1.2.3	Dust	24
1.2.4	Magnetic Field	25
1.2.5	Cosmic Ray	26
1.2.6	Physical Processes in the ISM	27
1.2.7	Current Studies on Hot Ionised Gas	28
2	Instrumentation and Data Analysis	30
2.1	The <i>XMM-Newton</i> Observatory	30
2.1.1	The Scientific Instrumentation	30
2.1.2	The EPIC Cameras	31
2.1.3	The Reflection Grating Spectrometer (RGS)	33
2.1.4	The Optical Monitor (OM)	34
2.1.5	<i>XMM-Newton</i> Data Access	36

2.1.6	Reduction of <i>XMM-Newton</i> Data Files	37
2.2	Far Ultraviolet Spectroscopic Explorer	38
2.2.1	<i>FUSE</i> Configuration	38
2.2.2	Data Reduction	40
3	Variation of Γ with λ_{Edd}	43
3.1	Introduction	43
3.2	Correlation Between Γ and Eddington Ratio	44
3.3	NLS1 Galaxy	45
3.4	Object Selection	46
3.4.1	Mrk 335	47
3.4.2	Ark 564	49
3.5	Data Reduction	51
3.6	Phenomenological Model	53
3.6.1	The Effect of Absorption and Reflection	60
3.7	Flux Resolved Spectroscopy	65
3.7.1	Eddington Ratio	66
3.8	Results	70
3.9	Discussion	72
3.10	Summary	75
4	O VI Absorption in the Milky Way	76
4.1	Introduction	76
4.2	O VI in the Milky Way	77
4.3	Observations and Data Reduction	78
4.3.1	Continuum and Contamination	79
4.3.2	Apparent Optical Depth Measurements	82
4.4	O VI Column Density	83
4.4.1	Comparison with the LMC and the SMC	94
4.4.2	Fe II absorption and Kinematic Properties of O VI	95
4.4.3	Doppler Parameter	103
4.4.4	O VI Column Density and Angular Variation	105
4.4.5	Scale height	109

4.5	Summary and Conclusion	110
5	Summary and Conclusions	112
5.1	Summary of AGN Study	112
5.2	Summary of O VI Study	113
