

## Contents:

1. Introduction
2. Chapter 1----- Trajectory
  - 1.1 Physics of Trajectories
3. Chapter 2----- Alpha Centauri
4. Chapter 3----- Central Force Motion
  - 3.1 Keplers Law
5. Chapter 4----- Projectile Motion
  - 4.1 Some analysis associated with a projectile
6. Chapter 5----- Gravitational Force
  - 5.1 Small masses close to the surface of the earth
7. Chapter 6-----Satellite Orbits
  - 6.1 Orbital Mechanics
  - 6.2 The Geostationary Orbit
  - 6.3 Orbital Elements
8. Chapter 7-----Mathematical Treatment 1
  - 7.1 Calculation
9. Chapter 8-----Generalized Co-ordinate
  - 8.1 How to choose a suitable set of gene co-ord in a given situation
  - 8.2 Notation for gene co-ord
  - 8.3 The rule to construct a Lagrange's equation
10. Chapter 9-----Mathematical Treatment 2
  - 9.1 Application of Numerical technique on the growth of celestial mechanics:
11. Chapter 10-----Runge-Kutta algorithm
  - 10.1 Multi variable Runge-Kutta algorithm
  - 10.2 Time as a variable
12. Chapter 11-----Mathematical Treatment 3
13. Chapter 12-----Programming with C-language
14. Chapter 13----- Results
15. References.
