

CONTENTS

CHAPTER I : INTRODUCTION

1.1 Introduction

1.2 Strip type transmission lines.

1.3 Microstrip line.

(A) Geometry of microstrip transmission lines.

(B) Quasi TEM mode of propagation.

(C) Characteristic of microstrip transmission lines.

CHAPTER II : DESIGN AND FABRICATION OF MICROSTRIP LINE

2.1 Introduction.

2.2 Static transverse electromagnetic parameters.

2.3 Design equation of microstrip line.

2.4 Design parameters for microstrip line

CHAPTER III : MATERIAL SELECTION AND COMPOSITE – PREPARATION TECHNIQUE

3.1 Introduction.

3.2 Polyethylene.

3.2.1 Low density polyethylene

3.3 Why LDPE

3.4 Some basic properties of the polymers and fillers

3.5 weight mixing ratio of dielectric and magnetic composite material

3.6 Material preparation technique for LDPE composite

3.7 Flowchart for material preparation

CHAPTER IV :MORPHOLOGICAL, PHYSICAL, THERMAL AND IR STUDIES ON THE LDPE-Fe-Ti POLYMER COMPOSITES

4.1 Introduction

4.2 Optical micrographs.

4.3 XRD studies.

4.4 Density and water absorbance studies.

4.5 FTIR studies and discussion on FTIR

4.6 Thermal conductivity measurement.

4.7 Discussion

CHAPTER V : MICROWAVE CHARACTERIZATION

5.1 Introduction.

5.2 Microwave measurement set up

5.2.1 Microwave source

5.2.2 Microwave bench

5.3 Techniques for Measurement of Complex Permittivity

5.3.1 Cavity resonator technique

5.3.2 Q factor measurement of the cavity

5.3.3 Complex permittivity measurement

5.4 Experimental determination of Q and ϵ' .
