Abstract	iii
Declaration	vii
Certificate	ix
Acknowledgements	xi
Dedication	xiii
Contents	xv
List of Tables	xxi
List of Figures	xxiii
Nomenclature	xxvii
1 Introduction	1
1.1 Fins for heat transfer enhancement	1
1.2 Thermal stress induced in fins	2
1.3 Fin array	3

1.4	Multi-objective optimization in fin Design	4
1.5	Aim of the thesis	4
1.6	Outline of the thesis	5
2	Literature review	7
2.1	Annular fins for heat transfer enhancement	8
2.2	Thermal stress in annular fins	9
2.3	Optimization of isolated annular fin	10
2.4	Optimization of annular fin array	11
2.5	Motivation for the present research	11
3	Optimization of isolated annular fin	13
3.1	Stepped fin	14
3.1.1	Formulation for heat transfer equation	14
3.1.2	Optimization modeling	17
3.1.3	Solution procedure	18
3.1.4	Numerical experimentation and discussion	20
3.1.5	Sensitivity analysis	25
3.2	Fin with linearly varying thickness	27
3.2.1	Formulation for heat transfer equation	28
3.2.2	Formulation of the thermal stress model	29
3.2.3	Optimization modeling	31
3.2.4	Solution procedure	33

3.2.5	Numerical experimentation and discussion	36
3.2.6	Sensitivity analysis	39
3.3	Fin of non-linearly varying thickness	41
3.3.1	Formulation for heat transfer equation	41
3.3.2	Formulation of the thermal stress model	42
3.3.3	Optimization modeling	42
3.3.4	Solution procedure	44
3.3.5	Numerical experimentation and discussion	44
3.4	Comparison of different fins	48
3.4.1	Common formulation for heat transfer equation	49
3.4.2	Common optimization modeling	49
3.4.3	Solution procedure	52
3.4.4	Numerical experimentation and discussion	53
4	Optimization of annular fin array	57
4.1	Stepped fin array	58
4.1.1	Formulation for heat transfer equation	59
4.1.2	Optimization modeling	61
4.1.3	Solution procedure	63
4.1.4	Numerical experimentation and discussion	65
4.1.5	Sensitivity analysis	69
4.2	Fin array of linearly varying thickness fins	70
4.2.1	Formulation for heat transfer equation	71

4.2.2	Formulation of the thermal stress model	73
4.2.3	Optimization modeling	73
4.2.4	Solution procedure	76
4.2.5	Numerical experimentation and discussion	78
4.2.6	Sensitivity analysis	82
4.3	Fin array of non-linearly varying thickness fins	84
4.3.1	Formulation for heat transfer equation	85
4.3.2	Formulation of the thermal stress model	85
4.3.3	Optimization modeling	85
4.3.4	Solution procedure	88
4.3.5	Numerical experimentation and discussion	89
4.4	Comparison of different fin arrays	94
4.4.1	Common formulation for heat transfer equation	95
4.4.2	Common Optimization modeling	95
4.4.3	Solution procedure	99
4.4.4	Numerical experimentation and discussion	99
5	Conclusions and future research scope	103
5.1	Conclusions	103
5.2	Future research scope	105
	Bibliography	107
A	Techniques for solving the problem	115

A.1	Numerical methods for solving the direct problem	115
A.1.1	Origin of parametric spline	115
A.1.2	The concept of spline difference	117
A.1.3	Concept of hybrid spline	117
A.2	NSGA-II for solving the optimization problem	119
A.2.1	Solution representation and population initialization	119
A.2.2	Solution comparison in multi-objective optimization	120
A.2.3	Working principle of NSGA-II	121
A.2.4	Working steps of NSGA-II in the context of the present study	123
B	Publications	125
B.1	List of publications	125
