Abstract	i
Declaration	iv
Certificate of The Supervisor	v
Acknowledgement	vi
Contents	viii
List of Tables	xiv
List of Figures	xvi
1.0 Introduction	1-6
Bibliography	5
2.0 Review of Literature	7-28
2.1 Rice	7
2.1.1 Nutritional properties and processing of rice	7
2.1.2 Germination of paddy	8
2.1.3 Enzymatic changes during malting	8
2.1.4 Nutritional aspects of germinated rice	9
2.1.5 Health benefits of germinated rice	10
2.1.6 Kinetics of starch hydrolysis	10
2.2 Vibrational spectroscopy	11
2.2.1 Chemometrics	12
2.3 Pasting and thermal properties of malted rice	12
2.4 Weaning formulation	14
2.4.1 Viscosity of gruels/weaning formulation for babies	15
2.4.2 Preparation of commercial weaning formula	16
2.4.3 Preparation of weaning food using traditional technologies	17
2.4.4 Utilization of germinated brown rice	18
2.5 Cytotoxicity test of food samples	18
2.6 Invitro digestibility	19
2.7 Rheology of weaning formulation	19
2.7.1 Rheological characteristics	20
2.7.2 Rheological models	21
2.8 Sorption isotherm	21
2.8.1 Isosteric heat of sorption	23
2.9 Sensory evaluation	24
Bibliography	25

3.0	Materials and Methods	29-60
3.1	Materials	29
3.1.1	Raw Material	29
3.1.2	Chemicals	29
3.1.3	Machineries and Instruments	29
3.2	Work plan pertaining to evaluate the malting characteristics and mechanism of paddy at different germination time and temperature	31
3.2.1	Preparation of raw material and malting of paddy	32
3.2.2	Malting potential of germinated paddy	32
3.2.3	Malting loss and yield of malted brown rice	32
3.2.4	Physico-chemical properties of the malted rice flour	33
3.2.4.1	Physical properties	33
3.2.4.1.1	Bulk and tapped density	33
3.2.4.1.2	Pasting Properties	33
3.2.4.1.3	Thermal behavior	34
3.2.4.1.4	Kinetics of pasting and thermal properties	34
3.2.4.2	Chemical Analysis	35
	Total Starch, Amylose, amylopectin and reducing sugar content	
3.2.5	Enzyme activity determination	35
3.2.5.1	Enzyme Extraction	35
3.2.5.2	Amylolytic and α -amylase activity	35
3.2.6	Morphological and structural analysis	36
3.2.6.1	Scanning Electron Microscopy	36
3.2.6.2	Wide angle X-ray scattering	36
3.2.7	Vibrational spectroscopy	36
3.2.7.1	Raman spectra measurement	36
3.2.7.2	FTIR measurement	36
3.3	Modelling enzyme reaction rate and germination process using ANN approach	37
3.3.1	Theoretical Consideration	37
3.3.2	Estimation of reaction rate during germination	37
3.3.3	Michaelis-Menten Kinetics	38
3.3.4	Stochastic Model	38
3.3.5	Order of reactions	39
3.3.6	ANN Modelling of germination process to predict Reducing sugar formation and Reaction Rate prediction	40
3.4	Weaning formulation based on its physico-chemical and nutritional properties	41

3.4.1	Theoretical consideration	41
3.4.2	Selection of ingredients	41
3.4.3	Modification of ingredients by dry heat treatment	42
3.4.4	Physico-chemical properties of the ingredients	43
3.4.4.1	Determination of energy content and crude protein content	43
3.4.4.2	Pasting properties of the modified ingredients	43
3.4.5	Formulation of weaning food	43
3.4.5.1	Experimental design	43
3.4.5.2	Responses for experimental design	45
	Energy content, Crude protein content, Water solubility index (WSI) and Water absorption index (WAI)	
3.4.5.3	Standardization of the weaning formulation	45
3.4.5.4	Validation	45
3.5	Estimation of solid water ratio of weaning formula and its effect on viscosity	45
3.6	Physico-chemical and cytotoxicity of the optimized weaning formula	46
3.6.1	Hydration property of weaning formulation	46
3.6.2	Bulk and tapped density	46
3.6.3	Flowability and cohesiveness of weaning formula	46
3.6.4	Particle density and porosity of weaning formulation	46
3.6.5	Mineral Analysis	47
3.6.6	Cytotoxicity of the developed weaning formula	48
3.6.6.1	Cell culture	48
3.6.6.2	Cellular toxicity	48
3.7	In vitro starch digestibility and rheological behaviour of weaning formulation in simulated human digestive system	49
3.7.1	Preparation of artificial saliva	49
3.7.2	Preparation of simulated gastric fluid and intestinal fluid	50
3.7.3	In-vitro digestibility in stimulated digestive system	50
3.7.4	Rheological measurement and modelling of weaning food in simulated digestive system	51
3.8	Storage behaviour of weaning formula	51
3.8.1	Moisture sorption isotherm and its thermodynamic properties	52
3.8.1.1	Determination of sorption isotherm	52
3.8.1.2	Modelling of sorption isotherm	52
3.8.1.3	Thermodynamic properties of sorption phenomenon	53
3.8.3	Determination of quality changes in weaning formula	55

3.9	Sensory evaluation	56
3.10	Statistical Analysis	56
3.10.1	Chemometric analysis	56
	Bibliography	57
4.0	Results and Discussion	61-162
4.1	Influence of germination conditions on malting potential of paddy and changes in enzymatic activity and physico-chemical properties	61
4.1.1	Malting potential of rice	61
4.1.1.1	Germination rate, Germination Capacity and Dormancy rate	61
4.1.1.2	Malting yield and malting loss	62
4.1.1.3	Thousand Kernel Weight	65
4.1.2	Enzyme activity	65
4.1.2.1	Total Amylolytic Activity	65
4.1.2.2	Alpha amylase activity	68
4.1.3	Chemical changes during malting	68
4.1.3.1	Total starch content	68
4.1.3.2	Reducing sugar	70
4.1.4	Physical, morphological and structural properties affected by malting	72
4.1.4.1	Bulk and tapped densities	72
4.1.4.2	Morphological changes	72
4.1.4.3	Phase identification by XRD	75
4.2	Modelling of enzyme reaction rate and germination process using ANN approach	77
4.2.1	Estimation of enzyme reaction Rate by Boltzmann function	77
4.2.2	Modelling Michaelis-Menten enzyme kinetics	78
4.2.3	Stochastic Model	80
4.2.4	Process modeling of starch hydrolysis by using the artificial neural network (ANN)	82
4.3	Predicting enzymatic starch hydrolysis mechanism during paddy malting by vibrational spectroscopy and multivariate calibration analysis	87
4.3.1	Time and temperature dependent chemical changes during malting of paddy	87
4.3.2	Starch hydrolysis mechanism during malting by vibrational spectroscopy	88
4.3.2.1	Raman spectroscopy	88
4.3.2.2	FTIR	94
4.3.3	Proposed mechanism of starch hydrolysis	98

4.3.4	Multivariate analysis to correlate changes during malting	99
4.3.4.1	Principle component analysis (PCA)	99
4.3.4.2	Partial least squares (PLS)	102
4.4	Interrelation between pasting properties and thermal behaviour of malted rice	104
4.4.1	Pasting properties	104
4.4.1.1	Pasting temperature	104
4.4.1.2	Peak viscosity	105
4.4.1.3	Hot paste viscosity	108
4.4.1.4	Breakdown viscosity	108
4.4.1.5	Setback viscosity	109
4.4.1.6	Final or cold paste viscosity	109
4.4.2	Thermal behavior	110
4.4.3	Kinetics of pasting properties and thermal behavior	113
4.4.4	Inter-relationships	113
4.5	Optimization of weaning formula based on its physico-chemical and nutritional properties	119
4.5.1	Selection of ingredients for weaning formula	119
4.5.2	Modification of ingredients	119
4.5.3	Effect of roasting on pasting properties of ingredients	120
4.5.4	Formulation of weaning food using D-optimal mixture design	120
4.5.5	Analysis of D-optimal mixture experiment fitting the models	123
4.5.6	Effect of mixing ingredients on responses	124
4.5.7	Standardization of weaning combinations	128
4.5.8	Analysis of optimized weaning formula	129
4.5.8.1	Proximate analysis	129
4.5.8.2	Water holding and binding capacity	131
4.5.8.3	Physical properties	131
4.5.8.4	Mineral analysis	132
4.5.9	Estimation of solid water ratio of the weaning and its effect on viscosity	132
4.6	<i>In-vitro</i> starch digestibility and rheological behavior of weaning formulation in simulated human digestive system	134
4.6.1	<i>In-vitro</i> starch digestibility of weaning food	134
4.6.2	Rheological changes of weaning food in the simulated human digestive system	136
4.6.2.1	<i>In vitro</i> mouth incubation	136
4.6.2.2	<i>In vitro</i> stomach incubation	136
4.6.2.3	<i>In vitro</i> intestine incubation	137

4.6.3	Modelling Rheological behaviour of weaning food in simulated human digestive system	138
4.7	Cytotoxicity study of developed weaning formula	142
4.7.1	XTT assay and Trypan blue exclusion assay	142
	Tetrazolium salts have been widely used as detection	
4.8	Modelling of moisture sorption isotherm and its thermodynamic properties for weaning formula	144
4.8.1	Moisture adsorption isotherms	144
4.8.2	Temperature dependence of the sorption isotherms	145
4.8.3	Mathematical description of the adsorption isotherms	145
4.8.4	Thermodynamic properties	147
4.8.4.1	Net Isosteric heat of sorption and sorption entropy	147
4.8.4.2	Enthalpy-Entropy Compensation Parameters	149
4.8.4.3	The Gibb's free energy change	149
4.9	The sensory attributes and quality evaluation of the weaning formula	151
4.9.1	Sensory evaluation of the weaning formula	151
4.9.2	Quality evaluation of developed weaning formula	151
	Peroxide value (PV) and free fatty acid (FFA)	
	Bibliography	153
5	Summary and Conclusions	163
	Future scope of work	
	Appendix	170
	Publications from the present work
