	assessment of anticoagulant property and preparation of active	
	anticoagulant fraction from selected plants	
4.1	Brief introduction	103
4.2	Results	104
	4.2.1 The aqueous extract of the leaves of <i>Leucas indica</i> and <i>Momordica charantia</i> showed superior anticoagulant activity	104
	4.2.2 Optimization of extraction conditions of <i>L. indica</i> and <i>M. charantia</i>	104
	4.2.3 Preparation of active anticoagulant fraction (AFLI) from aqueous leaves extract of <i>L. indica</i>	106
	4.2.4 Gas chromatography–mass spectrometry analysis of AFLI	110
	4.2.5 SDS-PAGE analysis of AFLI	110
	4.2.6 LC-MS/MS analysis of major protein constituent of AFLI	111
	4.2.7 Formulation of active anticoagulant preparation (AAP)	112
	4.2.8 Dose- and time-dependent anticoagulant activity of AAP and AFLI	112
	4.2.9 Inhibition of catalytic activity of thrombin and FXa by AAP	115
	4.2.10 Fibrin(ogeno)lytic activity of AAP	118
	4.2.11 Spectrofluorometric analysis to determine the interaction of AAP with thrombin/ fibrinogen/ FXa	119
	4.2.12 AAP demonstrated <i>in vitro</i> thrombolytic activity	121
	4.2.13 AAP is devoid of hemolytic activity and cytotoxicity against mammalian cells and did not affect the cytochrome P450 enzymes	122
	4.2.14 AAP showed antiplatelet activity and also inhibited the collagen and ADP-induced platelet aggregation	124
	4.2.15 Determination of <i>in vivo</i> toxicity of AAP in Swiss albino mice	125
	4.2.16 Effect on haematological and serum biochemical parameters of AAP-treated mice	126
	4.2.17 Histopathological study of tissues obtained from AAP-treated and control group of mice	128
	4.2.18 AAP demonstrated <i>in vivo</i> anticoagulant and defibrinogenating activity	129
	4.2.19 Antithrombotic effect of AAP against k-carrageenan-induced tail thrombus in mice	131
1.3	Discussion	132
	Bibliography	136
	Chapter V: Characterization and mechanism of anticoagulant action	141-190
	of a fibrin(ogen)olytic serine protease (Lunathrombase) purified from	
	active fraction of <i>L. Indica</i> (AFLI)	
5.1	Brief Introduction	141
5.2	Results	142
	5.2.1 Purification of major fibrinogenolytic protease from the leaves of <i>L. indica</i>	142
	5.2.2 Peptide mass fingerprinting, de novo sequencing, amino acid composition, and secondary structure analyses of lunathrombase	145
	5.2.3 Lunathrombase demonstrated anticoagulant activity	148

tents		Page No.
5.2.4	Fibrin(ogen)olytic activity of lunathrombase	149
5.2.5	RP-UHPLC analysis of fibrinogen degradation by lunathrombase	152
	and nattokinase	
5.2.6	FPA and FPB did not influenced the fibrinogenolytic activity of	153
	lunathrombase	
5.2.7	Substrate specificity and effect of temperature and pH on catalytic	153
	activity of lunathrombase	
5.2.8	Lunathrombase is devoid of N- or O-linked oligosaccharides	155
5.2.9		155
	activity is not influenced by the endogenous protease inhibitors of	
	plasma	
5.2.10	Lunathrombase inhibits the pharmacological activity of thrombin	157
5.2.11		161
	lunathrombase with thrombin/ fibrinogen/ FXa	
5.2.12	Isothermal calorimetry analysis of the interaction between	163
	lunathrombase and thrombin /fibrinogen	
5.2.13	Lunathrombase has <i>in vitro</i> thrombolytic potency	164
5.2.14	Lunathrombase is devoid of hemolytic activity and cytotoxicity	165
	against mammalian cells	
5.2.15	Lunathrombase showed antiplatelet activity by inhibiting	168
	collagen/ADP/arachidonic acid-induced platelet aggregation	
5.2.16	Lunathrombase increased cAMP level and inhibited COX-1 to	170
	exert its antiplatelet effect	
5.2.17	Determination of in vivo toxicity of lunathrombase in Wister	173
	strain rats	
	5.2.17.1 Effect on haematological, serum biochemical and	173
	immunoglobulin parameters	
	5.2.17.2 Histopathological study	175
5.2.18	Lunathrombase demonstrated in vivo anticoagulant and	176
	defibrinogenating activity	
Discus	sion	179

	Chapter VII: The mechanism of anticoagulant action of an active	217-245
	anticoagulant fraction (AAF) from the fruits of <i>M. charantia</i>	
7.1	Brief introduction	217
7.2	Results	217
	7.2.1 Active anticoagulant fraction (AAF) demonstrated superior	
	anticoagulant and fibrin(ogen)olytic activity, compared to the aqueous extract prepared from the whole fruits of <i>M. charantia</i>	
	7.2.2 SDS-PAGE analysis of fibrinogen/fibrin degradation by AAF	220
	7.2.3 AAF did not inhibit thrombin or FXa in exerting its anticoagulant action	
	7.2.4 Fibrin(ogen)olytic activity of AAF was not influenced by endogenous protease inhibitors of plasma but inhibited by serine protease inhibitors	
	7.2.5 Spectrofluorometric analysis showed interaction of AAF with fibrinogen	225
	7.2.6 AAF demonstrated antiplatelet activity and inhibited collagen and ADP-induced platelet aggregation	227
	7.2.7 AAF demonstrated <i>in vitro</i> clot-bursting activity and an antithrombotic effect but no direct hemolytic activity or cytotoxicity against mammalian cells	
	7.2.8 Analysis of AAF	231
	7.2.8.1 Phytochemical screening of AAF	231
	7.2.8.2 Amino acid composition and LC-MS/MS analysis of the protein constituents of AAF	231
	7.2.8.3 GC-MS analysis of AAF	235
	7.2.9 AAF demonstrated post-storage activity	236
	7.2.10 AAF demonstrated <i>in vivo</i> anticoagulant and defibrinogenating activity	g 236
	7.211 Antithrombotic effect of AAF in the mice thrombus model	237
