Abstract	i
Decleration	v
Certificate	vii
Acknowledgment	xi
Dedication	xv
List of Tables	xxi
List of Figures	xxiii
List of abbreviations	xxxi
List of symbols	xxxiii
1 Introduction	1
1.1 Need of low cost and field portable instruments with reference to resource limited regions	1
1.2 Realization of smartphone as sensing platform	4
1.3 Review of literature	6
1.3.1 Smartphone camera based optical sensing platforms	6
1.3.2 Smartphone ALS based optical sensing platforms	12
1.3.3 Smartphone NFC based sensing platform	14
1.3.4 Smartphone USB based sensing platforms	15
1.3.5 Smartphone audio jack based sensing platforms	17
1.4 Statement of the research problem and research motivation	18
1.5 Scope of the thesis and thesis contribution	20
References	23

2 Smartphone as a hardware and software platform for optical device development	35
2.1 Introduction	35
2.2 Embedded sensors and functional components in smartphone	36
2.2.1 Brief overview of smartphone embedded sensors used to develop different tools for the present work	38
2.3 Overview of the software platform used for application development	45
2.4 Summary	51
References	51
3 Design of smartphone based optical sensor suitable for applications both in visible and near infra-red spectral regime	53
3.1 Introduction	53
3.1.1 Beer-Lambert's law of absorption and determination of concentration	54
3.1.2 Limitations of conventional photometric instrumentation	55
3.2 Design of a field portable smartphone platform photometric tool for detection of fluoride level concentration in drinking water	56
3.2.1 Material and methods	57
3.2.2 Preparation of calibration standard solutions	57
3.2.3 Spectrophotometric analysis of the test solution	58
3.2.4 Optical layout and device fabrication	59
3.2.5 Development of the FSense smartphone application	62
3.2.6 Device calibration	66
3.2.7 Evaluation of different sensoristic parameters of the designed smartphone based photometric sensor	68
3.2.8 Comparison of the designed smartphone based photometric platform with a laboratory grade spectrophotometer	71
3.2.9 Sensor performance evaluation of the proposed tool with different smartphones	72
3.2.10 Comparison of the proposed smartphone photometric platform with the existing portable spectrometers	73

3.3	Extending the applicability of the smartphone photometer to visible and NIR spectral regime	75
3.3.1	Material and methods	76
3.3.2	Spectrophotometric analysis of the standard iron(II) and phosphate solution	79
3.3.3	Optical layout and device fabrication	80
3.3.4	Development of PhotoSense smartphone application	81
3.3.5	Device calibration	85
3.3.6	Evaluation of different sensoristic parameters of the designed smartphone optical platform	87
3.3.7	Comparison of the designed smartphone based photometric platform with a laboratory grade spectrophotometer	89
3.4	Summary	90
	References	91
4	Water turbidity measurement using smartphone	95
4.1	Introduction	95
4.1.1	Light scattering and measurement of turbidity in a particle suspension	97
4.1.2	Nephelometric determination of water turbidity	98
4.2	Preparation of formazin calibration standard	101
4.2.1	Optical layout and device fabrication	102
4.2.2	Development of the smartphone application	104
4.2.3	Device calibration	105
4.2.4	Evaluation of different sensoristic parameters of the designed smartphone nephelometric platform	107
4.2.5	Comparison of the designed smartphone based nephelometric platform with a standard laboratory grade tool	109
4.2.6	analysis of interference in measurement from color	111
4.3	Summary	112
	References	112
5	Design of smartphone based fiber optic evanescent wave sensor for detection of water salinity	117

5.1	Introduction	117
5.2	Theory of the fiber optic evanescent wave sensors	119
5.3	Materials and methods	122
5.4	Optical layout and fabrication of the fiber optic sensor	123
5.5	Development of the android application	125
5.6	Device calibration	126
5.7	Evaluation of different sensoristic parameters of the designed sensor	128
5.8	Comparison of the device performance with a standard tool	132
5.9	Summary	133
	References	134
6	Design of a compact smartphone optical system for interferometric based sensing investigations	137
6.1	Introduction	137
6.2	Working principle of the designed smartphone platform interferometric system	139
6.3	Optical layout and fabrication of the designed smartphone based interferometer	141
6.4	Monitoring of optical phase difference in an interferometric process	143
6.5	Design of the interferometric optical set-up using 3D printer	147
6.5.1	Redesigning of the proposed smartphone interferometer	149
6.5.2	Smartphone application based fringe processing and data analysis	153
6.5.3	Determination of small angular rotations by the interferometric system	157
6.6	Summary	164
	References	164
7	Conclusions and future prospect of the thesis work	169
7.1	Conclusions	169
7.2	Limitations	171
7.3	Future prospects	172
	References	173
