*“It’s been said that astronomy is a humbling and,
I might add, a character-building experience.”*

– *Carl Sagan*

The completion of this thesis work has been a wonderful journey which would not have been possible without the constant support and motivation received from a lot of people. I take this opportunity to thank each and every one of them for always being there in my hour of need.

First and foremost, I will always be indebted to my supervisor and mentor, **Dr. Rupjyoti Gogoi**, who has invariably shown the utmost faith in my abilities and provided a constant source of motivation for me throughout all these years of my association with her. She has always pushed me to excel not just in research, but also in life. She has always been available, whether via email or instant messaging, to advice me whenever I was in doubt. I feel most fortunate to have got this opportunity to work under her guidance and I could not have asked for a better, more friendly and understanding person as my Ph.D. advisor. I will always remember the values she has imparted which have helped me evolve, both as a researcher and a human being, during the course of this Ph.D.

I extend my sincere gratitude to **Prof. Ranjan Gupta**, who co-supervised my research work and was most patient and helpful whenever I encountered an obstacle. I am very thankful to him for providing me with an opportunity to work and learn from his expert self.

This thesis work would never have been possible without the invaluable contributions made by **Dr. P. Shalima**, who has been highly instrumental in coming up with new ideas and possibilities, some of which we have explored in the last few years during the course of this Ph.D. work. She has been the go-to person for me whenever I got stuck somewhere and I would never be

disappointed after seeking her advice. She has always tried to clear my doubts in the best possible way and I have the utmost respect for her being so humble in spite of the immense knowledge that she possesses. I am forever grateful to her for motivating and guiding me towards the completion of this thesis work.

I would like to thank the members of my doctoral committee: **Dr. Amit Pathak**, **Dr. Gazi A. Ahmed** and **Dr. Moon Moon Devi**, for their insightful comments and encouragement which gave me the incentive to widen my research from various perspectives. I will always be grateful to Amit Sir for the fruitful discussions and valuable advice which he imparted throughout the course of my Ph.D. work.

Tezpur University has been my home for the past eight years, and the Department of Physics has been a fantastic place to study. In particular, I cannot imagine a better working environment than the Astronomy and Astrophysics Research Laboratory. I will always be grateful to Tezpur University for providing the best internet and computational facilities, laboratory, and infrastructure which enabled me to swiftly complete this research work. I also thank Tezpur University for providing me with financial support in the form of an institutional fellowship during the first three years of my Ph.D. work. I have also benefited immensely from the wisdom of the department's academic staff, both as an undergraduate and postgraduate.

I thank the Inter-University Centre for Astronomy and Astrophysics (IUCAA) for allowing me to pursue part of my Ph.D. coursework during the IUCAA-NCRA graduate school (2015-16) and providing financial support, hospitality, library, and computational facilities during my subsequent visits.

I would like to thank my fellow doctoral candidates for their feedback, cooperation and of course friendship which have made my time as a Ph.D. student a happy one. Without you all, my time here would not have been half so memorable as it has been, so thank you **Pranjupriya**, Homen, Prathana Ba, Rukaiya, Anshuman, Mridusmita Ba, Prithibi, and Vivek. Pranjoo has been my constant companion through all the ups and downs which would have been very difficult to face alone if it was not for her untiring love and support at each and every step. We have had a lot of fun and made a lot of memories in the last five years which I will cherish for life. I will always be grateful to you for being there whenever I needed you. I thank my friends from IUCAA, with a special mention to Reju who has always been there to solve any computational problem which I faced. I also thank Pratik, Swagat, Sharmad, Avyarthana, and Abhisek for all the fun times we had in the last three years.

Last but not least, I would like to acknowledge all the telescope archives, online astronomical facilities, and various other sources without which this thesis work would not have been possible. This work includes material reproduced under the terms of the Creative Commons Attribution ShareAlike 2.5/3.0 Unported license. This thesis work is based in part on observations made with the *Spitzer Space Telescope*, which is operated by the Jet Propulsion Laboratory, California Institute of Technology under a contract with NASA. This work is based in part on observations with *AKARI*, a JAXA project with the participation of ESA. The research work presented here also makes use of data products from the *Wide-field Infrared Survey Explorer (WISE)*, which is a joint project of the University of California, Los Angeles, and the Jet Propulsion Laboratory/California Institute of Technology, funded by the National Aeronautics and Space Administration. Some of the data presented in this work were obtained from the Mikulski Archive for Space Telescopes (MAST). STScI is operated by the Association of Universities for Research in Astronomy, Inc., under NASA contract NAS5-26555. Support for the MAST for non-HST data is provided by the NASA Office of Space Science via grant NNX09AF08G and by other grants and contracts. This research has made use of the NASA/IPAC Extragalactic Database (NED), which is operated by the Jet Propulsion Laboratory, California Institute of Technology, under contract with the National Aeronautics and Space Administration. This research has made use of the SIMBAD database, operated at CDS, Strasbourg, France.

Thank you all for your continued support.

Gautam Saikia
