

## Appendix I

### Classification of the specimens chosen for the work

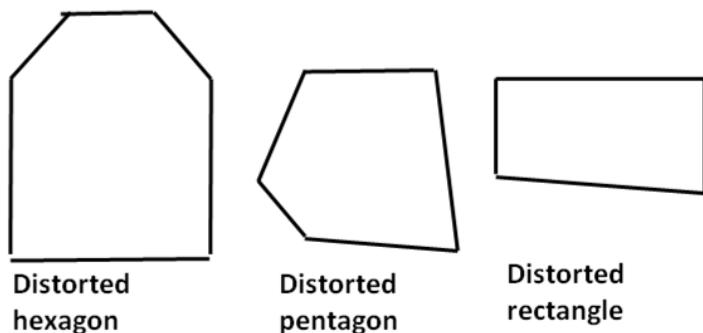

Sample	Scientific Name	Kingdom	Phylum	Class	Order	Family	Genus
Dragonfly	Gynacantha Dravida	Animalia	Euarthropoda	Insecta	Odanata	Aeshnoidea	
Damselfly	Pseudagrion Microcephalum	Animalia	Euarthropoda	Insecta	Odanata	Coenagrionoidea	
White Admiral butterfly	Limenitis Camilla	Animalia	Arthropoda	Insecta	Lepidoptera	Nymphalidae	Limenitis
Large White butterfly	Pieris Brassicae	Animalia	Arthropoda	Insecta	Lepidoptera	Pieridae	Pieris
Dark Blue Tiger butterfly	Tirumala Septentrionis	Animalia	Euarthropoda	Insecta	Lepidoptera	Nymphalidae	Tirumala

### Classification of the specimens from plant kingdom chosen for the work

Sample	Scientific name	Family
White rose	Rosa chinensis var spontanea	Rosacea
Light Pink rose	Rosa chinensis var minima	
Dark Pink rose	Rosa chinensis var minima	
Red hibiscus	Hibiscus rosa sinensis	Malvaceae
Pink hibiscus		
Yellow hibiscus		

## Appendix II

(a)

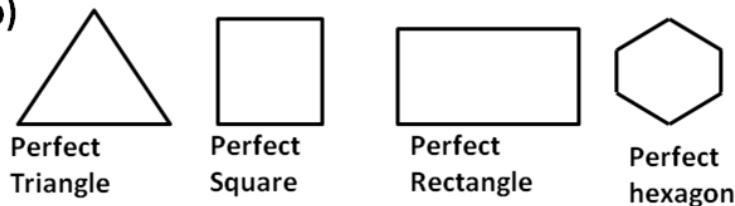

Distorted  
hexagon

Distorted  
pentagon

Distorted  
rectangle

Structures found in dragonfly wing

(b)

Perfect  
Triangle

Perfect  
Square

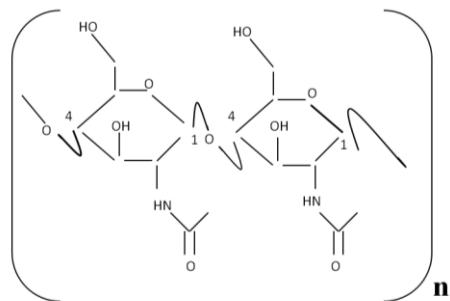

Perfect  
Rectangle

Perfect  
hexagon

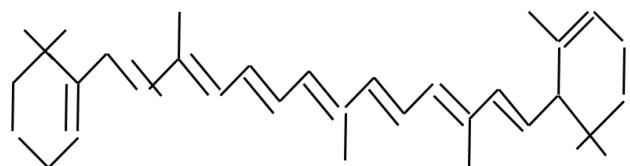

Structures not found in dragonfly wing

### Appendix III

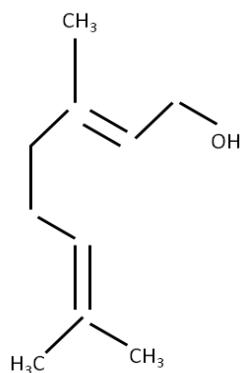

(a) Chitin ( $C_8H_{13}O_5N$ )<sub>n</sub>

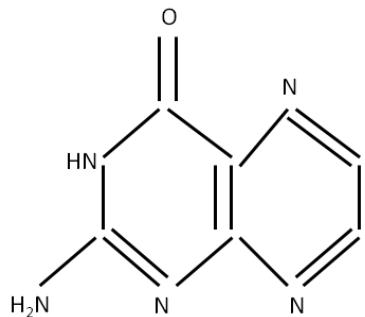

(b) Carotenoid ( $C_{40}H_x$ )

(c) Geraniol ( $C_{10}H_{18}O$ )

(d) Pterin ( $C_6H_5N_5O$ )

## Appendix IV

### Physical properties of the liquids used for specimen treatment

Solvent	Refractive Index	Appearance	Molar Mass (mol/L)	Density (g/cm <sup>3</sup> )	Boiling point (°C)	Melting point (°C)
Ethanol	1.36	Colourless	46.06	0.789	78.5	114.5
Methanol	1.33	Colourless	32.04	0.792	64.7	97.6
Propanol	1.38	Colourless	60.09	0.803	97	126
Glycerine	1.47	Colourless	92.09	1.261	290	17.8

## Appendix V

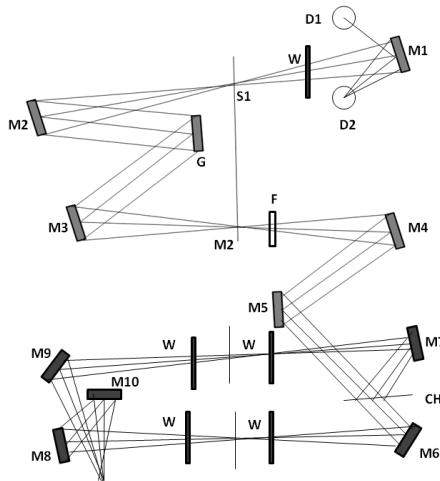

Figure: Schematic representation of the UV-Vis-NIR set up (UV-2550 Shimadzu)

Here, light emitted from the light source (deuterium lamp D2/halogen lamp is reflected by the mirrors and is incident upon the monochromator. The switching wavelength for D2 and W1 lamp are 190 and 900 nm respectively. In this spectrophotometer, the light sources are adjusted automatically ensuring that maximum light intensity is obtained. The slit width can be changed from 0.1 to 5 nm, for normal measurements, the slit width is maintained at 2nm.

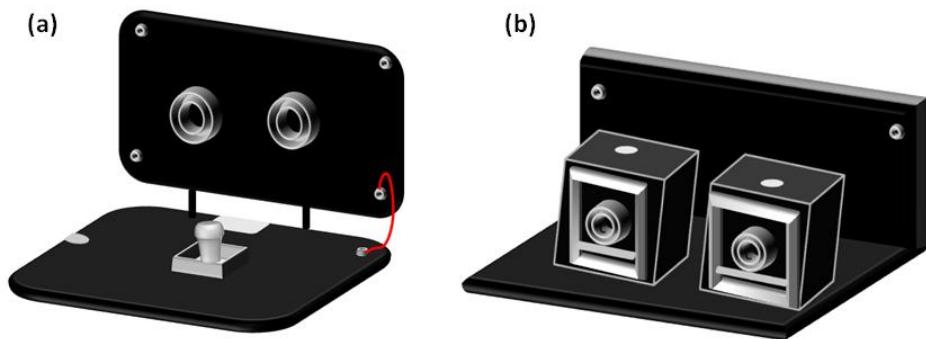

Figure: (a) Detector module of the 50 mm Integrating sphere (PerkinElmer) (b) 50 mm reflection/ transmission sphere

### Specification of 50 mm reflectance sphere

Physical characteristic	Specification
Spectral range	190-1100 nm
Dimensions	170 mm x 120 mm x 110 mm
Sphere diameter	60 mm
Weight	1.22 kg
Sample port aperture	12.5 mm
Sphere coating	Barium sulphate

## Appendix VI

**Chromaticity coordinates of the specimens are listed below**

(1) WA white untreated

<b>Wavelength (nm)</b>	<b>Reflectance (%)</b>	<b>x</b>	<b>y</b>	<b>x<sub>n</sub></b>	<b>y<sub>n</sub></b>

## Appendix VII

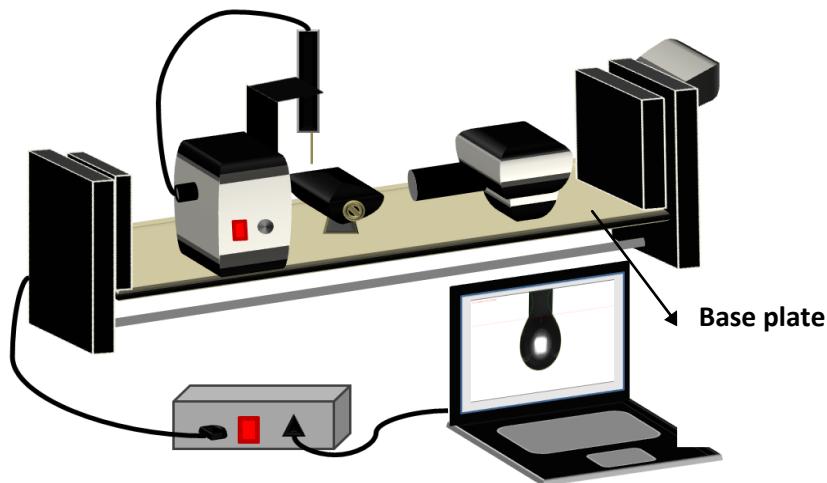

Figure: Sophisticated CA set up (Kyowa interface science Co. Ltd) for contact angle measurement

Using tilting plate methodology, we have assessed the advancing and receding angle as well as the sliding angle.

Mode of tilting	Continuation tilt
Tilting range	0-90 degree
Step size	1 degree
Tilt speed range	0.1~5 (degree/s)
