

ACKNOWLEDGEMENT

I have always believed that the journey to a destination is much important than the destination itself. As all great things come to an end, my Ph.D. thesis, although came late in the day, have witnessed contribution and co-operation of many well-wishers during the journey towards completion. As I carried on doing my experiment and subsequent field work, the names of well-wishers kept adding to my acknowledgement page. It's time to express my gratitude to each of them.

There have been several false starts initially which made me clueless regarding the direction I was heading in my Ph.D. programme. My supervisor Prof. D C Baruah has an immense role in pivoting the track into a focused one. His continuous guidance, motivation, support and knowledge have moulded me to think out of the box which helped me in carrying out my Ph.D. research. I could not have imagined having a better supervisor and mentor to complete my Ph.D.

I thank my Doctoral Committee members Prof. R Kataki, Prof. D Deha, Prof. M Bhuyan, and Prof. J K Sarma for their active interests and constructive feedbacks in the progress of my work. I am also thankful to Dr. S Mahapatra for his valuable suggestions and expertise in the subject matter. I am grateful to Dr. P K Choudhury, Dr. N Sarma, Dr. B K Kakati and Dr. V Verma for their support and valuable feedback on my research work.

I am grateful to Tezpur University for the financial support in terms of Institutional Fellowship. I am also thankful to BBSRC, U.K.; Asia Pacific Network for Global Change Research, University of Nottingham, UK for supporting me financially through sponsored projects to carry out Ph.D. research.

I acknowledge the support of Technical Officer and Technical Staffs, of the Department of Energy for providing laboratory facilities in conducting my experiments. I am grateful to Mr. B Gogoi, Mr. T Borah and Mr. T Lahon for the technical support. The continuous support and motivation from Mr. T Lahon helped me throughout my research work.

We spend most of your research period with our lab-mates. I had the opportunity to work with some of the best research enthusiasts and technical minds in the laboratory. Dr. Sampriti Kataki, Dr. Moonmoon Hiloidhari, and Mr. Dipal Baruah deserve my gratitude for teaching the art of carrying out research, analyze and present findings. My sincere thanks go to my current lab-mates Barkhang, Trinakshee and Bharat for their immense help in every possible way in my Ph.D. thesis. Special mention goes to my ex lab-mates Doljit, Gunjait and all M.Tech students of the laboratory for every special moments in my academic period.

Ms. Lina Gogoi deserves my special acknowledgement for her continuous moral support in helping me overcoming several hurdles I faced during my Ph.D. period. I owe her a lot for her contribution in the preparation of my thesis.

I also thank my fellow Ph.D. scholars Rumi, Bibha ba, Swagat, Lachit da and Kuldeep for their immense support during my Ph.D. work.

Words cannot describe the contribution and support of my parents and my brother throughout my Ph.D. journey. I am indebted to all the sacrifices and hardships my parents made on my behalf. My brother and I joined the Ph.D. programme together and are hopeful of ending this journey together. Throughout my Ph.D. work, I am grateful for his immense support and wish him the best of luck for his Ph.D.

Finally, I thank God, the almighty.

Rupam Patowary
