

## LIST OF TABLES

Table No.	Description	Page No.
Table 1.1	Comparative status of some common features of different types of cook stove	3
Table 1.2	MNRE standards for performance of improved cook stove	5
Table 1.3	Ongoing cook stove initiatives in various countries	10-11
Table 1.4	Test protocols and their salient features	11-12
Table 2.1	Review of literatures on effects of improved cooking stoves on socio-economic upliftment and factors affecting stove design	27-30
Table 2.2	Review of literatures on impact of design improvements on performance of biomass cook stove	31-33
Table 2.3	Review of literatures on use of simulation and modeling techniques in improving biomass cook stove designs	34-35
Table 2.4	Review of literatures on waste heat utilization in biomass cook stove for multifunctional activities	36-39
Table 3.1	Heat transfer components inside the stove	50-51
Table 3.2	Constants of heat capacity equation for gas species	54
Table 3.3	Steady state input values to the model	60-61
Table 3.4	Steady state fuel bed and flame conditions for steady state heat transfer modeling	62
Table 3.5	Steady state heat transfer model validation	67
Table 4.1	Concept development and implementation strategy	74-75
Table 4.2	Delineated thermal energy components of a Multifunctional Biomass Fueled Stove	82-83
Table 4.3	List of instruments	97-98
Table 4.4	Average results of Water Boiling Test	107
Table 5.1	BIS approved forced draft models	116-117
Table 5.2	Stove considered for WBT test results comparison	119-120

<b>Table No.</b>	<b>Description</b>	<b>Page No.</b>
Table 5.3	Cost components and assumptions	125

## LIST OF FIGURES

Figure No.	Description	Page No.
Fig.1.1	Evolution of cook stoves	2
Fig.1.2	Classification of improved biomass stoves	6
Fig.3.1	Schematic diagram of stove operation showing different heat transfer components	51
Fig.3.2	Heat transfer analysis of heat of combustion	66
Fig.3.3	Share of each component on heat of combustion	67
Fig.4.1	Multifunctional biomass fuelled stove (a) Front view (b) Top view, parts as shown in Table E.1 of Appendix E	77
Fig.4.2	Assembly inside upper chamber (a) Flue gas heat extractors (b) Flue gas flow path inside flue gas heat extractors with parts listed in Table E.1 of Appendix E	78
Fig.4.3	Assembly inside upper chamber (a) Air pre-heaters (radial flow air pre-heater: right side, and parallel flow air pre-heater: left side) (b) Pre-heated air flow path inside air pre-heaters with parts listed in Table E.1 of Appendix E	78
Fig.4.4	Heat transfer components of Multifunctional Biomass Fueled Stove	82
Fig.4.5	Steady state heat transfer analysis of Multifunctional biomass fuelled stove	99
Fig.4.6	Comparative analysis of useful heat contribution during multiple pots and single pot test using SHTM for 4.5 kW Multifunctional biomass fuelled stove	102
Fig.4.7	Prototype of Multifunctional biomass fueled stove	102-103
Fig.4.8	Dimensions of Multifunctional biomass fueled stove (a) front view (b) top view (All dimensions are in mm)	103
Fig.4.9	Variation in efficiency (E) and air flow rate (AF) with changes	105

<b>Figure No.</b>	<b>Description</b>	<b>Page No.</b>
	in water content for tests with (UC) and without (WUC) using upper chamber according to BIS test protocol	
Fig.4.10	Variation in standard deviation (SD), standard error (SE) and fractional uncertainty (FU) with changes in water content with (UC) and without (WUC) using Upper Chamber according to BIS test protocol	106
Fig. 4.11	Variation in standard deviation, standard error and fractional uncertainty with changes in phases during WBT test	107
Fig. 4.12	Experimental performance test results of multifunctional biomass fuelled stove	108
Fig.5.1	Comparative analysis between Forced Draft Domestic Cook stoves and MBFS	117
Fig.5.2.	Comparative analysis between Forced Draft Commercial Cook stoves and MBFS	118
Fig.5.3	Comparative analysis of WBT cold start results between low power stoves and MBFS	121
Fig.5.4	Comparative analysis of WBT cold start results between high power stoves and MBFS	121
Fig.5.5	Comparative analysis of WBT hot start results between low power stoves and MBFS	121
Fig.5.6	Comparative analysis of WBT hot start results between high power stoves and MBFS	122
Fig. 5.7	Comparative analysis of WBT simmering phase results between domestic stoves and MBFS	122
Fig. 5.8	Comparative analysis of WBT simmering phase results between high power stoves and MBFS	122
Fig. 5.9	Variation of NPV factor with variation in time	126
Fig. 5.10	Variation in NPV of Yearly Cash Flow with variation in time	126

## LIST OF ABBREVIATIONS AND SYMBOLS

---

---

### List of abbreviations

<b>Abbreviations</b>	<b>Descriptions</b>
BIS	Bureau of Indian Standards
MBFS	Multifunctional Biomass Fuelled Stove
PAH	Parallel Flow Air Preheater
PHE	Parallel Flow Flue Gas Heat Extractor
RAH	Radial Flow Air Preheater
SHE	Spiral Flow Flue Gas Heat Extractor
SHTM	Steady State Heat Transfer Model
WBT	Water Boiling Test

## List of symbols

<b>Symbols</b>	<b>Descriptions</b>
$A$	Area
$a$	Carbon in fuel, Air
$B$	Breadth, Length of PHE or PAH
$b$	Hydrogen in fuel
$c$	Nitrogen in fuel
$C$	Carbon
$c_p$	Specific heat
$C_{s,f}$	Constant depending on combination of pot material and fluid
$D$	Diameter
$d$	Oxygen in fuel
$D_h$	Hydraulic diameter
$exp$	Exponential
$F$	View factor, Carbon dioxide in flue gas
$f$	Friction factor
$g$	Acceleration due to gravity
$h$	Convective heat transfer coefficient
$h_{fg}$	Heat of vaporization
$H$	Hydrogen, Height
$I$	Nitrogen in flue gas
$K_R$	Radiation coefficient
$k$	Thermal conductivity
$L$	Length, Flow path length, Fin height, Lost
$M$	Mass flow rate
$m$	Mass
$\dot{m}$	Burn rate
$n$	Number of moles, Coefficients depending on combination of water and pot material, Number
$N$	Nitrogen, Fins, Data values

<b>Symbols</b>	<b>Descriptions</b>
$Nu$	Nusselt number
$NCV$	Net calorific value
$O$	Oxygen
$o$	Opacity coefficient
$P$	Perimeter
$p$	Pitch
$Pr$	Prandtl number
$Q$	Heat
$Q''$	Energy per unit volume
$Q_B''$	Heat flux
$q_{ig}$	Heat flux at ignition front
$r$	Radius
$Re$	Reynold's number
$Re_c$	Critical Reynolds number
$R_t$	Resistance
$S$	Standard deviation
$T$	Temperature
$t$	Thickness
$T_e$	Excess temperature
$U$	Overall heat transfer coefficient
$V$	Velocity
$W$	Width
$w_{ig}$	Ignition front velocity
$x$	Thickness, Excess air percentage, Data
$y_m$	Moisture content

### **Greek Symbols**

<b>Symbols</b>	<b>Descriptions</b>
$\psi$	Excess air

**Symbols**

	<b>Descriptions</b>
$\varepsilon$	Bed void, Emissivity
$\rho$	Density
$\infty$	Ambient, Initial
$\sigma$	Stefan Boltzmann constant, Standard error
$\mu$	Dynamic viscosity
$\lambda$	Latent heat of vaporization
$\beta$	Aspect ratio
$\eta$	Efficiency
$\theta$	Log mean temperature difference
$\Delta$	Difference

**Superscripts****Symbols**

	<b>Descriptions</b>
$k$	Flame opacity coefficient
$n$	Constant depending on combination of pot material and fluid
$o$	Flame opacity coefficient
$x$	Flame thickness

**Subscripts****Symbols**

	<b>Descriptions</b>
$a$	Air, Component
$an$	Annular space
$b$	Breadthwise, Bulk, Base, Boiling, component
$bcc$	Fuel bed to combustion chamber
$bp$	Fuel bed to pot bottom
$bx$	Bed to excess air
$c$	Cross-sectional
$cc$	Combustion chamber
$co$	Connector channel

<b>Symbols</b>	<b>Descriptions</b>
<i>com</i>	Combustion
<i>cond</i>	Conduction
<i>conv</i>	Convection
<i>evap</i>	Evaporated
<i>f</i>	Flame, Fuel, Fin, Fluid
<i>fb</i>	Fuel bed
<i>fc</i>	Fixed carbon
<i>fg</i>	Flue gas
<i>fp</i>	Flow path
<i>fr</i>	Flame on annular ring
<i>ft</i>	Flame top
<i>fuel</i>	Fuel
<i>g</i>	Air flux, gap
<i>HE</i>	Heat extractors
<i>i</i>	Initial, Gas component, Internal, Inlet
<i>ig</i>	Ignition
<i>l</i>	Liquid, Lengthwise
<i>lb</i>	Lower bed
<i>max</i>	Maximum
<i>mc</i>	Moisture content
<i>min</i>	Minimum
<i>n</i>	Number of components
<i>o</i>	Outer, Overall, Outlet
<i>oc</i>	Outer cover
<i>p</i>	Pot, Particles, Plate
<i>pa_fb</i>	Primary air through fuel bed
<i>pb</i>	Pot bottom
<i>r</i>	Annular ring
<i>rad</i>	Radiation
<i>RAH</i>	Radial flow air pre-heater

<b>Symbols</b>	<b>Descriptions</b>
<i>RD</i>	Rectangular duct
<i>s</i>	Supplied, Surface, Spacing
<i>sat</i>	Saturated
<i>SHE</i>	Spiral Heat Extractor
<i>t</i>	Turns, Total, Array area
<i>tb</i>	Top bed
<i>th</i>	Theoretical
<i>total</i>	Total
<i>U</i>	Utilized
<i>UC</i>	Upper chamber
<i>v</i>	Vapor
<i>vol</i>	Volatiles
<i>w</i>	Water, Wall
<i>x</i>	Excess air
<i>1 to 31</i>	Position, Components
