# Contents

**1 Introduction** **1**

1.1 Hyperspectral remote sensing image analysis . . . . . 2

1.1.1 Principles of hyperspectral remote sensing images . . . . . 2

1.1.2 Pixel-wise classification of HSI . . . . . 5

1.1.3 Challenges in classification of HSI . . . . . 6

1.2 Background literature . . . . . 9

1.2.1 Dimensionality reduction . . . . . 9

1.2.2 Active learning for classification of HSI having limited labelled samples . . . . . 14

1.2.3 Integration of spectral-spatial information for analysis of HSI 22

1.3 Objective of the thesis . . . . . 30

1.4 Organization of the thesis . . . . . 32

**2 A spectral-spatial multi-criteria active learning technique for hyperspectral image classification** **34**

2.1 Introduction . . . . . 34

2.2 Proposed technique . . . . . 37

2.2.1 Phase I: spectral-spatial feature extraction . . . . . 37

2.2.2 Phase II: proposed active learning technique for classification of HSIs . . . 40

2.3 Experimental Results . . . 44

2.3.1 Design of experiments . . . 44

2.3.2 Results: KSC data set . . . 47

2.3.3 Results: University of Pavia data set . . . 49

2.3.4 Results: Indian Pines data set . . . 52

2.3.5 Results: University of Houston data set . . . 54

2.3.6 Results: statistical significance test . . . 58

2.3.7 Results: computation time . . . 59

2.3.8 Results: sensitivity analysis . . . 60

2.4 Discussion and conclusions . . . 61

**3 An unsupervised technique for optimal feature selection in attribute profiles for spectral-spatial classification of hyperspectral images 63**

3.1 Introduction . . . 63

3.2 Proposed method . . . 66

3.2.1 Construction of entire extended multi attribute profile (EEMAP) . . . 66

3.2.2 Generation of dissimilarity matrix . . . 68

3.2.3 Feature selection using GAs . . . 69

3.3 Experimental results . . . 71

3.3.1 Design of experiments . . . 71

3.3.2 Results: KSC data set . . . 73

3.3.3 Results: University of Pavia data set . . . 74

3.3.4 Results: Indian Pines data set . . . . . 76
3.3.5 Results: University of Houston data set . . . . . 79
3.3.6 Results: computational time . . . . . 84
3.3.7 Results: curse of dimensionality . . . . . 85
3.4 Discussion and conclusion . . . . . 86

**4 Threshold-free attribute profile for spectral-spatial classification of hyperspectral images 88**

4.1 Introduction . . . . . 88
4.2 Proposed threshold-free attribute profile . . . . . 91
4.2.1 Threshold-free attribute filter . . . . . 91
4.2.2 Construction of threshold-free attribute profile . . . . . 97
4.3 Experimental results . . . . . 99
4.3.1 Design of experiments . . . . . 99
4.3.2 Results: KSC data set . . . . . 100
4.3.3 Results: University of Pavia data set . . . . . 101
4.3.4 Results: Indian Pines data set . . . . . 105
4.3.5 Results:University of Houston data set . . . . . 107
4.3.6 Results: computational time . . . . . 113
4.4 Conclusion . . . . . 114

**5 Conclusion and future direction 117**

5.1 Concluding remarks . . . . . 117
5.1.1 Contribution 1: Spectral-spatial multi-criteria active learning technique . . . . . 117

5.1.2 Contribution 2: Unsupervised optimal feature selection in EEMAP . . . . . 118

5.1.3 Contribution 3: Threshold free attribute profiles . . . . . 119

5.2 General Limitations and future developments . . . . . 120

**A Data sets description** **121**

A.1 Kennedy space center, Florida, USA (KSC) . . . . . 121

A.2 University of Pavia, Pavia, Italy . . . . . 122

A.3 Indian Pines, Indiana . . . . . 122

A.4 University of Houston, Texas, US . . . . . 124

**B Publication list** **127**
