CERTIFICATE	xi
ACKNOWLEDGMENT	xv
List of Figures	xxiii
List of Tables	xxxiii
List of abbreviations	xxxiv
1 INTRODUCTION	1
1.1 Optical microscopes and their importance for clinical diagnostics and other monitoring applications	1
1.2 Introduction to different conventional microscopic techniques:	2
1.3 Problem statement of traditional methods with respect to resource-constrained settings and possible solutions	5
1.4 Introduction of smartphones (mobile phones) and 3D-printing technology in the development of low-cost platforms	8
1.5 Review of literature	10
1.6 Research motivation	22
1.7 Scope of the thesis and thesis contribution	23
References	26

2	Hardware and software of a smartphone for the development of optical imaging devices	35
2.1	Background	35
2.2	Sensors and functional components integrated in a smartphone	36
2.3	Smartphone-based optical imaging and sensing platforms	38
2.4	CMOS imaging sensor and functional components of a smartphone for development of an imaging device	39
2.5	Software platform for phone-based application development	46
2.6	Summary	47
	References	48
3	Design of a wide-field finite-conjugate microscopic imaging platform on smartphone	51
3.1	Background	51
3.2	Working principle	53
3.2.1	Description of the imaging and magnification system	53
3.2.2	Description of the illumination technique	54
3.3	Device construction	56
3.4	Optical characterization	57
3.5	Practical imaging using the smartphone microscopic device	59
3.5.1	Application to imaging of micro-particles and biological cells and comparison with laboratory microscope	61
3.5.2	Application of the microscopic tool to the imaging of nanoparticles	64
3.5.3	Application to imaging of microorganisms	64
3.6	Summary	65
	References	66
4	Development of a 3D-printed $4F$ microscopic imaging platform on smartphone	69
4.1	Background	69
4.2	Design of a field-portable, inexpensive smartphone microscopic system for biomedical applications	71
4.2.1	Working Principle and device construction	72
4.2.2	Development of applications in cloud server	75
4.2.3	Optical characterization of the tool	77
4.2.4	Imaging of biological specimen and comparison of the results with standard tool	78
4.2.5	Discussion	79

4.3	Optimization of the smartphone microscopic system for fluorescence imaging and onsite cell counting applications	81
4.3.1	Working Principle	82
4.3.2	Materials and methods	84
4.3.3	Optical characterization	85
4.3.4	Practical applications of the microscopic system	87
4.3.5	Discussion	93
4.4	Summary	95
	References	95
5	Design and development of a programmable illumination smartphone microscopy (PISM)	99
5.1	Background	99
5.2	Working principle	101
5.2.1	The PISM	101
5.2.2	Imaging system design	102
5.2.3	Illumination engineering using an OLED display	105
5.3	Materials and methods	109
5.3.1	Fabrication and alignment of the PISM	109
5.3.2	Image acquisition and analysis	111
5.3.3	Sample preparation	111
5.4	Optical characterization of the system	112
5.5	Practical applications of the PISM	113
5.6	Discussion	120
5.7	Summary	121
	References	122
6	Color-multiplexed OLED display illumination for realization of one-shot multi-modal microscopic imaging	125
6.1	Background	125
6.2	Working principle	127
6.3	Experimental section	128
6.4	Optical characterization of the cmSM system	132
6.5	Algorithm to construct the multi-contrast microscopic images	132
6.6	Practical applications of the proposed systems	135
6.7	Discussion	137
6.8	Summary	138
	References	138

7	Conclusions and future prospect of the present thesis work	141
7.1	Conclusions	141
7.2	Limitations	143
7.3	Future prospects	144
