

Chapters	Page No.
1. Introduction.....	1 – 26
1.1. Magnetohydrodynamics (MHD): A prospective power generation system.....	1
1.2. MHD power cycles.....	6
1.2.1. Open-cycle MHD.....	7
1.2.2. Closed-cycle MHD.....	8
1.3. Primary components of Magneto-hydrodynamics power technology.....	8
1.3.1. MHD combustor.....	8
1.3.2. Nozzle.....	9
1.3.3. MHD generator.....	10
1.4. MHD component materials.....	12
1.4.1. Seed materials.....	12
1.4.2. Electrodes.....	13
1.4.3. Magnets.....	14
1.5. Plasma in MHD operation.....	15
1.5.1. Ionization and plasma formation.....	15
1.5.2. Plasma conductivity.....	16
1.5.3. Mobility of electrons and ions.....	17
1.6. Motivation and Research objective.....	18
1.7. Chapter-wise thesis organization.....	20

Bibliography.....	26
2. Literature Review.....	27-50
2.1. Introduction.....	27
2.2. MHD systems.....	28
2.3. Thermodynamic performance analysis of MHD systems.....	32
2.4. Energy and exergy analyses of thermal energy systems.....	36
2.5. Review summary.....	41
2.6. Scope of current research.....	42
2.7. Limitation of the present study	44
Bibliography.....	50
3. Thermodynamic Analysis of a Coal-Fired Open Cycle MHD Power Plant.....	51-65
3.1. Introduction.....	51
3.2. System description.....	53
3.3. Thermodynamic analysis of the MHD power plant.....	54
3.3.1. Fuel and air analysis.....	54
3.3.2. Estimation of adiabatic flame temperature.....	55
3.3.3. Modeling of MHD system components.....	56
3.3.3.1. MHD combustor modeling.....	56
3.3.3.2. Modeling of nozzle.....	57
3.3.3.3. Modeling of MHD generator.....	58

3.3.4.	Estimation of nozzle exit Mach number.....	58
3.3.5.	Determination of nozzle parameters at constant nozzle inlet Mach number.....	59
3.3.6.	Calculation of MHD system parameters.....	59
3.4.	Performance analysis of coal-fired open cycle MHD plant at constant subsonic inlet nozzle Mach number with variation in nozzle area ratio.....	59
3.4.1.	Effect of nozzle area ratio on nozzle exit Mach number....	60
3.4.2.	Effect of nozzle exit Mach number and adiabatic flame temperature on nozzle exit temperature.....	60
3.4.3.	Effect of nozzle exit Mach number and adiabatic flame temperature on nozzle exit velocity.....	61
3.4.4.	Effect of nozzle area ratio on generator maximum power density.....	62
3.4.5.	Effect of nozzle exit Mach number on maximum voltage at constant thermal input and inlet Mach	62
3.4.6.	Effect of nozzle area ratio on plant efficiency.....	63
3.5.	Summary.....	63
	Bibliography.....	65
4.	Exergy Analysis of a Coal-Fired Open Cycle MHD Plant.....	66-83
4.1.	Introduction.....	66
4.2.	Description of the MHD plant.....	69
4.3.	Mathematical formulation.....	70
4.3.1.	Energy and exergy modeling of the MHD system components.....	72

4.3.1.1. Modeling of air compressor.....	73
4.3.1.2. Modeling of MHD combustor.....	73
4.3.1.3. Modeling of nozzle.....	73
4.3.1.4. Modeling of MHD generator.....	73
4.3.1.5. Air preheater modeling.....	73
4.3.1.6. SRU modeling.....	74
4.3.1.7. DSU modeling.....	74
4.3.1.8. Modeling of stack.....	74
4.4. Determination of energy and exergy parameters of the MHD plant.....	74
4.4.1. Determination of fuel-air ratio, heating values, chemical exergy and chemical exergy ratio.....	74
4.4.2. Estimation of mass flow rate, pressure and temperature at the state points in the MHD plant.....	75
4.4.3. Calculation of energy and exergy rates of flow streams of the MHD plant.....	76
4.4.4. Component-wise evaluation of energy loss and exergy destruction.....	76
4.4.5. Determination of thermal and exergetic efficiencies of the MHD plant.....	78
4.5. Energy and exergy based performance analyses of the MHD plant.....	78
4.5.1. Energy efficiency of the MHD system components.....	78
4.5.2. Exergy efficiency of the MHD system components.....	80
4.5.3. Overall power output of the MHD system.....	80

4.6. Summary.....	80
Bibliography.....	83
5. Exergy Analysis of an MHD-GT Combined Power Plant with partially Ionized Combustion Product.....	84-120
5.1. Introduction.....	84
5.2. System description.....	89
5.3. Mathematical modeling.....	91
5.3.1. Flame temperature.....	92
5.3.2. Combustion of fuel and air.....	92
5.3.3. Calorific value of fuel.....	93
5.3.4. Chemical and physical exergy model.....	94
5.3.5. Molar specific enthalpy and entropy model.....	95
5.3.6. Energy and exergy model of MHD plant components.....	97
5.3.6.1. Modeling of air compressor.....	99
5.3.6.2. Combustor modeling.....	99
5.3.6.3. Modeling of nozzle.....	99
5.3.6.4. MHD generator modeling.....	100
5.3.6.5. Modeling of airpreheaters.....	100
5.3.6.6. SRU modeling.....	101
5.3.6.7. DSU modeling.....	101
5.3.6.8. Modeling of process heater.....	101
5.3.6.9. Stack modeling.....	102
5.3.7. Energy and exergy model of GT plant components.....	102

5.3.7.1. Modeling of GT air compressor.....	102
5.3.7.2. GT combustor modeling.....	103
5.3.7.3. Modeling of GT turbine.....	103
5.4. Determination of MHD-GT plant performance parameters.....	103
5.4.1. Estimation of mass flow rate, pressure and temperature at the state points in the MHD plant.....	104
5.4.2. Calculation of energy and exergy rates of the MHD plant.....	104
5.4.3. Determination of exergy flows, exergy destruction and exergetic efficiency of the components of the MHD plant.....	105
5.4.4. Estimation of mass flow rate, pressure and temperature at the state points in the GT plant.....	106
5.4.5. Determination of exergy destruction and exergetic efficiency of the GT plant.....	107
5.4.6. Determination of net power output and exergetic efficiency of the combined MHD-GT plant.....	108
5.5. Energy and exergy based performance analyses of the MHD-GT plant.....	108
5.5.1. Effects of combustion product dissociation on MHD-GT system performance.....	109
5.5.2. Effects of ionization on net power output of MHD-GT system.....	110
5.5.3. Validation of the results of the present model.....	110
5.6. Summary.....	113
Bibliography.....	120
6. Performance Assessment of a Magnetohydrodynamic Power Generation System on the basis of Advanced Exergy Analysis.....	121-156

6.1. Introduction.....	121
6.2. System description.....	127
6.3. Methodology.....	128
6.3.1. Conventional exergy analysis.....	129
6.3.1.1. Physical and chemical exergy model of the flow streams.....	130
6.3.1.2. Chemical exergy of ionic products of the flow streams.....	130
6.3.1.3. Chemical exergy model of fuel on dry and ash free basis.....	130
6.3.1.4. Enthalpy and entropy model of the product flow streams.....	131
6.3.1.5. Composition of fuel, air and combustion products...	131
6.3.1.6. Exergy model of fuel and product, exergetic efficiency, exergy destruction ratio, exergy loss ratio.....	133
6.3.1.7. Component-wise energy and exergy balance model.	134
6.3.2. Advanced exergy analysis.....	135
6.3.2.1. Exergy destruction model with avoidable and unavoidable destruction parts.....	136
6.3.2.2. Exergy destruction model with endogenous and exogenous destruction parts.....	136
6.3.2.3. Endogenous exergy destruction model in combination with avoidable and unavoidable destruction parts.....	136
6.3.2.4. Exogenous exergy destruction model in combination with avoidable and unavoidable destruction parts.....	136
6.3.2.5. Avoidable and unavoidable exergy destruction	

model in combination with endogenous and exogenous portions of exergy reduction.....	137
6.3.2.6. Exergy model for unendogenous and mexogenous exergy destruction estimation.....	138
6.3.3. Assumptions for hypothetical, actual and unavoidable operating conditions.....	139
6.4. Determination of MHD plant performance parameters.....	139
6.4.1. Determination of thermodynamic data, energy and exergy rates of the flow streams.....	140
6.4.2. Determination of fuel and product exergies, exergy destruction rates, exergetic efficiencies and exergy destruction ratios of the flow streams.....	141
6.4.3. Estimation of the sub portions of exergy destruction.....	142
6.4.4. Determination of mexogenous part of exergy reduction.....	143
6.4.5. Determination of the mixed values of destruction in exergy rates.....	144
6.5. Advanced exergy analysis of the standalone MHD power plant.....	145
6.5.1. Effects of variation of exergy reduction rate of endogenous type.....	145
6.5.2. Effects of variation of exergy reduction rate of avoidable type.....	148
6.5.3. Effects of variation of exergy reduction rate of unavoidable type.....	149
6.6. Result validation.....	150
6.7. Summary.....	151

Bibliography.....	156
7. Conclusion and Scope for Future Work.....	157-160
7.1. Conclusions and Key Findings.....	157
7.2. Novelty of the Work.....	159
7.3. Scope for future work.....	160
List of publications.....	162
