

## DEDICATION

*This work is completely dedicated to my Dad (बुवा), my late Mom (मुमाँ), and Bipul (मुस-मुस), who constantly inspired me.*

*Also, towards all the women excelling in research to achieve their dreams.*

*“On days I hate being myself,  
days I want to disappear forever  
Let's make a door in your heart  
Open the door and this place will await*

*It's okay to believe,  
the Magic Shop will comfort you  
While drinking a glass of hot tea  
And looking up at the Milky Way  
You'll be alright, oh,  
this here is the Magic Shop”*

*-Jimin & Jin, Magic shop, BTS*

*"Who cares where happiness comes from?*

*We're all a little weird,*

*We're all a little wacky.*

*Some more than others.*

*But if it works, it works."*

*-Dean Winchester, Supernatural*

*“The only person you are destined to become  
is the person you decide to be.”*

*- Ralph Waldo Emerson*

## DECLARATION

I, hereby declare that the thesis entitled “*Computational insights into the central role of Xeroderma pigmentosum group A (XPA) protein in nucleotide excision repair (NER)*” has been submitted to Tezpur University in the Department of Molecular Biology and Biotechnology under the School of Sciences for partial fulfillment for the award of the degree of Doctor of Philosophy in Molecular Biology and Biotechnology.

I am the sole author of this thesis.

This is a true copy of an original work carried out by me including any required final revisions, as accepted by my examiners.

Further, I declare that no part of this work has been reproduced elsewhere for the award of any other degree.

**CERTIFICATE OF THE PRINCIPAL SUPERVISOR**

This is to certify that the thesis entitled “*Computational insights into the central role of Xeroderma pigmentosum group A (XPA) protein in nucleotide excision repair (NER)*” submitted to the School of Sciences, Tezpur University in partial fulfillment for the award of the degree of Doctor of Philosophy in Molecular Biology and Biotechnology is a record of original research work carried out by **Ms. Sushmita Pradhan** under my supervision and guidance.

All help received by her from various sources have been duly acknowledged. No part of this thesis has been reproduced elsewhere for award of any other degree.

**CERTIFICATE OF THE EXTERNAL EXAMINER  
AND ODEC**

This is to certify that the thesis entitled “*Computational insights into the central role of Xeroderma pigmentosum group A (XPA) protein in nucleotide excision repair (NER)*” submitted by Ms. Sushmita Pradhan to Tezpur University in the Department of Molecular Biology and Biotechnology under the School of Sciences in partial fulfillment of the requirement for the award of the degree of Doctor of Philosophy in Molecular Biology and Biotechnology has been examined by us on 27/01/2023 and found to be satisfactory.

The committee recommends for the award of the degree of Doctor of Philosophy.

## ACKNOWLEDGEMENT

*I would not have been able to complete this degree without the support of numerous people, and I wish to acknowledge their support. First of all, I would like to express my sincerest gratitude to my Supervisor Dr. Venkata Satish Kumar Mattaparthi, for mentoring and constantly encouraging me during my doctoral research program. He always had faith in me and using constructive criticism, he anchored me in the right direction whenever I was under duress. My heartfelt gratitude goes to him for all his help, dedication, and patience during the writing of this thesis.*

*I would also like to thank the Head of the Department of MBBT, Prof. Robin Doley, former HoDs: Prof. Suvendra Kumar Ray, Prof. Anand Marcus Ramteke, and my Doctoral Committee members - Prof. Suvendra Kumar Ray, Dr. Rupak Mukhopadhyay, and Dr. Suman Dasgupta, Department of MBBT, Tezpur University, for their insight, comments, and valuable suggestions during my Ph.D. tenure.*

*I would like to acknowledge all the faculty members, and the non-teaching staff from the Department of MBBT, Tezpur University for their help and encouragement. I would like to take this opportunity to thank Tezpur University for providing me*

## ACKNOWLEDGEMENT

*with the state-of-the-art infrastructure and facilities for my research. I would like to acknowledge the financial support provided by Tezpur University and DBT.*

*No words will be good enough in expressing my gratitude towards lab mates: Mary Di, Himakshi Di, Airy Di, Pundarikaksha, Priyanka, and Dorothy for their immense help and support. My heartfelt thanks to all the project (Integrated M.Sc. and M.Sc.) students: Barsha, Zeba, Sunanda, Ankit, Mridusmita, Gariyoshi, Pallav, and Krishna for their help and support.*

*I would also like to express my heartfelt gratitude to my batchmates, Mayuri, Minhaz, Pritam, Zaved, and Sayani for being there as my constant pillars of strength. A special thanks to my wall-mate, Anindita for being there during tough times in the hostel.*

*A special thank you to Dr. Sangeetha Menon for introducing me to the world of bioinformatics! Furthermore, I would not have been able to stand here and defend my viva-voce, had it not been Dr. Praveen Somani (my psychiatrist), Mr. Bibhushan Regmi (therapist), and Prof. Shashi Baruah who made me accept my PTSD, made me come out of my shell and led me towards the path of healing and recovery.*

## ACKNOWLEDGEMENT

I would also like to express my thankfulness to my family members: Kakas-Kakis, Ninis-Pajus, Tatahs-Venajus, Dadas-Tatajus, Nephews-Nieces, and my cousins. Nothing can surmount to measure up my thanks to these few people: my brother Bipul (मुस-मुस), and my bestest of friends, Sruthi, Mrinalini (Myke), Narmatha, Ritika (इयाकने बुढिया), Krishna, Navin, Siddharth, Arpan, Jason, and Manish for always being there to cheer me up, for being my toughest critic, and pushing me to strive beyond the boundaries!!!

Above all, my indebted gratefulness goes to my Dad (बुवा) and my late Mom (मुमाँ) for always believing in me, supporting me, and for your unconditional love and blessings. Thank you for everything. Love you both!!

सुष्मिता प्रधान

## *LIST OF FIGURES*

<b>Table No.</b>	<b>CHAPTERS</b>	<b>Page No.</b>
<b>Chapter 1</b>		
1.1	Comparative DNA damage and repair mechanisms.	4
1.2	Schematic representation base excision (BER) pathway.	5
1.3	Comparison between prokaryotic and eukaryotic MMR pathways.	6
1.4	Illustration of double-strand break (DSB) pathway.	7
1.5	The chemical structures of DNA photoproducts are caused by sunlight.	8
1.6	Mechanism of eukaryotic nucleotide excision repair.	10
1.7	An overview of the damage recognition step of NER.	12
1.8	Schematic view of the damage verification step of NER and pre-incision complex formation.	14
1.9	Later stages of the NER pathway: dual incision, gap-filling, and ligation.	15
1.10	Symptoms of NER defects: (A) XP, (B) CS, and (C) TTD.	19
1.11	The protein sequences of XPA across seven diverse species.	23

## LIST OF FIGURES

1.12	Structure and mutations of the XPA gene.	23
1.13	NMR structure of XPA (aa98-219).	24
1.14	XPA domain and its NER interacting members.	24
1.15	Redefined DBD of XPA.	25
1.16	(a) The highest-scoring pose for the XPA98–219–ssDNA-RPA70 complex was predicted by the ClusPro online tool [124]. The XPA (PDB ID: 1XPA) is shown in green, the RPA70 in complex with the ssDNA strand (PDB ID: 1JMC) are shown in cyan and orange, respectively; (b) Side view into the three-body XPA98–219–ssDNA-RPA70 complex showing RPA70 Ser 173 and Asp 314 as a possible contact for XPA Lys 179 and Lys 167, respectively and (c) Y junction of the NER pre-incision complex is a three-body XPA98-219-ssDNA-RPA70 complex.	26
1.17	Two Rad14 proteins bind to the DNA strand containing the lesion.	27
1.18	Proposed Model of some XPA interactions with NER incision complexes.	27
1.19	Model of XPA depicting known interacting domains, key residues, mutations, and post-translational modifications.	28

## *LIST OF FIGURES*

### **Chapter 2**

2.1	Molecular interactions represent potential energies as a function of time for MD simulation.	45
2.2	Periodic boundary conditions in two dimensions.	46
2.3	Schematic representation of TIP3P water model.	49
2.4	Flowchart showing the steps involved in MD Simulation.	50
2.5	The process of energy minimization.	52
2.6	Computational plans based on MM/PBSA for the binding free energies.	58
2.7	Outline of the ClusPro algorithm. After each step, the number of structures retained is shown in a blue box.	63
2.8	Protein-protein interaction diagrams obtained from PDBsum server.	64

### **Chapter 3**

3.1	Cartoon representation of the central globular DNA-binding domain of XPA.	70
3.2	(A) Temperature plot and (B) Energy plot for XPA <sub>98-210</sub> homodimer.	74
3.3	(A) Temperature plot and (B) Energy plot for XPA <sub>98-239</sub> homodimer.	74
3.4	Schematic representation of the thermodynamic cycle used for the calculation of binding free energies (BFE).	76
3.5	Structure validation of the modeled XPA <sub>98-239</sub> monomer. (A) z-Score plot and (B) energy plot	79

## LIST OF FIGURES

	obtained using ProSA server, (C) Ramachandran plot, and (D) Verify 3D plot for the modeled XPA <sub>98-239</sub> monomer.	
3.6	Redefined DNA binding domain of XPA (aa98-239) along with the fourth helix.	79
3.7	(A) Docked structures of XPA <sub>98-210</sub> homodimer. (B) Docked structures of XPA <sub>98-239</sub> homodimer.	80
3.8	Root-mean-square deviation (RMSD) values of all C $\alpha$ -atoms concerning their starting structure. (A) Comparative RMSD analyses for monomers and dimers of XPA <sub>98-210/239</sub> . (B) RMSDs for the monomers of XPA <sub>98-210</sub> homodimer. (C) RMSDs for the monomers of XPA <sub>98-239</sub> homodimer	82
3.9	Radius of Gyration (Rg) values of all C $\alpha$ -atoms with respect to their starting structure. (A) Comparative Rg analyses for monomers and dimers of XPA <sub>98-210/239</sub> . (B) Rg for the monomers of XPA <sub>98-210</sub> homodimer. (C) Rg for the monomers of XPA <sub>98-239</sub> homodimer.	83
3.10	Solvent accessible surface area (SASA) values of all C $\alpha$ -atoms with respect to their starting structure. (A) Comparative SASA analyses for monomers and dimers of XPA <sub>98-210/239</sub> . (B) SASA analysis for the monomers of XPA <sub>98-210</sub> homodimer. (C) SASA analysis for the monomers of XPA <sub>98-239</sub> homodimer.	84

## LIST OF FIGURES

3.11	Comparative snapshots for (A) XPA <sub>98-210</sub> monomer and (B) XPA <sub>98-239</sub> monomer as a function of time.	85
3.12	Comparative snapshots for (A) XPA <sub>98-210</sub> homodimer and (B) XPA <sub>98-239</sub> homodimer as a function of time.	85
3.13	Distance between the monomeric units of (A) XPA <sub>98-210</sub> homodimer and (B) XPA <sub>98-239</sub> homodimer as a function of time	86
3.14	Inter-molecular hydrogen bond analyses of (A) XPA <sub>98-210</sub> homodimer, and (B) XPA <sub>98-239</sub> homodimer as a function of time.	87
3.15	The lowest energy conformers of XPA <sub>98-210/239</sub> homodimers. (A) Cartoon structure XPA <sub>98-210</sub> homodimer (B) Surface diagram of XPA <sub>98-210</sub> homodimer showing the interface site of both monomers. (C) Cartoon structure XPA <sub>98-239</sub> homodimer (B) Surface diagram of XPA <sub>98-239</sub> homodimer showing the interface site of both monomers	89
31.6	Intermolecular interactions between the monomers of. (A) XPA <sub>98-210</sub> homodimer, and (B) XPA <sub>98-239</sub> homodimer.	90

### Chapter 4A

4A.1	XPA <sub>98-210</sub> : DNA bound system: (A) Docked Structure obtained from Hex Dock8.0.0 Software, (B) Surface structure of XPA <sub>98-210</sub> with the DNA showing their closely bound stature.	107
------	---	-----

## LIST OF FIGURES

- 4A.2 Graphical representation of the interaction between Xeroderma Pigmentosum A (XPA<sub>98-210</sub>) protein with DNA. The strands are shown in green triangles, loops in blue squares, and helix in red circles. HA1 is helix 1 and HA3 helix 3. (A) Cartoon structure of the XPA<sub>98-210</sub>-DNA complex showing helices and loop residues in the red opaque color that interacts with the DNA. (B) Polar contact map for XPA<sub>98-210</sub>-DNA complex. Mostly loop and helices are involved in the interaction with the minor groove (mG), major groove (MG), and backbone regions of the curved helical DNA, with their contribution, restricted to one side of the structure. (C) Nucleotide-residue contact map, showing loop and helix residues interacting with DNA backbone and both grooves. 109
- 4A.3 Comparative MD analyses of XPA<sub>98-210</sub>- DNA free and DNA bound form. (A) RMSD values for XPA<sub>98-210</sub>-Apo and XPA<sub>98-210</sub>-DNA complexes relative to the starting structure during MD simulation. (B) The radius of Gyration (R<sub>g</sub>) values of XPA<sub>98-210</sub>-Apo and XPA<sub>98-210</sub>-DNA complex. (C) Solvent accessible surface area (SASA) values for XPA<sub>98-210</sub>-Apo and XPA<sub>98-210</sub>-DNA complex. (D) B-factor distribution for XPA<sub>98-210</sub>-Apo and XPA<sub>98-210</sub>-DNA complex. 118
- 4A.4 Comparative snapshots for XPA<sub>98-210</sub>- DNA-free and DNA-bound forms relative to the equilibrated structure at 10, 20, 30, and 40 ns respectively. 120

## LIST OF FIGURES

4A.5	Lysine residues K168 and K179 are depicted in a navy-blue ball and stick form present in the site for $\beta$ -sheets formation	120
4A.6	Superimposed Structure of XPA <sub>98-210</sub> : DNA bound and DNA Free obtained at 40ns. XPA <sub>98-210</sub> –Apo (dark-red) showed short stretches of $\beta$ -sheets while XPA <sub>98-210</sub> -DNA bound (XPA <sub>98-210</sub> displayed in olive-green and DNA in deep-blue color) presented longer stretches of $\beta$ -sheets in complex with DNA.	121
4A.7	Probable Secondary Structure Graph of XPA <sub>98-210</sub> : (A) XPA <sub>98-210</sub> - DNA Free; (B) XPA <sub>98-210</sub> - DNA Bound system	122

### Chapter 4B

4B.1	Cartoon representation of the (A) computationally modeled structure, (B) crystal structure, and (C) electron microscopy determined structure of the redefined DBD of XPA; (D) computationally generated redefined DBD of XPA superimposed against its crystal structure and electron microscopically determined structure; RMSD between (A) and (B)=1.088 Å, and RMSD between (A) and (C)= 1.129 Å.	130
4B.2	Top five docked conformations of XPA homodimer-DNA complex.	135
4B.3	Equilibration plots of (A) energy, (B) temperature, (C) pressure, (D) density, and (E) volume plots for XPA homodimer-DNA complex as a function of time.	136
4B.4	(A) RMSD, (B) R <sub>g</sub> , and (C) SASA plot for XPA	137

## LIST OF FIGURES

	homodimer-DNA complex as a function of time.	
4B.5	RMSF plots for (A) monomer 1 and (B) monomer 2 of XPA homodimer.	139
4B.6	(A) Polar contact map, (B) nucleotide-residue contact map for XPA homodimer-DNA complex, where the numbers 1, and 2 prefixed before residues indicate monomer 1 and 2, respectively. (C) Surface and (D) cartoon representation for the lowest energy conformer of XPA homodimer-DNA complex.	140
4B.7	Conformational snapshots of XPA homodimer-DNA complex at different time intervals.	140
4B.8	Intermolecular hydrogen bond analyses between (A) monomer 1 and DNA, (B) monomer 2 and DNA, and (C) monomer 1 and monomer 2 of XPA homodimer as a function of time.	142
4B.9	PPI between monomer 1 and monomer 2 of XPA homodimer.	148
4B.10	(A) $\Delta$ ASA and (B) $\delta$ ASA values for the interface residues of monomer 1, and (C) $\Delta$ ASA and (D) $\delta$ ASA values for the interface residues of monomer 2 of XPA homodimer.	155
4B.11	Interface residues (ball and stick form) of XPA homodimer show a partner attraction effect with DNA. The residue K221 (deep blue) and K224 (dark green) from monomers 1 and 2 of XPA homodimer for B state, while K221 (cyan) and K224 (sea green) from monomers 1 and 2 of XPA homodimer for U state. The ASA increased from 84.64 to 140.83 $\text{\AA}^2$ , and 65.1 to 121.92 $\text{\AA}^2$	155

## LIST OF FIGURES

for the residues K221, and K224, respectively.

4B.12	PRED plots for the interface residues of (A) monomer 1 and (B) monomer 2 of XPA homodimer involved in the DPI.	158
-------	--	-----

### Chapter 5A

5A.1	Top five models generated for XPA <sub>185-226</sub> by I-TASSER server.	169
5A.2	Structure validation of the modeled XPA <sub>185-226</sub> : (A) Ramachandran plot as obtained from Rampage server, and (B) Z-score plot energy plot as determined by the ProSA-web server.	170
5A.3	Top ten representative docked models for XPA <sub>185-225</sub> -XPE complex generated by ClusPro server along with their rankings based on the highly populated cluster numbers and their lowest energy weighted scores.	172
5A.4	Molecular docking of XPA <sub>185-226</sub> and XPE.	173
5A.5	RMSD plot of C $\alpha$ carbon atoms of XPA <sub>185-226</sub> - XPE complex as a function of time.	174
5A.6	SASA plot for XPA <sub>185-226</sub> -XPE complex as a function of time.	175
5A.7	Conformational snapshots of XPA <sub>185-226</sub> -XPE complex at different time intervals	176
5A.8	Intermolecular hydrogen bond analyses of XPA <sub>185-226</sub> -XPE complex as a function of time.	177
5A.9	(A) Cartoon representation and (B) Intermolecular interactions between Model 1 of XPA <sub>185-226</sub> -XPE complex. (C) Cartoon representation and (D) Intermolecular	182

## LIST OF FIGURES

	interactions between Model 2 of XPA <sub>185-226</sub> -XPE complex. (E) Cartoon representation and (F) Intermolecular interactions between Model 3 of XPA <sub>185-226</sub> -XPE complex.	
5A.10	Cartoon representation of the XPA <sub>98-239</sub> -XPE complex at (A) 0 ns, and (B) 40 ns. (C) Intermolecular interactions between XPA <sub>98-239</sub> -XPE complex	195
5A.11	Per-residue energy decomposition (PRED) plots for the interface residues of (A) XPA <sub>185-226</sub> and (B) XPE.	207
<b>Chapter 5B</b>		
5B.1	Schematic representation of the thermodynamic cycle used for the calculation of binding free energies (BFE).	221
5B.2	Top five models generated for XPA <sub>185-273</sub> by the I-TASSER server.	223
5B.3	Structure validation of the modeled XPA <sub>185-273</sub> : (A) Ramachandran plot as obtained from the Rampage server, and (B) Z-score plot energy plot as determined by the ProSA-web server.	223
5B.4	Preparation of the WT and R207G XPA structures, and their molecular docking with XPE.	225
5B.5	Top ten representative docked models for the WT-XPE complex generated by the ClusPro server along with their rankings based on the highly populated cluster numbers and their lowest energy weighted scores.	226

## LIST OF FIGURES

5B.6	Top ten representative docked models for the R207G-XPE complex generated by the ClusPro server along with their rankings based on the highly populated cluster numbers and their lowest energy weighted scores.	227
5B.7	(A) Temperature plot, (B) Pressure, and (B) energy plot for the WT-XPE complex. (D) Temperature plot, (E) Pressure, and (F) energy plot for the R207G-XPE complex.	228
5B.8	. Comparative RMSD analyses for (A) WT-XPE and R207G-XPE complexes, (B) monomeric units of the WT-XPE and R207G-XPE complexes, and (C) WT R207 and mutated G207 amino acids.	230
5B.9	Comparative RMSF analyses for (A) R207G and WT XPA, (B) XPE <sub>WC</sub> and XPE <sub>MC</sub> .	231
5B.10	Comparative snapshots for (A) WT-XPE and (B) R207G-XPE complexes	232
5B.11	Comparative BFE analyses for the WT-XPE and R207G-XPE complex.	234

### Chapter 6

6.1	Molecular docking of the XPA monomer with other members of PIC.	242
6.2	Molecular docking of the XPA homodimer with other members of PIC.	242
6.3	Top five models generated for full-length XPA by I-TASSER server.	244
6.4	Full-length XPA (A) before minimization, (B) after minimization.	245

## *LIST OF FIGURES*

6.5	Structure validation of the modeled XPA: (A) Ramachandran plot, (B) energy plot, (C) Z-score of XPA before minimization; and (D) Ramachandran plot, and (B) energy plot, (F) Z-score of XPA after minimization.	245
6.6	(A) cartoon representation and (B) surface diagram of the docked structure. of XPA monomer with the members of PIC. (C) Schematic diagram of PPI between the members of PIC as obtained from PDBsum server.	249
6.7	Schematic diagram of PPI between the XPA monomer and the members	250
6.8	(A) cartoon representation and (B) surface diagram of the docked structure. of XPA homodimer with the members of PIC. (C) Schematic diagram of PPI between the members of PIC as obtained from PDBsum server.	252
6.9	Schematic diagram of PPI between the XPA homodimer and the members of PIC as obtained from PDBsum server.	253

## LISTS OF TABLES

Table No.	CHAPTERS	Page No.
<b>Chapter 1</b>		
1.1	Enzymes and genes in DNA repair mechanisms	5
1.2	Functions, and main interactions of NER core members.	9-10
1.3	Comparison between XP, CS, XP/CS complex, and TTD.	16
1.4	Comparison of clinical features of patients with XP, XP neurological disease, XP/CS, and CS.	17
1.5	Loci and genes associated with XP complementation groups and XP variants.	18
1.6	Clinical signs of XP based on complementation groups.	18
1.7	Drugs used in the treatment of XP.	20
1.8	XPA mutations and their effects.	33
1.9	Mutations of XPA and their effects.	34
1.10	SNPs of XPA with respect to its cancer outcomes.	35
<b>Chapter 3</b>		
3.1	Intermolecular hydrogen bond occupancy of XPA <sub>98-210/239</sub> homodimer.	87-88
3.1A	Intermolecular hydrogen bond occupancy of XPA <sub>98-210</sub> homodimer.	87-88
3.1B	Intermolecular hydrogen bond occupancy of XPA <sub>98-239</sub> homodimer.	88
3.2	Interface statistics for XPA homodimers.	90
3.3	Intermolecular interactions across the monomer-monomer interface of XPA <sub>98-210</sub> homodimer	90-92

## LISTS OF TABLES

3.3A	Intermolecular hydrogen bond formation	90-91
3.3B	Intermolecular salt ridge formation.	91
3.3C	Intermolecular non-bonded contacts.	91-92
3.4	Intermolecular interactions across the monomer-monomer interface of XPA <sub>98-239</sub> homodimer	92-93
3.4A	Intermolecular hydrogen bond formation.	92
3.4B	Intermolecular salt bridge formation	92
3.4C	Intermolecular non-bonded contacts.	92-93
3.5	BFE (kcal mol <sup>-1</sup> ) analysis for XPA homodimers.	96-97
3.5A	BFE (kcal mol <sup>-1</sup> ) analysis for XPA <sub>98-210</sub> homodimer.	96
3.5B	BFE (kcal mol <sup>-1</sup> ) analysis for XPA <sub>98-239</sub> homodimer	96-97

### Chapter 4A

Residues involved in  $\beta$ -sheets formation in

4A.1	XPA <sub>98-210</sub> systems: DNA bound and DNA free during the simulation	111
4A.2	Residues involved in Xeroderma Pigmentosum A (XPA) protein-DNA interaction	111-116
4A.2A	Polar Contact Map of XPA-DNA.	111-112
4A.2B	Linear Contact Map of XPA-DNA.	112-114
4B.2C	Nucleotide-residue contact map.	114-116

### Chapter 4B

4B.1	The system parameterization using Xleap.	131
4B.2	Average properties of XPA homodimer in B and U states.	138

## LISTS OF TABLES

4B.3	Intermolecular interactions between DNA and monomer 1 of XPA homodimer.	142-143
4B.4	Intermolecular interactions between DNA and monomer 2 of XPA homodimer.	143-144
4B.5	Intermolecular interactions between monomer 1 of XPA homodimer and DNA.	144-147
4B.5A	Intermolecular hydrogen bonds.	144
4B.5B	Non-bonded contacts.	144-145
4B.6	Intermolecular interactions between monomer 2 of XPA homodimer and DNA	145-147
4B.6A	Intermolecular hydrogen bonds.	145-146
4B.6B	Non-bonded contacts.	146-147
4B.7	Interface statistics for XPA homodimer.	147-148
4B.8	Intermolecular interactions between monomer 1 and 2 of XPA homodimer.	149-151
4B.8A	Intermolecular hydrogen bonds	149
4B.8B	Salt bridges	149
4B.8C	Non-bonded contacts	149-151
4B.9	Comparative interface statistics of XPA homodimer in B and U states.	152
4B.10	$\Delta$ ASA and $\delta$ ASA values of XPA homodimer in B and U states	153-154
4B.10A	$\Delta$ ASA and $\delta$ ASA values of monomer 1 of XPA homodimer in B and U states.	153-154
4B.10B	$\Delta$ ASA and $\delta$ ASA values of monomer 2 of XPA homodimer in B and U states.	154

## LISTS OF TABLES

4B.11	Binding free energy (BFE) analysis for XPA homodimer-DNA complex.	156-157
<b>Chapter 5A</b>		
5A.1	MolProbity summary statistics for the modeled XPA <sub>185-226</sub> protein.	170-171
5A.2A	Intermolecular hydrogen bond occupancy for Model 1 of XPA <sub>185-226</sub> -XPE complex.	177-176
5A.2B	Intermolecular hydrogen bond occupancy for Model 2 of XPA <sub>185-226</sub> -XPE complex.	178-179
5A.2C	Intermolecular hydrogen bond occupancy for model 3 of XPA <sub>185-226</sub> -XPE complex.	179-180
5A.3	Interface statistics for XPA <sub>185-226</sub> -XPE protein complex.	181
5A.4	Intermolecular hydrogen bond between XPA <sub>185-226</sub> and XPE protein complex.	182-193
5A.4A	Intermolecular hydrogen bond between XPA <sub>185-226</sub> and XPE protein complex.	182-183
5A.4B	Intermolecular salt bridge formation between XPA <sub>185-226</sub> and XPE protein complex	184
5A.4C	Intermolecular non-bonded contacts formed between XPA <sub>185-226</sub> and XPE protein complex.	184-193
5A.5A.	Intermolecular interactions across XPA <sub>98-239</sub> -XPE interface	195
5A.5B	Intermolecular hydrogen bond between XPA <sub>98-239</sub> and XPE protein complex.	196
5A.5C	Intermolecular salt bridge formation between XPA <sub>98-239</sub> and XPE protein complex.	196

## LISTS OF TABLES

5A.5D	Intermolecular Non-bonded Contacts formed between XPA <sub>98-239</sub> and XPE protein complex.	197-205
5A.6	Per-residue energy decomposition (PRED) analysis of the interface residues of XPA <sub>185-226</sub> –XPE complex.	207-208
5A.7	Binding free energy (BFE) analysis of XPA <sub>185-226</sub> –XPE complex.	208-209

### Chapter 5B

5B.1	The system parameterization using Xleap.	219
5B.2	MolProbity summary statistics for the modeled XPA <sub>185-273</sub> protein.	224
5B.3	Binding free energy (BFE) analyses for the WT-XPE and R207G-XPE complex.	235

### Chapter 6

6.1	MolProbity summary for the modeled structure of full-length XPA before and after minimization.	245-246
6.2	Interface statistics for XPA monomer with PIC.	247-248
6.3	Interface statistics for XPA homodimer with PIC.	251

## *LIST OF ABBREVIATIONS*

6-4PP	:	6-4 photoproducts
Å	:	Angstrom
ACE	:	Atomic contact Energy
AMBER	:	Assisted Model Building with Energy Refinement
ATR	:	ataxia telangiectasia and Rad3-related protein
BFE	:	Binding free energy
CHARMM	:	Chemistry at HARvard Macromolecular Mechanics
COM	:	Centre of Mass
CPD	:	Cyclobutane pyrimidine dimer
CPPTRAJ	:	A rewrite of PTRAJ in C++
CS	:	Cockayne syndrome
CSP	:	Chemical shift perturbation
3-D	:	3-Dimensional
DBD	:	DNA-binding domain
DDB2/XPE	:	Damaged DNA binding protein 2
DNA	:	Deoxyribonucleic Acid
DPC	:	DNA-protein complex
DPI	:	DNA-protein interaction
FF99SB	:	Force-field 99 Stony Brook
ERCC1/XPF	:	Excision-repair cross-complementing group 1
FFT	:	Fast Fourier Transform
GAFF	:	General Amber force field
GB	:	Generalized Born
GG-NER	:	Global-genome NER
HA	:	Hydrogen acceptor
HD	:	Hydrogen donor
IDP	:	Intrinsically Disordered Protein

## *LIST OF ABBREVIATIONS*

I-TASSER	:	Iterative Threading ASSEMBLY Refinement
KoBaMIN	:	Knowledge-based minimization
MD	:	Molecular Dynamics
MM	:	Molecular Mechanics
NAMD	:	Nanoscale Molecular Dynamics
NER	:	Nucleotide excision repair
ns	:	nanosecond
NMR	:	Nuclear Magnetic Resonance Spectroscopy
PARP-1	:	Poly [ADP-ribose] polymerase 1
ps	:	picosecond
PB	:	Poisson-Boltzmann
PBC	:	Periodic boundary conditions
PCNA	:	Proliferating cell nuclear antigen
PDB	:	Protein Data Bank
PIC	:	Pre-incision complex
PISA	:	Proteins, Interfaces, Structures and Assemblies
PLC	:	Protein-lipid complex
PME	:	Particle Mesh Ewald
PPC	:	Protein-protein complex
PPI	:	Protein-protein interaction
PRED	:	Per-residue energy decomposition
ProSA	:	Protein structure assessment
PTRAJ	:	Short for Process TRAJectory
R <sub>g</sub>	:	Radius of Gyration
RMSD	:	Root Mean Square Deviation
RMSF	:	Root Mean Square Fluctuation
RPA	:	Replication protein A
SASA	:	Solvent-accessible surface area

## *LIST OF ABBREVIATIONS*

SV40	:	Simian vacuolating virus 40
TC-NER	:	Transcription-coupled NER
TFIIH	:	Transcription factor II H
TM	:	Template modeling
TPPI	:	Transient PPI
TTD	:	Trichothiodystrophy
TIP3P	:	Transferable Intermolecular Potential Three-point
UCSF	:	University of California, San Francisco
UniProt	:	Universal Protein Resource
UVr	:	Ultraviolet radiation
VMD	:	Visual Molecular Dynamics
XAB	:	XPA binding proteins
XP	:	Xeroderma pigmentosum
XPA	:	Xeroderma pigmentosum complementation group A
XPB	:	Xeroderma pigmentosum complementation group B
XPC	:	Xeroderma pigmentosum complementation group C
XPD	:	Xeroderma pigmentosum complementation group D
XPE	:	Xeroderma pigmentosum complementation group E
XPF	:	Xeroderma pigmentosum complementation group F
XPG	:	Xeroderma pigmentosum complementation group G
XPV	:	Xeroderma pigmentosum complementation group V

## LIST OF PUBLICATIONS

**This thesis is partly based on the following original communications:**

1. Pradhan, S., Das, P., and Mattaparthi, V. S. K. Characterizing the binding interactions between DNA binding proteins, XPA and XPE: A molecular dynamics approach. *ACS Omega*, 3: 15442-15454, 2018. (Impact factor: 4.132)
2. Pradhan, S., Sarma, H., and Mattaparthi, V. S. K. Investigation of the probable homo-dimer model of the Xeroderma pigmentosum complementation group A (XPA) protein to represent the DNA binding core. *Journal of Biomolecular Structure and Dynamics*, 37: 3322-3336, 2019. (Impact factor 3.392)
3. Pradhan, S. and Mattaparthi, V. S. K. Structural dynamics and interactions of Xeroderma pigmentosum complementation group A (XPA98–210) with damaged DNA. *Journal of Biomolecular Structure and Dynamics*, 36: 3341-3353, 2018. (Impact factor 3.392)

**Other publications:**

1. Pradhan, S., Sarma, H., Bharadwaz, B., and Mattaparthi, V. S. K. Comparative Study on the Binding Affinity of Methimazole and Propylthiouracil to Thyroid Peroxidase as an Anti-Thyroid Drug: An *in silico* Approach. *Journal of Molecular Imaging and Dynamics*, 7(131), 2017. DOI: doi.org/10.4172/2155-9937.1000131 (Impact factor 2.8)

**Book chapter:**

1. Sarma, H., Pradhan, S., Kaushik, S., and Mattaparthi, V. S. K. Phylogenetic analysis: Early evolution of life. In *Encyclopedia of Bioinformatics and Computational Biology*. Elsevier, ISBN: 9780128114148, 3: 938-952, 2019.

**Communicated manuscripts**

1. Pradhan, S., and Mattaparthi, V. S. K. Investigation on the DNA binding property of Xeroderma pigmentosum complementation group A (XPA) homodimer protein. *PROTEINS: Structure, Function, and Bioinformatics*, 2022. (Manuscript submitted)

## *LIST OF PUBLICATIONS*

2. Pradhan, S., Das, P., Borah, P., and Mattaparthi, V. S. K. Computational Investigation of R207G mutation in Xeroderma pigmentosum complementation group A (XPA) on its interaction with Xeroderma pigmentosum complementation group E (XPE). Current Science, 2022 (Manuscript submitted)

**In addition, this thesis also contains unpublished data.**

## CONFERENCE PROCEEDINGS

1. Pradhan, S., Das, P., and Mattaparthi, V. S. K. Characterizing the binding interactions between DNA binding proteins, XPA and XPE: A molecular dynamics approach. Assam Science Festival 2019, March 23<sup>rd</sup>-25<sup>th</sup>, 2019, Assam Science, Technology and Environment Council in collaboration with Tezpur University, Tezpur, Assam, India. (Poster Presentation).
2. Participated in the National Workshop on “Whole Genome Data Analysis using Computational Framework and Tools” organized by DBT supported Bioinformatics Infrastructure Facility Department of Molecular Biology and Biotechnology, Tezpur University, Tezpur, Assam, India on 24<sup>th</sup>-25<sup>th</sup> January, 2019.
3. Participated in the Institutional Biotech Hub seminar on “Careers in Science and Biotechnology” sponsored by DBT, GoI and was held on 27<sup>th</sup> March, 2018 at Tezpur University, Tezpur, Assam, India.
4. Participated in the National Workshop on “Whole Genome Data Analysis using Computational Framework and Tools” organized by DBT supported Bioinformatics Infrastructure Facility Department of Molecular Biology and Biotechnology, Tezpur University, Tezpur, Assam, India on 24<sup>th</sup>-25<sup>th</sup> January, 2019.
5. Pradhan, S. and Mattaparthi, V. S. K. “Structural Dynamics and Interactions of Xeroderma Pigmentosum complementation group A (XPA) with UV-Damaged DNA”. International conference on “Emerging Trends in Chemical Sciences” (ETCS-2018) held at Department of Chemistry, Dibrugarh University, Assam, India, held on 26<sup>th</sup> -28<sup>th</sup> February, 2018. (Poster presentation)
6. Participated as a core committee member and attended lecture series and hands-on training on International Seminar cum Workshop on “Computer Aided Drug Design for Human Pathogen” at Department of Molecular Biology and Biotechnology, Tezpur University, Tezpur, Assam, India, held on 12<sup>th</sup>-17<sup>th</sup> February, 2018.
7. Pradhan, S. and Mattaparthi, V. S. K. “Structural Dynamics and Interactions of Xeroderma Pigmentosum complementation group A

## CONFERENCE PROCEEDINGS

- (XPA) with UV-Damaged DNA". Research conclave on "Recent Innovations in Science and Engineering 2017" at NIT Silchar, Assam, India held on 24<sup>th</sup> - 26<sup>th</sup> March 2017. (Oral Presentation)
8. Attended a National workshop on "Basic Bioinformatics Tools and Techniques in Structural Biology" held on March 18-19<sup>th</sup>, 2017 at Tezpur University, Tezpur, Assam, India.
  9. Attended a National workshop on "Networks in Biological Systems" held on February 18-19<sup>th</sup>, 2017 at Tezpur University, Tezpur, Assam, India.
  10. Sarma, H., Pradhan, S., and Mattaparthi, V. S. K. Unveiling the transient Protein-Protein interactions that modulate the activity of Estrogen Receptor (ER)- $\alpha$  by Human Lemur Tyrosine Kinase-3 (LMTK3) domain: An *in silico* study, 9<sup>th</sup> North-East Bioinformatics Network (NEBInet) Annual Meet, Tezpur University, Tezpur, Assam, India held on 17<sup>th</sup> 19<sup>th</sup> January, 2017. (Poster Presentation)
