<b>Abstract</b>	<b>i</b>
<b>Declaration by Candidate</b>	<b>ix</b>
<b>Certificate by the Supervisor</b>	<b>xi</b>
<b>Certificate by the External Examiner</b>	<b>xiii</b>
<b>Acknowledgements</b>	<b>xv</b>
<b>List of Figures</b>	<b>xviii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 An overview on laser-driven particle accelerators . . . . .	2
1.2 Current and prospective applications of laser-driven ions . . . . .	3
1.3 Electromagnetic waves in Plasma . . . . .	9
1.3.1 Single electron interaction with a laser field . . . . .	12
1.4 Ponderomotive force and potential . . . . .	15
1.5 Relativistic laser effects . . . . .	18
1.6 Ultrashort intense laser pulses . . . . .	19
1.7 Laser absorption mechanisms in plasma . . . . .	21
1.7.1 Inverse bremsstrahlung heating . . . . .	22
1.7.2 Resonance absorption . . . . .	22
1.7.3 Vacuum/Brunel heating . . . . .	24
1.7.4 $J \times B$ heating . . . . .	24
1.8 Ion acceleration due to laser-plasma interactions . . . . .	25
1.8.1 Target Normal Sheath Acceleration . . . . .	26
1.8.2 Radiation Pressure Acceleration . . . . .	29
1.8.3 Collisionless Shock Acceleration . . . . .	34
1.8.4 Breakout Afterburner: Relativistically transparent targets . . . . .	35
1.8.5 Coulomb Explosion . . . . .	37
1.9 Advanced target geometries . . . . .	37
1.10 Methodology: Particle-In-Cell (PIC) simulation . . . . .	39
1.11 Thesis structure . . . . .	45
<b>Bibliography</b>	<b>46</b>
<b>2 Accelerating protons from a mass limited spherical target using an ultrashort laser pulse</b>	<b>60</b>
2.1 Accelerating ions from mass-limited targets . . . . .	61
2.2 Laser-driven electrostatic shock in near-critical plasma . . . . .	63
2.3 PIC simulation model . . . . .	65
2.4 Results and discussions . . . . .	66
2.5 Conclusion . . . . .	76
<b>Bibliography</b>	<b>77</b>

<b>3 Role of density gradients in spherical plasma targets on the generation of fast proton beams</b>	<b>82</b>
3.1 Motivation and background of the study . . . . .	83
3.2 Simulation model description . . . . .	86
3.3 Results and discussions . . . . .	87
3.3.1 Effect of a secondary laser pulse/ pre-pulse . . . . .	87
3.3.2 Radially linear target density distribution . . . . .	91
3.3.3 Effect of peak target density . . . . .	95
3.3.4 Radially Gaussian density distribution . . . . .	99
3.3.5 Influence of density inhomogeneity . . . . .	102
3.4 Conclusion . . . . .	105
<b>Bibliography</b>	<b>107</b>
<b>4 Anisotropic expansion in a Gaussian density plasmasphere due to intense laser irradiation</b>	<b>112</b>
4.1 Plasma expansion due to interaction with a laser pulse . . . . .	113
4.2 Simulation parameters . . . . .	115
4.3 Results and discussions . . . . .	116
4.4 Conclusion . . . . .	120
<b>Bibliography</b>	<b>122</b>
<b>5 Density gradients and the associated proton acceleration mechanisms in a laser exploded Gaussian-shaped plasma microsphere</b>	<b>124</b>
5.1 Motivation and background of the study . . . . .	125
5.2 PIC simulation model . . . . .	127
5.3 Effect of density gradients . . . . .	129
5.3.1 Target with low density gradients . . . . .	130
5.3.2 Target with intermediate density gradients . . . . .	131
5.3.3 Target with high density gradients . . . . .	138
5.4 Comparison between the different acceleration regimes . . . . .	142
5.5 Proton energy scaling . . . . .	143
5.6 Conclusion . . . . .	144
<b>Bibliography</b>	<b>146</b>
<b>6 Summary and Future Prospects</b>	<b>152</b>
6.1 Chapter-wise Summary . . . . .	152
6.2 Future Outlook and Prospects . . . . .	155
<b>Bibliography</b>	<b>156</b>
