

# Table of contents

<b>Abbreviations</b>	<b>xiii</b>
<b>List of figures</b>	<b>xix</b>
<b>List of tables</b>	<b>xxv</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Current status of neutrinos: . . . . .	4
1.1.1 Theoretical Aspect: . . . . .	4
1.1.2 Experimental progress . . . . .	5
1.2 The Standard Model of particle physics . . . . .	9
1.2.1 The Electroweak sector . . . . .	10
1.2.2 Origin of gauge boson and and fermion mass: . . . . .	12
1.3 Drawbacks of the Standard Model . . . . .	15
1.4 Beyond Standard Model(BSM) Framework . . . . .	17
1.4.1 Neutrino mass . . . . .	17
1.4.2 Neutrino flavor oscillation in vacuum . . . . .	17
1.4.3 Neutrino flavor oscillation in matter . . . . .	19
1.4.4 Type of neutrino mass: Dirac and Majorana . . . . .	20
1.4.5 Mechanisms of neutrino mass generation . . . . .	22

1.4.6	Lepton number violation: neutrinoless double beta decay: . . . . .	31
1.4.7	Baryon Asymmetry of the Universe(BAU) . . . . .	33
1.4.7.1	Leptogenesis . . . . .	35
1.4.8	Lepton flavor violation . . . . .	36
1.4.9	Dark matter . . . . .	38
1.4.9.1	Sterile neutrino: A viable dark matter candidate . . . . .	40
1.4.10	Discrete flavor symmetry in particle physics: . . . . .	41
1.4.10.1	Properties of $A_4$ group . . . . .	42
1.5	Thesis outline . . . . .	44
<b>2</b>	<b>Connecting neutrinoless double-beta decay and lepton flavor violation in discrete flavor symmetric left-right symmetric model</b>	<b>47</b>
2.1	Introduction: . . . . .	48
2.2	A left right flavor symmetric model: . . . . .	49
2.2.1	Type-I dominance: . . . . .	50
2.2.2	Type-II dominance: . . . . .	52
2.3	Neutrinoless double beta decay(NDBD)in LRSM: . . . . .	53
2.4	Lepton flavor violation: . . . . .	57
2.5	Numerical analysis and Results: . . . . .	59
2.5.1	Standard light neutrino contribution: . . . . .	59
2.5.2	New physics contribution to NDBD: . . . . .	63
2.5.3	Scalar triplet contribution to NDBD: . . . . .	64
2.5.4	Correlating LFV and neutrino mass . . . . .	65
2.6	Summary . . . . .	66
<b>3</b>	<b>Phenomenological study of neutrinoless double beta decay and sterile dark matter in extended left right symmetric model</b>	<b>69</b>

3.1	Introduction . . . . .	70
3.2	LRSM with extended seesaw with type-II dominance: . . . . .	72
3.3	Flavor symmetric realization of extended LRSM with type-II dominance: . . . . .	75
3.4	Neutrinoless Double beta decay in extended LRSM: . . . . .	78
3.5	Light sterile neutrino in extended LRSM : . . . . .	80
3.6	Numerical results and analysis: . . . . .	82
3.7	Summary . . . . .	93
<b>4</b>	<b>Lepton flavor violation and leptogenesis in <math>A_4</math> based discrete flavor symmetric radiative seesaw model</b>	<b>95</b>
4.1	Introduction: . . . . .	96
4.2	Radiative seesaw Model . . . . .	98
4.3	Flavor Symmetric realization of radiative seesaw model: . . . . .	101
4.4	Lepton flavor violating processes : . . . . .	105
4.5	Leptogenesis . . . . .	109
4.6	Numerical Analysis . . . . .	112
4.7	Summary . . . . .	121
<b>5</b>	<b>Conclusion and future prospectives:</b>	<b>123</b>
5.1	Conclusion . . . . .	124
5.1.1	Chapter 2 . . . . .	124
5.1.2	Chapter 3 . . . . .	125
5.1.3	Chapter 4 . . . . .	126
5.2	Future prospectives . . . . .	127
<b>A</b>	<b>Appendix</b>	<b>129</b>
A.1	Loop functions of lepton flavor violation and VEV alignments of flavons . . . . .	129
A.1.1	Potential and vev alignment in the LRSM . . . . .	130

A.1.2 VEV alignments of flavons in the scotogenic model . . . . . 132

**Bibliography** **135**
