

Table of Contents

a. Abstract	i-vi
b. Declaration	
c. Certificate	
d. Dedication	
e. Acknowledgements	
f. Table of Contents	vii-xii
g. List of Figures	xiii-xx
h. List of Abbreviations	xxi-xiii
i. List of Symbols	xxiv
Chapter 1: Introduction	1-28
1.1 History of Carbon Nitride	1
1.1.1 Structure of g-C ₃ N ₄	3
1.1.2 Functional characteristics of g-C ₃ N ₄	4
1.2 Role of Dimensionality in the era of Nanotechnology	5
1.2.1 3D Architecture of g-C ₃ N ₄	7
1.2.2 g-C ₃ N ₄ in its OD quantum dots dimensionality	8
1.2.3 1D tube/rod/wire arrangement of g-C ₃ N ₄	9
1.2.4 2D nanosheets with lamellar structure	11
1.3 Intelligent Surface and interface engineering of g- C ₃ N ₄	13
1.3.1 Engineering with Non-Metal Doping	14
1.3.2 Enhancing the functionalities with Metal Doping	16
1.3.3 Creating heterointerface for achieving brilliant performances	17
1.4 Motivation behind this work	18
1.5 Objective of This Thesis	20

References	23
Chapter 2 : Surface engineered porous magnetic graphitic sheets for rapid and efficient recovery of oil	29-48
2.1 Introduction	30
2.2 Chemicals and materials used	31
2.2.1 Preparation of FeNi ₃	32
2.2.2 Preparation of graphitic carbon nitride (g-C ₃ N ₄) sheet	32
2.2.3 Preparation of composite g-C ₃ N ₄ @FeNi ₃	32
2.2.4 Surface modification of the prepared Nanocomposite	33
2.2.5 Crude oil	33
2.3 Results and Discussion	33
2.3.1 Microstructure and Surface morphology	33
2.3.2 Porosity and surface area analysis	36
2.3.3 Contact Angle analysis	37
2.3.4 GC-MS analysis	39
2.4 Adsorption Kinetics	39
2.5 Adsorption Isotherm	41
2.6 Oil recovery and Reusability	42
2.7 Computational Details	43
2.7.1 Atomic configuration of the system	43
2.7.2 Electronic structure of the system	44
2.8 Conclusions	45
References	46
Chapter 3: Two dimensional heterostructure for efficient quantum energy storage as in-plane micro-supercapacitor	49-74
3.1 Introduction	50
3.2 Methods	52

3.2.1	Development of 2D g-C ₃ N ₄ @FeNi ₃ heterostructure	52
3.2.2	Materials Characterization	52
3.3	Results and discussion	52
3.3.1	Microstructural and Surface Morphology Analysis	52
3.4	Electrochemical properties	54
3.4.1	Cyclic voltammetry	54
3.4.2	Galvanostatic charge discharge (GCD)	55
3.4.3	Impedance Spectroscopy	57
3.4.4	Cyclic performances	59
3.5	Device Strategy	60
3.6	Theoretical Analysis	62
3.6.1	Density functional theory calculation	62
3.6.2	Quantum Capacitance Calculation	62
3.7	Results and Discussions	64
3.7.1	Geometrical optimization	64
3.7.2	Local densities of states (LDOS)	66
3.7.3	Projected density of states (PDOS)	67
3.7.4	Quantum capacitance	68
3.8	Conclusion	69
	References	70
Chapter 4: Reinforcing 2D heterostructure to design efficient and sustainable film for food packaging		75-94
4.1	Introduction	76
4.2	Methods and Methodology	77
4.2.1	Chemicals and materials used	77
4.3	Experimental synthesis	78
4.3.1	Synthesis of 2D/2D g-C ₃ N ₄ @CuSe heterostructure	78

4.3.2	Synthesis of composite film embedding 2D/2D heterostructure within polymer matrix	78
4.4	Results and discussion	79
4.4.1	Structural and Surface Morphology	79
4.4.2	Thermal properties	80
4.4.3	Barrier properties	82
4.4.4	Mechanical properties	83
4.4.5	Contact Angle	85
4.4.6	Antimicrobial properties	86
4.4.7	Ion Migration Analysis	87
4.4.8	Degradation phenomena	89
4.4.9	Shelf Life study	90
4.5	Conclusion	91
	References	92
Chapter 5: Band alignment 2D/2D heterojunction for excellent sunlight-driven photo catalytic dye degradation		95-120
5.1	Introduction	96
5.2	Methods and Methodology	98
5.3	Experimental	98
5.3.1	Chemicals and materials used	98
5.3.2	Synthesis of 2D/2D gC_3N_4 -CuSe heterostructure	98
5.4	Results and discussion	98
5.4.1	Structural and morphology studies	98
5.4.2	Spectroscopy Analysis	101
5.4.3	Photocatalytic activity	103
5.4.4	Kinetics and Surface Charge analysis	106
5.5	Theoretical Analysis	107
5.6	Computational Set-up	107
5.6.1	Electronic Structure Studies	108

5.6.2	Charge Density	109
5.6.3	Atomic Orbital Projection Analysis	110
5.6.4	Investigating the Band Alignment	112
5.6.5	Intrinsic uncertainty via proximitized hetero interface	114
5.7	Conclusion	116
	References	117
Chapter 6: Fluorescence guided Superparamagnetic g-C₃N₄@FeNi₃-heterostructure for cancer cell imaging and detection		121-140
6.1	Introduction	122
6.2	Methodology	124
6.2.1.	Experimental Details	124
6.2.1.1	Chemicals and materials used	125
6.2.1.2	Development of g-C ₃ N ₄ @FeNi ₃ Nanocomposite	125
6.2.1.3	PEG functionalized g-C ₃ N ₄ @FeNi ₃ Nanocomposite	125
6.2.2.	Biological assays	125
6.2.2.1.	Cell culture	125
6.2.2.2.	Cytotoxicity assays	126
6.2.2.3	In vitro nanocomposite characterization	126
6.2.2.4	Confocal microscopy imaging of g-C ₃ N ₄ @FeNi ₃	126
6.3	Results and discussion	127
6.3.1	Microstructural and Morphology	127
6.3.2	Magnetic Property	128
6.3.3	UV and PL Analysis	129
6.3.4	Thermal and Surface charge Analysis	131
6.3.5	Biological properties	133
6.4	Conclusion	135

References	136
Chapter 7: Conclusion and Future outlooks	141-145
7.1 Thesis conclusions	141
7.2 Future prospects	143
Appendices	A1-A2
List of publications	B1-B3
