Abstract	i
1 Introduction and Preliminaries	1
1.1 Notations and Results from Graph Theory	2
1.2 Notations and Results from Group Theory	6
1.2.1 Commuting probability and solvability degree	8
1.3 Graphs defined on Groups	9
1.3.1 Commuting and non-commuting graph	10
1.3.2 Nilpotent and non-nilpotent graph	12
1.3.3 Solvable and non-solvable graph	13
1.3.4 Conjugacy class graphs	13
2 Genus of commuting graphs	17
2.1 Genus of $\mathcal{C}(G)$	17
2.2 Some consequences	23
3 Solvable graphs of finite groups	32
3.1 Graph realization	32
3.2 Genus and diameter	34
3.3 Relations with solvability degree	40
4 Non-solvable graphs of groups	43
4.1 Vertex degree and cardinality of vertex degree set	43
4.2 Graph realization	46
4.3 Domination number and vertex connectivity	48
4.4 Independence Number	49
4.5 Clique number of non-solvable graphs	51

4.6	Groups with the same non-solvable graphs	55
4.7	Genus of non-solvable graph	57
5	Various spectra and energies of commuting conjugacy class graph of groups	60
5.1	Various spectra and energies	61
5.2	Comparing various energies	90
5.3	Hyperenergetic and borderenergetic graph	103
6	Genus of commuting conjugacy class graphs of groups	124
6.1	Genus of $\mathcal{CCC}(G)$	124
7	Solvable conjugacy class graph of groups	140
7.1	Certain properties of SCC-graph	140
7.2	Distance in SCC-Graph for locally finite group	144
7.3	Genus of SCC-graph	147
8	Conclusion and problems for future research	154
8.1	Problems for future research	155
