1	Introduction	1
1.1	Image super-resolution	1
1.2	Super-resolution in remote sensing	2
1.2.1	Limitations of remote sensing image SR	3
1.3	SR approaches and their limitations	4
1.4	Fundamentals of single image super-resolution	4
1.4.1	Image acquisition/degradation model	5
1.4.2	Image degradation	6
1.4.3	Super-resolution versus interpolation	7
1.4.4	Super-resolution versus pansharpening	7
1.4.5	Approaches for SR of MS images	8
1.4.6	Evaluation parameters	8
1.5	Sparse representation problem	10
1.6	Sparse representation in image processing	12
1.7	SR model using sparse representation	15
1.8	Motivation of the present work	17
1.9	Contributions from the Thesis	18
1.10	Scope of the work	20
1.11	Thesis outline	21
2	Review of Literature	23
2.1	Introduction	23

2.2	Taxonomy of image SR methods	23
2.2.1	Frequency domain SR methods	24
2.2.2	Spatial domain SR methods	25
2.2.3	Pansharpening methods	28
2.3	Sparse representation-based SR methods	28
2.3.1	Patch sparse representation-based dictionary learning and SR image reconstruction	29
2.3.2	Group sparse representation-based SR image reconstruction	32
2.4	Parallel computing for image super-resolution	34
2.4.1	OpenMP-based parallel implementation	34
2.4.2	GPGPU-based parallel implementation	36
2.5	Remote sensing datasets	36
2.6	Summary and research issues	37
2.6.1	In dictionary learning	38
2.6.2	In SR reconstruction	38
3	Development of Pansharpening-based Fast MS Image SR using Sparse Representations	40
3.1	Introduction	40
3.2	Fast SISR using sparse representations and multicore processing	41
3.2.1	Introduction	41
3.2.2	Proposed method	42
3.2.3	Speed-up using multicore parallel processing	45
3.2.4	Experiments and results	47
3.3	Parallel MS image SR based on sparse representations	51

3.3.1	Introduction	51
3.3.2	MS image sparse overcomplete dictionary learning	51
3.3.3	Super-resolution image reconstruction	54
3.3.4	Multicore parallel implementation	57
3.3.5	Experiments and results	57
3.4	Pansharpening-based spatial/spectral SR of MS images	62
3.4.1	Proposed method	64
3.4.2	Experiments and Results	67
3.5	Conclusion	69
4	Development of Morphological Component Analysis Features-based Sparse Representation Technique for MS Image SR	71
4.1	Introduction	71
4.2	MCA-based image decomposition	73
4.3	PCA-based band selection	74
4.4	Proposed method	77
4.4.1	Dictionary learning using PCA and MCA	77
4.4.2	SR reconstruction based on MCA and sparse representation	80
4.5	Parallel implementation	82
4.6	Results and discussion	82
4.6.1	Performance evaluation and comparisons	82
4.6.2	Spectral signature comparisons	93
4.6.3	End-members identification via spectral unmixing	94
4.6.4	Speed-up calculation	95

4.6.5	Effect of dictionary size	97
4.6.6	Regularization parameter dependency	97
4.7	Conclusion	98
5 JAMiSR- Joint Adaptive Multispectral Image Super-resolution via Sparse Representations and its Applications		99
5.1	Introduction	99
5.1.1	Patch sparse representation (PSR)	100
5.1.2	Group sparse representation (GSR)	101
5.2	Joint Sparse Representation (JSR)	103
5.3	Adaptive versus global dictionary learning	104
5.4	Proposed method	105
5.4.1	Self-adaptive group dictionary training	106
5.4.2	Joint sparse reconstruction-based SR	108
5.5	Results and discussions	110
5.5.1	Performance evaluation and comparisons	110
5.5.2	Comparison with deep learning-based SR methods	120
5.5.3	Remote sensing applications of the proposed method	128
5.5.4	Parallel implementation using GPGPU hardware	131
5.5.5	Conclusion	133
6 Conclusions and Future Scopes		135
6.1	Summary	135
6.2	Future research scopes	136
