<i>List of notations and abbreviation</i>	xiv
<b>1. Introduction.....</b>	<b>1</b>
1.1 Introduction .....	1
1.2 Scope of work.....	5
1.3 Aim and objectives.....	6
1.4 Thesis structure .....	7
<b>2. Review of Literature .....</b>	<b>9</b>
2.1 Food product development vis-a-vis innovation .....	9
2.2 Food service sector vis-a-vis food engineering .....	10
2.3 Gastronomy in food innovation .....	11
2.4 Computational aspects in gastronomy .....	12
2.5 Computational gastronomy with digital data .....	13
2.6 Utility of non-digital data in computational gastronomy.....	14
2.7 Flavour network theory in the development of computational gastronomy .....	16
2.8 Tools for analytics and visualization .....	17
2.9 Food analytics for innovation .....	18
2.10 Generative models for food innovation .....	20
2.11 Lifestyle disease, dietary restriction and need for alternate recipe .....	22
2.12 Innovation towards developing foods based on consumer's needs.....	23
2.13. Computational gastronomy-based food design and recipe recommendation .....	25
2.14 Chapter summary .....	28
<b>3. Materials and Methods .....</b>	<b>31</b>
3.1 Materials .....	31
3.1.1 Data collection .....	31
3.1.1.1 Recipe .....	31
3.1.1.2 Ingredients .....	32
3.1.1.3 Flavour compound .....	34

3.1.2 Software implementation .....	35
3.1.2.1 Cytoscape as a tool for flavour network visualization.....	35
3.1.2.2 Data compilation and data analysis using python programming .....	40
<b>3.2 Methodology to characterize and analyse traditional food recipes for ingredient pairing behaviour .....</b>	<b>47</b>
3.2.1 Statistical analysis for ingredient pairing behaviour .....	47
3.2.1.1 Classification of cuisine.....	47
3.2.1.2 Authenticity of ingredients .....	48
3.2.1.3 Ingredient pairing behaviour .....	48
3.2.1.4 Random recipe generation .....	51
3.2.1.5 Contribution of ingredients .....	52
<b>3.3 Methodology to apply data-driven similarity analysis for intra- and inter-regional cuisine similarities .....</b>	<b>52</b>
3.3.1 Framework for flavour network data analysis.....	52
3.3.1.1 Ingredient-compound bipartite network .....	52
3.3.1.2 Extraction of the backbone of flavour network .....	52
3.3.1.3 Principle of flavour network theory .....	53
3.3.2 Quantifying similarity between cuisines .....	53
3.3.2.1 Clustering of regional cuisine.....	53
3.3.2.2 Cosine similarity .....	54
<b>3.4 Methodology for generation of recipe compositions based on identified consumer preference for ingredient pairing.....</b>	<b>55</b>
3.4.1 Data-driven models.....	55
3.4.1.1 Theory.....	55
3.4.1.2 Approach .....	55
<b>3.5 Methodology for developing ingredient combinations for a food product with customized specifications with the application of the flavour network theory .....</b>	<b>57</b>
3.5.1 Theory .....	57
3.5.2 Approach .....	58
<b>3.6 Chapter summary .....</b>	<b>59</b>
<b>4. Results and Discussion .....</b>	<b>61</b>
<b>4.1 Characterising and analysing traditional food recipes for ingredient pairing.....</b>	<b>61</b>
4.1.1 Data on recipes and flavour compounds .....	61
4.1.1.1 Recipe data for regional cuisines .....	61
4.1.1.2 Datasets on edible ingredients and flavour compound .....	62
4.1.2 Characteristics of the regional cuisines from the Northeast states.....	64
4.1.2.1 Average recipe size and ingredient frequency.....	64

4.1.2.2 Prevalence of ingredients .....	64
4.1.3 Ingredient authenticity.....	66
4.1.3.1 Authentic ingredients from the Northeast cuisines .....	66
4.1.3.3 Flavour sharing among authentic ingredients .....	67
4.1.3.2 Flavour pyramid of authentic ingredients .....	68
4.1.4 Flavour profiles and sharing of compounds among ingredients .....	70
4.1.4.1 Characteristics of randomized cuisines .....	70
4.1.4.2 Flavour sharing among ingredients of recipes.....	72
4.1.5 Ingredient contribution to food pairing behaviour.....	73
4.1.6 Summary on food pairing behaviour .....	79
<b>4.2 Application of data-driven analysis for intra- and inter-cuisine similarities .....</b>	<b>80</b>
4.2.1 t-SNE clustering.....	81
4.2.2 Flavour network-based visualization of similarities.....	83
4.2.2.1 Ingredient- compound bipartite network.....	83
4.2.2.2 Ingredient flavour network.....	84
4.2.3 Cosine similarities for recipes of the regional cuisines .....	88
4.2.3.1 Cosine similarity analysis within Northeast regional cuisine .....	88
4.2.3.3 Cosine similarity analysis with western countries and east Asian countries.....	90
4.2.3.4 Flavour network plot for higher cosine similarity value at recipe level .....	91
4.2.4 Summary of findings from similarity analysis.....	93
<b>4.3 Generation of recipe composition based on identified consumer preference for ingredient pairing .....</b>	<b>94</b>
4.3.1 Recipe generation based on flavour network of pre-existing recipe data .....	94
4.3.1.1 Theory.....	94
4.3.1.2 Approach .....	94
4.3.1.3 New recipe preparation.....	95
4.3.1.4 Sensory analysis of new recipe .....	96
4.3.1.5 Similarity analysis of new recipe using cosine similarity .....	97
4.3.2 Recipe generation from flavour network of khichdi recipe .....	98
4.3.2.1 New recipe validation using Cosine similarities.....	100
4.3.3 Recipe generation based on data-driven models.....	102
4.3.4 Summary of findings on recipe generation .....	104
<b>4.4 Development of alternative recipe by ingredient replacement for customised specifications with the application of flavour network theory .....</b>	<b>105</b>
4.4.1 Ingredient combinations for a food product.....	105
4.4.2 Validation using cosine similarity.....	107

4.5 Chapter summary.....	108
<b>5. Summary and Conclusion.....</b>	<b>110</b>
5.1 Summary.....	110
5.2 Conclusion.....	113
5.3 Limitations and scope for future works .....	114
<b>References</b>	<b>116</b>
<b>Appendices</b>	<b>124</b>
