a. Abstract	i-v
b. Declaration	vi
c. Certificate	vii
d. Certificate II	viii
e. Acknowledgements	ix-x
f. Dedication	xi
g. Contents	xii-xv
h. List of Figures	xvii-xxii
i. Nomenclatures	xxiii-xxv
Chapter 1: Introduction	1-31
1.1 Magnetism in low-dimension	1
1.2 van der Waals quantum systems	6
1.2.1 Graphene	6
1.2.2 Chromium tribromide (CrBr ₃)	7
1.2.3 Transition metal dichalcogenides (TMDs)	8
1.3 From Bulk to proximitized material	9
1.3.1 Direct exchange coupling	10
1.3.2 Charge Transfer	11
1.4 Induced magnetism in non-magnetic layered materials	11
1.5 Interfacial Engineering using proximity effect	13

1.6 Applications related to proximity effect	15
1.6.1 Magnetic Tunnel Junction (MTJ)	16
1.6.2 Spin Lasers	17
1.6.3 Spin-logics	18
1.6.4 Field effect transistors (FET)	19
1.7 Objectives of the thesis	20
Chapter 2: Theoretical Methods and Methodology	32-54
2.1 Density functional theory (DFT) methods	32
2.1.1 Hohenberg-Kohn Theorems	34
2.1.2 Kohn-Sham approach	35
2.1.3 Exchange-Correlation term	36
2.1.4 Local density approximation (LDA)	37
2.1.5 Generalized gradient approximation (GGA)	38
2.1.6 The plane-wave pseudopotential approach	39
2.1.7 The projector augmented wave (PAW) method	42
2.1.8 van der Waals interaction in DFT	43
2.1.9 Coulomb interaction in DFT	44
2.2 Wannier tight binding Hamiltonian method (WTBH)	46
2.2.1 Modelling of Wannier tight binding Hamiltonian method (WTBH)	47
2.3 Concluding Remarks	48
Chapter3: Proximity effects in graphene and ferromagnetic CrBr₃ van der Waals heterostructure	55-75

3.1	Introduction	55
3.2	Model and Computational details	57
3.3	Result and Discussions	58
3.3.1	Ground state optimization	58
3.3.2	Electronic Structure	60
3.3.3	Charge and Spin density distribution	62
3.3.4	Modulation of electronic structure with applied electric field	64
3.3.5	Ballistic transport behaviour	67
3.3.6	Single-gate Field-effect transistor device model	69
3.4	Concluding remarks	70
Chapter 4: Magnetic proximity induced Valley contrasting quantum anomalous Hall effect in Gr-CrBr₃ van der Waals heterostructure		76-96
4.1	Introduction	76
4.2	Model and Computational details	78
4.3	Result and Discussions	80
4.3.1	Ground state crystal geometry	80
4.3.2	Electronic structure	81
4.3.3	Electric field variation of Band topology and local potential distribution	84
4.3.4	Topological properties	86
4.3.5	Anomalous Hall behaviour	89
4.4	Concluding remarks	91
Chapter 5: Proximity induced longitudinal and transverse thermoelectric effect in Gr-CrBr₃ van der Waals heterostructure		97-121
5.1	Introduction	97
5.2	Model and Computational details	100
5.3	Result and Discussions	101
5.3.1	Thermodynamic stability	101

5.3.2	Electronic property	102
5.3.3	Conductance	104
5.3.4	Thermoelectric behaviour	105
5.3.5	Anomalous Nernst Effect (ANE)	112
5.3.6	Variation of electric field in thermoelectric behaviour	113
5.3.7	Device prototype	115
5.4	Concluding remarks	116
Chapter 6: Robust Magnetic proximity effect induced adaptive Half-metallicity in Weyl semimetal-ferromagnet van der Waals heterostructure		122-145
6.1	Introduction	122
6.2	Model and Computational details	124
6.3	Result and Discussions	125
6.3.1	Geometry optimization	125
6.3.2	Electronic Structure	128
6.3.3	Modulation of electronic structure with applied electric field	131
6.3.4	Electrical conductivity	134
6.3.5	Proposed device prototype	137
6.4	Concluding remarks	139
Chapter 7: Concluding remarks and future prospects		146-150
7.1	Thesis conclusions	146
7.2	Future prospects	149
Appendix A		151-157
Appendix B		158-159
