1 Introduction **1**

1.1 Introduction 1

1.2 Motivation 11

1.3 Thesis Contribution 13

1.4 Thesis Organization 17

2 Literature Review **19**

2.1 Summary of the literature review and research gap found 35

3 Feature descriptors based on NSST for remote sensing image retrieval **37**

3.1 RSIR via SNIG modeling of NSST coefficients 38

3.1.1 Methodology 39

3.1.1.1 Non subsampled shearlet transform (NSST) 39

3.1.1.2 Proposed methodology 44

3.1.2 Experimental results 50

3.1.2.1 Datasets considered 50

3.1.2.2 Performance evaluation measures 52

3.1.2.3 Distance measures used for similarity assessment . 54

3.1.2.4 Results obtained 55

3.2 RSIR based on 3D-LTP features and NSST domain statistical features 61

3.2.1 Methodology 62

3.2.1.1 Calculation of NSST domain statistical features (NSSTds) 62

3.2.1.2 Computation of Inter-channel 3D-LTP features . . 68

3.2.1.3 Fusion of NSSTds and 3D-LTP features 71

3.2.2 Experimental results and discussion 72

3.3 Summary 78

4 NSST domain feature descriptors that uses bit-plane decomposition for biomedical image retrieval 81

4.1 Biomedical image retrieval using local bit-plane based dissimilarities and adder pattern in NSST domain (NSST-LBPDAP) 82

4.1.1 Methodology 82

4.1.2 Incorporation of non-linearity 83

4.1.3 Bit-plane decomposition 84

4.1.4 Local bit-plane based dissimilarities and adder pattern(LBPDAP) 86

4.1.5 Construction of final feature vector 89

4.1.6 Experimental results and discussion 90

4.1.6.1 Datasets considered 90

4.1.6.2 Performance Evaluation Measures 90

4.1.6.3 Experimental results obtained for considered datasets 92

4.2 Local bit-plane neighbour dissimilarity pattern in NSST domain for bio-medical image retrieval (NSST-LBNDP) 99

4.2.1 Methodology 99

4.2.2 Feature vector formation 103

4.2.3 Experimental results obtained for considered datasets 105

4.3 Summary 109

5 Biomedical image retrieval in NSST domain using shape and texture features 112

5.1 Biomedical image retrieval using ZMs and NSST domain maximum of subbands local directional edge pattern 113

5.1.1 Methodology 113

5.1.1.1 Global shape feature extraction using ZM 114

5.1.1.2 Local texture feature extraction from NSST detail subbands using maximum of subbands local directional edge pattern (NSST-MSLDEP) 116

5.1.1.3 Local texture feature extraction from NSST approximation subband using 'uniform' LBP 119

5.1.1.4 Final feature vector formation 120

5.1.1.5 ZM-NSST-MSLDEP based framework for image retrieval 120

5.1.2 Experimental Results obtained for considered dataset . . . 121

5.2 Biomedical image retrieval based on ZMs and SVD-weibull distribution modelling in NSST domain 128

5.2.1 Methodology 128

5.2.1.1 Texture feature extraction from image NSST detail subbands by modelling the singular values obtained from singular value decomposition 129

5.2.1.2 Singular value decomposition (SVD) 130

5.2.1.3 Statistical modelling of pdf of singular values . . . 130

5.2.1.4 Formation of final feature vector 133

5.2.2 Experimental Results obtained for considered datasets . . . 134

5.3 Comparison of all the proposed NSST domain feature descriptors for biomedical image retrieval 139

5.4 Summary 142

6 Conclusions and Future scope **144**

6.1 Concluding remarks 144

6.2 Future scope of research 148

Publications **169**
