<b>CHAPTER 1: Introduction</b>		1-17
1.1.	Freshwater mud eel ( <i>Monopterus albus</i> )	2
1.2.	Habitat	2
1.3.	Morphology	2
1.4.	Systematic position	3
1.5.	Reproductive cycle	4
1.5.1.	Male Reproductive cycle	4
1.5.1.1.	Spermatogonia	4
1.5.1.2.	Spermatocytes	4
1.5.1.3.	Spermatids	4
1.5.1.4.	Spermatozoa	4
1.5.2.	Female reproductive cycle	4
1.5.2.1.	Oogenesis	4
1.5.2.2.	Oogonia	5
1.5.2.3.	Previtellogenic oocyte	5
1.5.2.3.1.	Early perinucleolus stage	5
1.5.2.3.2.	Late perinucleolus stage	5
1.5.2.4.	Vitellogenesis	5
1.6.	Food habit and the enzyme present in <i>M. albus</i>	6
1.7.	Therapeutic value	6
1.8.	Economic importance	6
1.9	Application of enzyme in industries: A green approach	7
1.9.1.	Freshwater mud eel gut bacterial enzyme: Protease	7
1.9.2.	Classification of proteases	8

---

1.9.3.	Exopeptidase	8
1.9.3.1.	Carboxypeptidases	8
1.9.3.2.	Aminopeptidase	8
1.9.4.	Endopeptidase	9
1.9.4.1.	Serine Protease	9
1.9.4.2.	Cysteine protease	9
1.9.4.3.	Metalloproteases	9
1.9.4.4.	Aspartic proteases	10
1.9.5.	Sources of proteases	10
1.9.5.1.	Microbial protease	10
1.9.5.2.	Plant protease	10
1.9.5.3.	Animal protease	11
1.9.6.	Application of protease in various industries	11
1.9.6.1.	Detergent industry	12
1.9.6.2.	Leather industry	13
1.9.6.3.	Proteases in other industries	14
1.9.6.3.1.	Food industry	14
1.9.6.3.2.	Pharmaceutical industry	15
1.9.6.3.3.	Photographic industry	16
1.9.6.3.4.	Silk degumming	16
1.10.	Objectives	17
<b>CHAPTER 2: Review of Literature</b>		<b>18-32</b>
2.1.	<i>Monopterus cuchia</i>	19
2.2.	Special physiological characteristics of <i>M. cuchia</i>	19
2.2.1.	Morpho-histochemical adaptation of the digestive tract	19
2.2.2.	Respiratory adaptations	20
2.2.3.	Epidermal adaptations	20
2.3.	Reproductive cycle of the fish	20
2.4.	Nutritional characterization	21
2.5.	Haematological parameters of <i>M. cuchia</i>	23
2.6.	Therapeutic and consumable information of <i>M. cuchia</i>	23
2.7.	Culture of <i>M. cuchia</i>	25
2.8.	Marketing of <i>M. cuchia</i>	26

2.9.	Induced breeding of <i>M. cuchia</i>	27
2.10.	Genetic and Molecular aspects of <i>M. cuchia</i>	27
2.11.	Diseases of <i>M. cuchia</i>	28
2.12.	Toxicological studies and adaptation of the fish to environmental stress	28
2.12.1.	High environmental ammonia (HEA)	29
2.12.2.	Herbicides	29
2.12.3.	Paraquat	29
2.12.4.	Glyphosate	30
2.12.5.	Pesticides	30
2.12.6.	Malathion	30
2.13.	Socioeconomic condition of cuchia catchers	31
2.14.	Use of <i>M. cuchia</i>	32
<b>CHAPTER 3: Materials and Methods</b>		<b>33-50</b>
3.1.	Chemicals and media	34
3.2.	Bacterial strains	34
3.3.	Sample collection and preparation of cuchia intestinal sample	34
3.4.	Isolation of bacteria	34
3.5.	Screening of protease-producing bacteria	35
3.5.1.	Primary screening	35
3.5.2.	Secondary screening	35
3.6.	Identification of the bacteria	35
3.6.1.	Morphological Characteristics	35
3.6.2.	Gram-staining	36
3.6.3.	Biochemical characterization	36
3.6.4.	Molecular identification	36
3.6.4.1.	DNA isolation and 16S rRNA gene amplification	36
3.6.4.2.	Construction of phylogenetic tree	36
3.7.	Optimization of protease production	37
3.7.1.	Protein estimation	37
3.7.2.	Protease Assay	37
3.7.3.	Incubation	37
3.7.4.	pH and temperature	37

---

3.7.5.	Carbon Source	38
3.7.6.	Nitrogen Source	38
3.8.	Industrial applications	38
3.8.1.	Effect of the protease on stain removal	38
3.8.2.	Antimicrobial activity of <i>B. safensis</i> culture supernatant	39
3.9.	Purification of the crude enzyme	39
3.9.1.	Reverse phase (RP)-HPLC analysis of the purified protease	39
3.9.2.	SDS-PAGE	39
3.10.	Characterization of the purified protease	40
3.10.1.	Effect of pH and temperature on protease activity	40
3.10.2.	Effect of inhibitors on the protease activity	40
3.10.3.	Stability of the protease in the presence of surfactant and commercial detergent	40
3.11	Cloning of bacterial protease gene	41
3.11.1.	Isolation and purification of genomic DNA from <i>B. safensis</i> PRN1	41
3.11.2.	Gene identification and amplification	41
3.11.3.	Gel Electrophoresis	41
3.11.4.	Isolation and purification of pET-28a plasmid from <i>E. coli</i>	42
3.11.5.	Restriction digestion and ligation of the gene and pET-28a	42
3.11.6.	Transformation	43
3.11.6.1.	Preparation of competent cell	43
3.11.6.2.	Transformation of the competent cells by heat shock method	43
3.12.	Protein expression and purification of the recombinant protease (rKNBSSP1)	44
3.13.	Analysis of sequence data	45
3.14.	Biochemical characterization of the alkaline serine protease	45
3.14.1.	Electrophoresis	45
3.14.2.	Protease assay and protein measurement	45
3.14.3.	Effect of pH and temperature on the activity of the recombinant protease	45
3.14.4.	Effect of inhibitors and metallic ions on recombinant protease stability	46

---

3.14.5.	Effect of non-ionic surfactants and commercial detergents on enzyme compatibility	46
3.14.6.	Determination of recombinant enzyme kinetics	47
3.15.	<i>In silico</i> analysis of amino acid sequence	47
3.15.1.	3D structure of the trypsin like serine protease	47
3.15.2.	Docking	47
3.15.3.	Analysis of the 3D structure	47
3.15.3.1.	Protein-protein interaction study	47
3.15.3.2.	Binding free energy calculation	48
3.16.	Industrial applications of the recombinant enzyme	48
3.16.1.	Destaining of blood stain from cotton fabric	48
3.16.2.	Dehairing	48
3.17.	Isolation of mgDNA from the intestinal tissue of <i>M. cuchia</i>	48
3.18.	Assessment of cuchia blood	49
3.18.1.	Cuchia blood sample collection	49
3.18.2.	Analysis of blood haematological parameters	49
3.18.2.1.	RBC count	49
3.18.2.2.	Haemoglobin	49
3.18.2.3.	Packed cell volume	49
3.18.2.3.1.	Packed cell volume by wintrobe method	49
3.18.2.4.	Mean cell volume of blood	50
3.18.2.5.	Mean cell haemoglobin	50
3.18.2.6.	Mean cell haemoglobin concentration (MCHC)	50
3.19.	Statistical Analysis	50
<b>Chapter 4: Results</b>		<b>51-84</b>
4.1.	Isolation and screening of protease-producing bacteria from the gut of <i>M. cuchia</i>	52
4.2.	Identification of bacteria	55
4.3.	Optimization of protease production	59
4.3.1.	Duration of incubation	59
4.3.2.	pH and temperature	60
4.3.3.	Carbon and Nitrogen Source	61
4.4.	Industrial applications	62

4.4.1.	Effect of protease on removing blood stain	62
4.4.2.	Antibacterial activity	63
4.5.	Purification of the crude enzyme	64
4.6.	Characterization of purified protease	66
4.6.1.	Effect of pH and temperature on the purified protease activity	66
4.6.2.	Effect of inhibitors on the protease activity	66
4.6.3.	Effect of surfactants and commercial detergents on protease stability	67
4.7.	Isolation and purification of genomic DNA from <i>B. safensis</i>	68
4.7.1	DNA yield and quality	68
4.7.2.	Amplification of protease gene	68
4.7.3.	Electrophoresis	68
4.7.4.	Serine protease gene cloning	69
4.8.	Purification of the serine protease enzyme	71
4.9.	Analysis of amino acid sequence	73
4.10.	Characterization of the purified recombinant enzyme	73
4.10.1.	Influence of pH and temperature on rKNBS <sup>SP1</sup> activity and stability	73
4.10.2.	Influence of inhibitors, oxidizing agents, and non-ionic surfactants	75
4.10.3.	Influence of metallic ions on rKNBS <sup>SP1</sup> stability	77
4.10.4.	Compatibility of rKNBS <sup>SP1</sup> with commercial detergents	77
4.11.	$K_m$ and $V_{max}$ values	78
4.12.	<i>In silico</i> analysis of amino acid sequence	78
4.12.1.	3D structure of the trypsin like serine protease	78
4.12.2.	Docking studies	80
4.13.	Industrial applications of the recombinant enzyme	81
4.13.1.	Blood-stain removal property	81
4.13.2.	Hair removal potential	82
4.14.	Isolation of mgDNA from the intestinal tissue of <i>M. cuchia</i>	83
4.15.	Analysis of blood haematological parameters	83
<b>CHAPTER 5: Discussion</b>		<b>85-95</b>
5.1.	Asiatic mud eel ( <i>cuchia</i> )	86

5.2.	Protease producing bacteria	86
5.3.	Protease production by bacteria	87
5.4.	Media optimization for protease production	87
5.5.	Purification and characterization of protease	89
5.6.	Antibacterial activity of protease	90
5.7.	Recombinant protease	91
5.8.	Characterization of recombinant protease	92
5.9.	Recombinant protease as a bio-additive agent	93
5.10.	Kinetics of recombinant protease	93
5.11.	Bioinformatics and structural biology of recombinant protease	94
5.12.	Industrial application of recombinant enzyme	95
5.13.	Comparative analysis of cuchia and human blood parameters	95
<b>CHAPTER 6: Conclusion</b>		96-97
<b>CHAPTER 7: Summary and Future work</b>		98-100
7.1.	Summary	99
7.2.	Future work	100
<b>BIBLIOGRAPHY</b>		101-126
<b>PUBLICATIONS</b>		127
<b>APPENDIX</b>		I
