a)	Abstract	**i-iv**
b)	Declaration by the candidate	**v**
c)	Certificate of the supervisor	**vi**
d)	Acknowledgement	**vii-ix**
e)	Table of contents	**x-xiii**
f)	List of tables	**xiv**
g)	List of figures	**xv-xix**
h)	List of abbreviations	**xx-xxi**
i)	List of symbols	**xxii**
Chapter I: Introduction		**1-23**
1.1	Overview	**1**
1.2	Layered transition metal dichalcogenides (TMDCs)	**2**
1.2.1	Structure and polymorphism in TMDCs	**2**
1.2.2	Properties	**3**
	1.2.2.1 Electronic	**3**
	1.2.2.2 Optical	**4**
	1.2.2.3 Optoelectronic	**4**
	1.2.2.4 Vibrational	**4**
	1.2.2.5 Chemical	**5**
	1.2.2.6 Enzymatic	**5**
1.2.3	Synthesis of transition metal dichalcogenides	**6**
1.2.4	Applications	**8**
	1.2.4.1 Chemical sensing	**8**
	1.2.4.2 Antipathogenic activity	**9**
1.3	Objectives of the present study	**11**
1.4	Outline of this thesis	**11**
	References	**13**
Chapter II: Synthesis, characterization, and laser-irradiated analysis of semiconducting nanostructured TMDC systems		**24-49**
2.1	Introduction	**24**
2.2	WS_2 and MoS_2 nanosheets	**25**
	2.2.1 Liquid-mediated exfoliation of WS_2 and MoS_2	**25**
	2.2.2 Crystallographic analysis	**26**
	2.2.3 Morphological analysis of WS_2 and MoS_2 nanosheets	**27**

2.2.4 Raman Spectroscopic data analysis of WS_2 and MoS_2 nanosheets **28**
2.2.5 UV-vis spectroscopic data analysis of WS_2 and MoS_2 nanosheets **29**
2.3 Laser assisted phase transition and formation of inorganic fullerene (IF)-like WS_2 nanostructures **30**
2.3.1 Exfoliation of WS_2 **31**
2.3.2 Instrumentation **32**
2.3.3 Results and discussions **32**
2.4 Conclusion **40**
References **41**
Chapter III: Heavy metal ion sensing and mechanisms based on nanostructured WS_2 based system **50-76**
3.1 Introduction **50**
3.2 Experimental details **52**
3.2.1 Synthesis of WS_2 nanosheets **52**
3.2.2 Instrumentation details **53**
3.2.3 Fabrication of sensing unit **53**
3.2.4 Sensor-setup and measurement techniques **54**
3.2.5 Preparations of standard solutions of heavy metal ions **54**
3.3 Results and discussions **54**
3.3.1 X-ray Diffraction (XRD) **54**
3.3.2 Scanning Electron Microscope (SEM) **55**
3.3.3 Raman spectroscopy **55**
3.3.4 Electrical characterizations **55**
3.3.4.1 Effects of heavy metal ions on the *I–V* characteristic graph of the sensor unit **56**
3.3.4.2 Selectivity of the proposed sensor unit **60**
3.3.4.3 Selection of the best conditions for calibration of Zn^{2+} ions **62**
3.3.5 Limit of detection (LOD), Limit of Quantification (LOQ), sensitivity, and linear range of the proposed sensor unit **62**
3.3.6 Reversibility and repeatability **63**
3.3.7 Interference study **63**
3.3.8 Principle of sensing **65**
3.3.9 Comparison with other studies **68**
3.4 Conclusion **69**
References **69**

Chapter IV: Photoconductive attributes of nanostructured WS_2 based resistive system coupled with $^1/_f$ dependent noise **77-93**

4.1 Introduction **77**

4.2 Experimental Details **78**

4.3 Results and discussions **79**

4.3.1 Morphological and crystallographic analysis **79**

4.3.2 Raman Analysis **80**

4.3.3 Electrical characteristics **80**

4.3.3.1 Current-voltage (*I–V*) characteristics of the un-treated resistive unit **80**

4.3.3.2 *I–V* characteristics of a resistive unit at different fabrication stage **81**

4.3.3.3 Nature of the induced noise **82**

4.3.3.4 Effect of different laser sources on electrical characteristics of WS_2/Cu system **83**

4.4 Conclusion **88**

References **89**

Chapter V: Antimicrobial attributes of different nanostructured WS_2 and MoS_2 systems against multiple pathogens **94-117**

5.1 Introduction **94**

5.2 Experimental details **95**

5.2.1 Agar well diffusion assay **95**

5.2.1.1 Preparation of lysogeny broth (LB) and potato dextrose broth (PDB) media **95**

5.2.1.2 Inoculation of LB (Miller) agar and potato dextrose agar media and making of wells **97**

5.2.1.3 Boring of wells and pouring of TMDC specimens on wells **97**

5.2.2 Preparation of WS_2 and MoS_2 nanostructures (Method 1) **98**

5.3 Results (Method 1) **99**

5.3.1 Characterization of synthesized nanostructures **99**

5.3.1.1 X-ray diffraction (XRD) spectroscopy **99**

5.3.1.2 UV-vis Spectroscopy **99**

5.3.1.3 Raman Spectroscopy **101**

5.3.1.4 Transmission Electron Microscopy (TEM) **101**

5.3.2 Screening for antimicrobial activity **103**

5.4 Experimental details and antimicrobial assessment (Method 2) **107**

5.4.1 Preparation of WS_2 and MoS_2 specimens **107**

5.4.2 Screening for antimicrobial activity **107**

5.5 Experimental details and antimicrobial assessment (Method 3) **107**

5.5.1 Preparation of WS_2 and MoS_2 specimens **107**

5.5.2 Screening for antimicrobial activity **107**

5.6 Experimental details and antimicrobial assessment (Method 4) **108**

5.6.1 Preparation of WS_2 and MoS_2 specimens **108**

5.6.2 Screening of antimicrobial activity **108**

5.7 Discussions **109**

5.7.1 Comparison of antimicrobial activities of WS_2 and MoS_2 specimens exfoliated through different methods **109**

5.7.2 Parameters responsible for antimicrobial activities of WS_2 and MoS_2 nanosheets **110**

5.7.3 Mechanism of antipathogenic activity **111**

5.8 Conclusion **113**

References **113**

Chapter VI: Conclusion and future directions

6.1 Conclusion **118**

6.2 Future directions **120**
