

<b>CONTENTS</b>	<b>Page No.</b>
<b>LIST OF TABLES</b>	i
<b>LIST OF FIGURES</b>	ii-xii
<b>LIST OF SYMBOLS AND ABBREVIATIONS</b>	xiii-xv
<b>CHAPTER I</b>	
<b>Introduction to the Research Problem</b>	
1.1 Wearable antenna-an introduction	3
1.2 Objectives of the research work	7
1.3 Thesis structure and outline	7
References	9
<b>CHAPTER II</b>	
<b>Development of Flexible and Robust Wearable Antenna</b>	
2.1 Introduction	17
2.2 Technique used for enhancing adhesion	18
2.3 Fabrication of the copper laminated silicone rubber-foam substrate	18
2.3.1 Adhesion of silicone rubber and foam	19
2.3.2 Adhesion of silicone foam substrate to metal layer	21
2.4 Material characterization of the fabricated silicone-foam substrate	23
2.4.1 Tensile and adhesive strength test	23
2.4.2 Thermo-gravimetric analysis (TGA)	25
2.4.3 Water absorbance test	25
2.5 Microwave characterization of silicone-foam substrate	26
2.6 Realization of wearable antenna on silicone-foam substrate	28
2.6.1 Antenna characterization techniques	30
2.6.2 Performance study of antenna in flat profile	31
2.6.3 Performance study of antenna for different bending profiles	33
2.7 Summary	38
References	39

<b>CONTENTS</b>	<b>Page No.</b>
 <b>CHAPTER III</b>	
<b>Mitigating the Detuning Effects of Bending</b>	
<b>3.1</b> Introduction	43
<b>3.2</b> Self-compensation technique	43
3.2.1 Characterization of the injected material	44
3.2.2 Substantiation of variation in dielectric constant of the injected substrate	45
3.2.3 Shape variation of grooves with bending	46
<b>3.3</b> Simulation study	48
3.3.1 Topology I-Bending perpendicular to the radiating edge (XZ-Bending)	48
3.3.2 Topology II-Bending parallel to the radiating edge (YZ-Bending)	50
3.3.3 Optimization of the groove count	51
<b>3.4</b> Experimental study	57
3.4.1 Realization of the groove substrate	57
3.4.2 Antenna performance studies	59
<b>3.5</b> Discussions	64
3.5.1 Analysis of antenna performance with bending	64
3.5.2 Investigation of performance of the self-compensating technique	65
<b>3.6</b> Summary	67
References	69
 <b>CHAPTER IV</b>	
<b>Effects of Human Body on Wearable Antenna</b>	
<b>4.1</b> Introduction	73
<b>4.2</b> Simulation study	74
4.2.1 Topology I - XZ bending	75

<b>CONTENTS</b>	<b>Page No.</b>
4.2.2 Topology II - YZ bending	77
<b>4.3</b> Experimental study	80
4.3.1 Development and dielectric characterization of realistic EM hand phantom	80
4.3.2 Evaluation of antenna performance over EM phantom	82
<b>4.4</b> Analysis and discussion	86
<b>4.5</b> Summary	91
References	92
 <b>CHAPTER V</b>	
<b>Reducing Back Radiation of Wrist-Worn Antenna</b>	
<b>5.1</b> Introduction	97
<b>5.2</b> Synthesis and characterization of Expanded Graphite (EG)	98
<b>5.3</b> Design and simulation of EG shield	100
5.3.1 Electric field analysis	106
5.3.2 Specific Absorption Rate (SAR) evaluation	108
<b>5.4</b> Prototyping and testing of EG shield WBAN antenna	110
5.4.1 Back radiation reduction with EG shield	115
<b>5.5</b> Summary	117
References	118
 <b>CHAPTER VI</b>	
<b>Achievements, Limitations and Future Directions</b>	119
References	129
 <b>Publications</b>
