

## **DECLARATION**

I hereby declare that this thesis entitled “**Metal Oxide-Based Nanostructures: Synthesis, Characterization and Their Applications**” being submitted to the Department of Chemical Sciences, Tezpur University, is a presentation of the original research work carried out by me. Any contribution (text, figure, result or design) of others, wherever involved, is appropriately referenced in order to give credit to the original author(s). All sources of assistance have been duly acknowledged. I affirm that neither this work as a whole nor a part of it has been submitted to any other university or institute for any other degree, diploma or award.

Date: 03/05/2023

## CERTIFICATE OF THE SUPERVISOR

This is to certify that the thesis entitled "**Metal Oxide-Based Nanostructures: Synthesis, Characterization and Their Applications**" submitted to the School of Sciences, Tezpur University in part fulfillment for the award of the degree of Doctor of Philosophy in Chemical Sciences is a record of research work carried out by **Ms. Sudakhina Saikia** under my supervision and guidance.

All help received by her from various sources have been duly acknowledged.

No part of this thesis has been submitted elsewhere for award of any other degree.

*Ramesh Ch. Deka*  
03/05/2023  
(Prof. Ramesh Chandra Deka)

Designation: Professor

School: School of Sciences,

Tezpur University

Department: Chemical Sciences

## **ACKNOWLEDGEMENT**

*At the very outset, I extend my utmost gratitude to my supervisor, Prof. Ramesh Ch. Deka, Department of Chemical Sciences, Tezpur University for providing the opportunity to carry out my research work under his supervision. I truly acknowledge him for his invaluable support and for providing the liberty to independently design ideas that boosted my endeavors in the scientific field during my entire research journey.*

*I express my heartfelt gratitude and regards to Dr. Pangkita Deka, Assistant Professor, Jorhat Engineering College for graciously providing me with guidance, valuable suggestions, and constant help throughout my research period.*

*I am sincerely grateful to the past and present Vice-Chancellors, Tezpur University for endowing me with the opportunity to be a part of this institution and carry out my research work in a cordial and scientific environment during the stipulated period.*

*I express my profound gratitude to the past and present Heads, Department of Chemical Sciences, Tezpur University for their valuable help and support in various aspects from time to time. Also, I am immensely thankful to my Doctoral Committee members, Dr. Pankaj Bharali and Dr. Nayanmoni Gogoi, Assistant Professors, Department of Chemical Sciences, Tezpur University for their valuable suggestions and scientific discussions to complete this study.*

*My deepest regards to Prof. B. M. Choudary (former Director, IICT, Hyderabad), Dr. Thirumalaiswamy Raja (NCL, Pune), Dr. Pranjal Gogoi (NCL, Pune), Dr. Lakshi Saikia (NEIST, Jorhat), Aritra Rajak (IACS, Kolkata) and Rajib Sarkar (NEHU, Shillong) for their constant support and valuable scientific inputs.*

*I thank all the faculty members and staff of the Department of Chemical Sciences, Tezpur University for their cooperation and help in various ways during my research period.*

*I gratefully acknowledge the Department of Science and Technology (DST), Government of India for providing DST-INSPIRE Fellowship and Research and Innovation Grant, Tezpur University for research support.*

*I profoundly thank the reviewers of my manuscripts for their valuable comments and suggestions which greatly helped me to improve my research work.*

*I convey my heartfelt gratitude and respect to all my teachers from elementary school to post-graduate level for their teachings which in one way or other contributed to shaping my career to this point.*

*I offer my sincere thanks to my past and present lab mates from both labs, i.e., Catalysis & Molecular Modelling (CMM) lab and Laboratory of Nanocatalysis for Energy and Environment (NEELab) for their help, goodwill and cooperation with me throughout this research journey. My gratitude also goes to the other research scholars of the Department of Chemical Sciences, Tezpur University for their help and encouraging words.*

*I convey my special thanks to Dr. Rituraj Das, Debabrat Pathak, Anurag Dutta, Dr. Mostofa Aatur Rohman, Dr. John Elisa Kumar, Dr. Kaushik Talukdar and Zumchilo E. Lotha for lending me immense help and support during this research journey.*

*I especially thank Prof. Ghanashyam Bez (NEHU, Shillong), Dr. Hiranya Saikia (Diphu Govt. College), Prof. Debarshi Prasad Nath (Tezpur University) and Dr. Juri Dutta (Tezpur University) for their valuable suggestions while choosing my research career and for standing beside me like my guardians.*

*My deepest gratitude goes to my parents, brothers, sister-in-law and other family members for their countless sacrifices, moral support and encouragement in overcoming every hurdle that came across my path.*

*Last but not the least, I am grateful to everyone who has contributed to the successful realization of my journey, as well as express my apology for not being able to mention personally one by one.*

**Sudakhina Saikia**

**LIST OF FIGURES**

<b>Chapter</b>	<b>Figure</b>	<b>Title</b>	<b>Page No.</b>
1	1.1	Timeline of breakthrough developments in the field of nanotechnology	1-2
	1.2	Classification of nanomaterials based on dimensionality	1-4
	1.3	Unit cell of ZnO	1-6
	1.4	Unit cell of SnO <sub>2</sub>	1-6
	1.5	Bar plot of number of publications on “Applications of metal oxide nanostructures”	1-11
	1.6	Applications of metal oxide-based nanostructures in various fields	1-11
	1.7	Methods for removal of organic dyes	1-16
	1.8	Removal efficiency (%) of dyes on GO-MnO <sub>2</sub> nanocomposite	1-18
	1.9	Photocatalytic degradation of methylene blue over ZnO, Gd/ZnO, N/ZnO and Gd/N ZnO	1-20
	1.10	Photocatalytic degradation of methylene blue over ZnO/rGO nanocomposites with varying GO concentrations	1-21
3	3A.1	XRD patterns (a), FTIR spectra (b) and TGA curves (c) of the synthesized ZnO precursors	3-3
	3A.2	XRD patterns (a), FTIR spectra (b) and Raman spectra (c) of the synthesized ZnO samples	3-5
	3A.3	SEM micrographs of ZnO precursors (a-c) and ZnO samples (d-f)	3-6
	3A.4	FESEM images of ZO-5 (a-c), ZO-10 (d-f) and ZO-15 (g-i) at different resolutions	3-7
	3A.5	TEM image (a), particle size distribution (b), HRTEM image (c), fast Fourier transform (FFT) image (d),	3-8

---

	inverse FFT (IFFT) image (e) and the live profile of IFFT (f) of the ZO-10 sample	
3A.6	XPS survey spectra (a), Zn 2p spectra (b) and O 1s spectra (c) of ZnO nanostructures	3-9
3A.7	N <sub>2</sub> adsorption-desorption isotherms and pore size distribution (inset) of ZO-5 (a), ZO-10 (b), ZO-15 (c) and py-FTIR spectra of the ZnO nanostructures (d)	3-10
3A.8	Effect of ZnO HNs on the yield of 4-methoxybenzophenone with reaction conditions: anisole (1 mmol), benzoyl chloride (1 mmol), solvent (2.5 mL) and catalyst (20 mol%)	3-14
3A.9	Recyclability test (a), Hot filtration test (b) of ZO-15 and FESEM image of recovered ZO-15 nanocatalyst after third cycle (c)	3-16
3B.1	FTIR spectrum (a), XRD pattern (b), SEM image (c) and FESEM image (d) of as-synthesized SnO <sub>2</sub> nanoparticles	3-19
3B.2	TEM images at different resolution (a, b), particle size distribution (c), HRTEM image (d), SAED pattern (e) and EDS (f) of the synthesized SnO <sub>2</sub> NPs	3-20
3B.3	XPS survey (a); Sn 3d (b); O 1s (c) and BET isotherm (d) of the as-synthesized SnO <sub>2</sub> sample; inset (d): pore size distribution curve of the respective sample	3-21
3B.4	Effect of temperature on the yield of product of the reaction. Reaction conditions: anisole (1 mmol), benzoyl chloride (1 mmol) and catalyst (5 mol%)	3-22
3B.5	Effect of benzoyl chloride to anisole mole ratio on the yield of product of the reaction (a); Recyclability test (b); SEM image (c) and XRD pattern (d) of the SnO <sub>2</sub> nanoparticles after fifth run, respectively of Friedel-Crafts benzylation of anisole. Reaction conditions: Catalyst (5 mol%) and temperature 50°C	3-24

---

3C.1	Results of the Rietveld refinement of the XRD pattern (a), corresponding unit cell (b) and crystallographic planes (c–f) of the scrutinyite-SnO <sub>2</sub>	3-27
3C.2	FESEM (a,b) and low magnified TEM (c,d) images of synthesized scrutinyite-SnO <sub>2</sub> in different resolutions	3-28
3C.3	Morphological and topological characterizations for scrutinyite-SnO <sub>2</sub> nanosheets assembly. Low-magnification TEM image (a) representing nanosheets, HRTEM image (b) of nanosheets assembly on the edge region (inset shows high magnified image of the yellow square box portion), Low-magnification TEM image (c) of a portion of nanosheet displaying the aggregation and attachment of tiny particles (slightly visible on the top flat surface of the sheet) (inset shows the corresponding particles size distribution), HRTEM image (d) of a nanosheet having two different zonal area (yellow and red color square box corresponding to $[01\bar{1}]$ and $[\bar{1}1\bar{1}]$ zone axis, respectively), high magnified HRTEM image of yellow color square box corresponding to $[01\bar{1}]$ (e) and red color square box corresponding to $[\bar{1}1\bar{1}]$ (f) zone axis, HRTEM image (g) of a different portion of the nanosheet displaying $[\bar{1}1\bar{1}]$ zone axis, SAED analysis (h) of the nanosheet, AFM image (i) of the SnO <sub>2</sub> nanosheet after strong ultrasonic treatment, corresponding height profiles (j) from AFM analysis of the SnO <sub>2</sub> nanosheet	3-30
3C.4	XPS spectrum of Sn 3d (a) and O 1s (b), BET isotherm (c) and pore size distribution (d) of the scrutinyite-SnO <sub>2</sub> NS assembly	3-32
3C.5	Py-FTIR spectra of synthesized SnO <sub>2</sub> nanosheets assembly at different temperatures	3-33

---

	3C.6	Recyclability test (a) and hot filtration test for leaching (b) of the SnO <sub>2</sub> nanocatalyst	3-39
	3C.7	Optimization of reaction conditions: temperature (a), microwave time (b), microwave power (c), and amount of catalyst (d). Reaction conditions: anisole (4 mmol) and benzoyl chloride (2 mmol)	3-42
4	4.1	FTIR (a) and XRD (b) patterns of synthesized samples: modified SBA-15, ZS, and TS	4-2
	4.2	TEM and HRTEM images of ZS (a, b) and TS (c, d); insets in c and d show SAED pattern of the corresponding samples	4-3
	4.3	EDX pattern (a), electron image (b), and EDS mapping of Si (c), O (d) & Zn (e) of ZS sample	4-4
	4.4	EDX pattern (a), electron image (b), and EDS mapping of Si (c), O (d) & Zn (e) of TS sample	4-5
	4.5	EDX pattern (a), electron image (b), and EDS mapping of Si (c), O (d) and Zn (e) of ZS sample	4-6
	4.6	EDX pattern (a), electron image (b), and EDS mapping of Si (c), O (d) & Zn (e) of TS sample	4-7
	4.7	N <sub>2</sub> adsorption-desorption isotherms of modified SBA-15 (a), ZS (b), and TS (c); insets (a–c): pore size distribution curve of the respective samples	4-8
	4.8	Recyclability test (a), XRD patterns of fresh and reused TS catalyst (b)	4-12
5	5.1	Molecular structures of (a) Congo red and (b) Rhodamine B	5-1
	5.2	Effect of contact time on adsorption capacity at pH 3.0 & 7.0 at 497 & 554 nm onto SnO <sub>2</sub> nanostructures for CR and RhB, respectively. Conditions: amount of mixed dye solution = 20 mL, concentration of dye solution = 3 mgL <sup>-1</sup> and amount of catalyst = 3 mg	5-3
	5.3	Pseudo-first order and pseudo-second order kinetics model for adsorption of CR-RhB mixed dye solution	5-4

---

	onto SnO <sub>2</sub> NS (a, b) and SnO <sub>2</sub> NP (c, d), respectively. Conditions: amount of mixed dye solution = 20 mL, concentration of dye solution = 3 mgL <sup>-1</sup> and amount of catalyst = 3 mg	
5.4	Langmuir and Freundlich adsorption isotherm model for adsorption of CR-RhB mixed dye solution onto SnO <sub>2</sub> NS at pH 3.0 (a, b) and 7.0 (c, d), respectively. Conditions: amount of mixed dye solution = 20 mL and amount of catalyst = 3 mg	5-6
5.5	Langmuir and Freundlich adsorption isotherm model for adsorption of CR-RhB mixed dye solution onto SnO <sub>2</sub> NP at pH 3.0 (a, b) and 7.0 (c, d), respectively. Conditions: amount of mixed dye solution = 20 mL and amount of catalyst = 3 mg	5-7
5.6	Effect of pH on adsorption of CR-RhB mixed dye solution at 497 and 554 nm onto SnO <sub>2</sub> nanostructures. Conditions: amount of mixed dye solution = 20 mL, concentration of dye solution = 3 mgL <sup>-1</sup> and amount of catalyst = 3 mg	5-8
5.7	Removal efficiencies of CR and RhB at pH 3.0 & 7.0 onto SnO <sub>2</sub> NS in different cycles. Conditions: amount of mixed dye solution = 20 mL, concentration of dye solution = 3 mgL <sup>-1</sup> and amount of catalyst = 3 mg	5-9
6	6.1 XRD pattern of synthesized samples (a), magnified view of (101) diffraction peaks of ZnO, ZnO/rGO and Cu-doped ZnO/rGO (b) and Raman spectra of GO and Cu-doped ZnO/rGO	6-3
	6.2 TEM micrographs at different resolution (a, b) and HR-TEM micrograph (c) of as-synthesized Cu-doped ZnO/rGO sample	6-4
	6.3 XPS survey (a), Zn 2p (b), O 1s (c), C 1s (d) and Cu 2p (e) spectra of Cu-doped ZnO/rGO	6-5

6.4	UV-vis diffuse reflectance spectra (a) and corresponding band gap energy (b) of ZnO, rGO and Cu-doped ZnO/rGO; BET isotherm of the synthesized Cu-doped ZnO/rGO sample (c); inset c: pore size distribution curve of the sample	6-6
6.5	UV-visible spectra for photocatalytic degradation of MB over Cu-doped ZnO/rGO under UV light (a) and sunlight (b); Photolysis and photocatalysis of MB over the synthesized photocatalysts (c). Conditions: $C_0 = 5$ ppm, $V_{\text{solution}} = 20$ mL, catalyst amount = 3 mg, pH = 7	6-8
6.6	Effect of various parameters on the % degradation of MB dye: Catalyst dosage (a), initial dye concentration (b) and pH (c). Conditions: $C_0 = 5$ ppm, $V_{\text{solution}} = 20$ mL, catalyst dosage = 5 mg, and pH = 7	6-10
6.7	Kinetic plot of $\ln (C_0/C)$ as a function of time for photocatalytic degradation of MB UV light	6-11
6.8	Recyclability test for photocatalytic degradation of MB over Cu-doped ZnO/rGO (a), XRD patterns of fresh and reused Cu-doped ZnO/rGO photocatalyst (b). Conditions: $C_0 = 5$ ppm, $V_{\text{solution}} = 20$ mL, catalyst amount = 5 mg, pH = 9	6-13

**LIST OF SCHEMES**

<b>Chapter</b>	<b>Scheme</b>	<b>Title</b>	<b>Page No.</b>
1	1.1	Various methods of synthesis of oxide nanostructures	1-8
	1.2	Friedel-Crafts acylation reaction	1-12
	1.3	General mechanism for Friedel-Crafts acylation reaction	1-13
	1.4	Adsorption-desorption mechanism between ZnO NPs and anionic dyes (MO and AM)	1-17
	1.5	Schematic diagram of the proposed mechanism for photocatalytic degradation of dyes	1-19
3	3A.1	Schematic illustration of the formation of ZnO hierarchical nanostructures	3-12
	3C.1	Schematic representation of formation and self-construction mechanism of 2D SnO <sub>2</sub> nanosheet ( $l \approx 140$ nm, $b \approx 85$ nm and $h \approx 1.32$ nm)	3-35
	3C.2	Schematic representation of acid catalyzed mechanism of Friedel-Crafts acylation over SnO <sub>2</sub> nanosheet ( $l \approx 140$ nm, $b \approx 85$ nm and $h \approx 1.32$ nm)	3-40

---

**LIST OF TABLES**

<b>Chapter</b>	<b>Table</b>	<b>Title</b>	<b>Page No.</b>
1	1.1	Adjustable properties of nanomaterials with examples	1-3
	1.2	Some key properties of ZnO and SnO <sub>2</sub>	1-7
	1.3	Effect of Si/Al ratio of HY zeolite to the reaction	1-14
2	2.1	List of chemicals	2-1
	2.2	Synthesis of zinc oxide hierarchical nanostructures by hydrothermal method	2-2
3	3A.1	Average particle diameters of the ZnO samples	3-9
	3A.2	Physical parameters of ZnO samples obtained from N <sub>2</sub> adsorption-desorption analysis	3-11
	3A.3	FC acylation of anisole with benzoyl chloride under various reaction conditions	3-13
	3A.4	Substrate scope for FC acylation reaction over ZO-15 catalyst	3-15
	3B.1	Screening of catalytic effect for Friedel-Crafts acylation reaction	3-23
	3C.1	Effect of solvent on the acylation of anisole with benzoyl chloride	3-36
	3C.2	Substrate scope for Friedel-Crafts acylation reaction over SnO <sub>2</sub> nanosheets	3-37
	3C.3	Comparative study for FC acylation of aromatic compounds with benzoyl chloride using different metal oxide catalysts	3-41
	3C.4	Study of substrate scope for FC acylation reaction under microwave irradiation	3-43
	4	4.1	Physical parameters of the synthesized samples obtained from N <sub>2</sub> sorption analysis

	5.2	Isotherm parameters for the adsorption of CR and RhB by SnO <sub>2</sub> nanocatalysts at pH 3.0 & 7.0, respectively	5-6
6	6.1	Comparison of photocatalytic activity of Cu-doped ZnO/rGO for MB degradation with reported photocatalysts	6-12

## LIST OF SYMBOLS AND ABBREVIATIONS

The symbols and abbreviations used in the thesis are listed below:

### Symbols

$\theta$	Theta
$^{\circ}$	Degree
$\alpha$	Alpha
$\mu$	Mu
$\text{\AA}$	Angstrom
$\Omega$	Ohm
$\nu$	Nu
$\beta$	Beta
$\lambda$	Lambda

### Abbreviations

AFM	Atomic force microscopy
aq	Aqueous
at.	Atomic
BE	Binding energy
BET	Brunauer-Emmett-Teller
BJH	Barrett-Joyner-Halenda
$^{\circ}\text{C}$	Degree celcius
cm	Centimetre
$\text{cm}^{-1}$	Per centimetre
$\text{cm}^3\text{g}^{-1}$	Centimetre cube per gram
CR	Congo red
CTAB	Cetyl trimethyl ammonium bromide
DRS	Diffuse reflectance spectroscopy
EDS/EDX	Energy dispersive X-ray spectroscopy
eV	Electron volt
FFT	Fast Fourier transform
FTIR	Fourier transform infrared

FWHM	Full width at half-maximum
g	Gram
$\text{gcm}^{-3}$	Gram per centimeter cube
$\text{gmol}^{-1}$	Gram per mole
$\text{gL}^{-1}$	Gram per litre
GO	Graphene oxide
h	Hour
HRTEM	High-resolution transmission electron microscope
IFFT	Inverse fast Fourier transform
IR	Infrared
JCPDS	Joint committee on powder diffraction standards
kV	Kilovolt
L	Litre
LH	Langmuir–Hinshelwood
$\lambda_{\text{max}}$	$\lambda_{\text{maximum}}$
m	Metre
M	Molar
MB	Methylene blue
mg	Milligram
$\text{m}^2\text{g}^{-1}$	Metre square per gram
$\text{mgL}^{-1}$	Milligram per litre
$\mu\text{m}$	Micrometre
MHz	Megahertz
min	Minute
mL	Millilitre
mmol	Millimole
$\text{mmolg}^{-1}$	Millimole per gram
mol	Mole
$\text{mol}^{-1}$	Per mole
$\text{molL}^{-1}$	Mole per litre
MW	Microwave
nm	Nanometre
No.	Number

---

NP	Nanoparticle
NS	Nanosheet
Pa	Pascal
ppm	Parts per million
