Abstract	vii
Acknowledgements	xv
List of Figures	xxi
List of Tables	xxix
Abbreviations	xxxii
1 INTRODUCTION	1
1.1 A brief history of neutrinos	2
1.2 An overview of neutrinos	3
1.2.1 Standard Model and The Neutrino	3
1.2.2 Neutrino Interactions	4
1.2.3 Neutrino Oscillations	5
1.2.4 Present status of the neutrino oscillation parameters	7
1.3 Sources of neutrinos	9
1.3.1 Natural sources	9
1.3.2 Artificial/Man-made sources	11
1.4 New Physics scenarios in the neutrino sector	13
1.4.1 Non Standard Interactions	13
1.4.2 Lorentz invariance violation	13
1.4.3 Neutrino decay	14
1.4.4 Sterile neutrinos	14
1.4.5 Neutrino decoherence	15
1.5 Scope of this thesis	15
2 Formalism and Statistical Methodology	17
2.1 Non Standard interactions of neutrinos	18
2.1.1 Vector Non Standard Interaction	19
2.1.2 Scalar Non Standard Interaction: the concept & formalism	19
2.2 Details of statistical χ^2 framework	24
2.3 Details of some upcoming neutrino experiments	25
2.3.1 Deep Underground Neutrino Experiment	25
2.3.2 Hyper Kamiokande	25
2.3.3 Tokai to Hyper-Kamiokande	26
2.3.4 Tokai to Hyper-Kamiokande to Korea	27

2.4	Chapter Summary	29
3	Impact on CP measurement sensitivity in light of scalar Non-Standard Interaction	31
3.1	Scalar NSI & δ_{CP} measurement	32
3.2	Simulation details	33
3.3	Effects on the oscillation probabilities	34
3.4	Impact on the detector sensitivity	38
3.4.1	Effects on the event rates	39
3.4.2	NSI parameter sensitivity	40
3.4.3	Effects on the CPV sensitivity	41
3.4.4	Effects on the CP-precision measurements	42
3.5	Chapter Summary	44
4	Probing Detector Sensitivity Through Synergy of DUNE, T2HK and T2HKK	45
4.1	Importance of combing data from various experiments	46
4.2	Effects on oscillation probabilities	48
4.3	Effects on CP-asymmetry	49
4.4	Effects on the event rates	52
4.5	Sensitivity to scalar NSI parameters	53
4.6	Impact on CP Violation sensitivity	57
4.7	Chapter Summary	61
5	Scalar NSI: A Unique Approach to Constrain Absolute Neutrino Masses through Neutrino Oscillations	63
5.1	Neutrino Mass Measurement	64
5.2	Effects on oscillation probabilities with varying ν -mass	66
5.3	Effect of SNSI with varying δ_{CP} and ν -mass	67
5.4	Effect of SNSI with varying ν -energy and ν -mass	69
5.5	Constraining the neutrino masses	71
5.6	Correlation in $(\eta_{\alpha\beta} - m)$ parameter space	73
5.7	Chapter summary	76
6	Exploration in Detector Simulation & Instrumentation	77
6.1	Overview of the work	78
6.2	HK Background simulation	78
6.2.1	Detector Simulation Procedure	80
6.2.2	Abundance Distribution	81
6.2.3	Energy Distribution	82
6.3	Probing neutrino mass ordering at HK	85
6.3.1	Details of Garching supernova model	86
6.3.2	Signatures of supernova neutrino emission	88
6.3.3	Flux calculation and neutrino oscillation	90
6.3.4	Impact on Neutrino mass ordering	92
6.4	Detector Instrumentation: Leak test of RPC	97
6.4.1	India-based Neutrino Observatory:	97
6.4.2	Resistive Plate Chamber	98
6.4.3	Leak test of RPC	100
6.4.4	The Experimental Setup	101
6.4.5	Volume correction due to bottom pop ups	102

6.4.6	Calculation of leak rate	103
6.5	Chapter Summary	108
7	Conclusion and Future Prospects	109
7.1	Conclusion	109
7.2	Future Prospects	112
A	Appendix	115
A.1	Calculation of neutrino oscillation probabilities	115
B	Appendix	119
B.1	Details of GLOBES simulation package	119
C	Appendix	123
C.1	Working principle of RPC	123
	Bibliography	125
