

“If we meticulously keep on working upon the known things, Allah will grant us knowledge of the unknown things.”

---Abba

To my Father, a gem of a person, a true philanthropist, and above all a very affectionate Father.

This thesis is dedicated to my father, who have encouraged me to do Ph.D. and always inspired me to be honest and not to take hardships seriously and keep going.

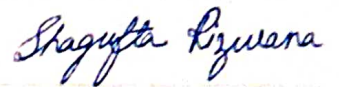

DECLARATION BY THE CANDIDATE

The candidate certifies that the thesis entitled "Near-Infrared based Solutions for Quality Assessment during Manufacturing and Storage of a Ready to Eat Rice" submitted to the School of Engineering, Tezpur University in partial fulfillment for the award of the degree of Doctor of Philosophy in the Department of Food Engineering and Technology is a record of research work carried out by me under the supervision of Prof. Manuj Kumar Hazarika.

All assistance received from various sources has been appropriately acknowledged. No part of this thesis has been submitted elsewhere for the award of any degree.

TEZPUR UNIVERSITY
Certificate of the Supervisor

This is to certify that the thesis entitled **Near Infrared based Solutions for Quality Assessment during Manufacturing and Storage of a Ready to Eat Rice** submitted to the School of Engineering, Tezpur University in part fulfillment for the award of the degree of Doctor of Philosophy in **Food Engineering and Technology** is a record of research work carried out by **Ms. Shagufta Rizwana** under my supervision and guidance.

All help received by her from various sources has been duly acknowledged.

No part of this thesis has been submitted elsewhere for award of any other degree.

Acknowledgments

I would like to acknowledge the support of all the people who have helped me reach this far in my Ph.D. journey. Firstly, my Ph.D. supervisor Prof. M.K. Hazarika for his guidance and encouragement throughout the execution of the project.

I thank the faculty members, my DRC committee, and the technical and office staff of the Department of Food Engineering and Technology, TU for their guidance and support. I would also like to express my gratitude towards my DC members for their valuable suggestions. I would also like to thank the All India Council for Technical Education for providing me with financial assistance with the National Doctoral Fellowship and the staff of the AICTE cell of Tezpur University, Mr. Debojit Sharma for carrying out our scholarship-related tasks and addressing our grievances.

Special thanks to Mr. Pankaj Hazarika and Mr. Anjan Nath for their kindness and generosity in providing me with samples every harvest. I am grateful for the help I received from other departments, Prof. Santanu Sarma, Head ECE, and his M. Tech Student Miranjyoti Buragohain for helping me with the electronics part; Jayanta Gogoi for his support in configuring the triad sensor program; Dr Nima D. Namsa, Assistant Prof., MBBT for allowing to use the lab and his Ph.D. Scholar Anutee Doley, for her complete help in the gel electrophoresis study.

Ph.D. is tough, but it is less tough if people around you are helpful. My friends and batchmates are always there to support and I owe them a big thank you! Beatrice, Ditimoni, Parismita, Payel, and Somya were always there for me, taking care of me in every possible way. My other batchmates and juniors too have always been kind and helpful towards me. Also, I thank my lab-mates who are supportive people and created a healthy work environment. Sourav Sir, Makeini Di, Sonam Di, Tridisha Baa, Ninja Baa, Swapnil Bhaiya, Arun Sir, Zola Baa, and Shikhapriyom, thank you all.

Lastly, but mostly my parents, my family, my loved ones, and friends who are constantly there to encourage me, support me, also hear me nag about every problem. Abba and Maa are the ones who encouraged me to pursue a Ph.D. and I am grateful to them for sacrificing a lot for our education. My sisters: the elder one for helping me out when I am broke, the younger one for the pressure to work hard for her, and my brother-in-law for taking care of my parents and my family. My entire family, my aunts, uncles, and cousins for their encouragement. My grandparents: Dadi, Nani, Dada, and Nana who aren't here in this world would be happier than everyone. Keerthana who is up above for her selfless help towards me. Sanju, Surabhi, Deepsikha, Kavi, Garima Baa, and all my wonderful bunch of girls who have motivated me to carry on despite their struggles, and Dipangkar for the constant support and encouragement in everything. Throughout my stay at this university, people were kind to me and helped me. Alhamdulillah, I can complete my Ph.D. work because of my father's blessings and his encouragement and support.

List of notations

ρ_b	Bulk density
ρ_t	True density
M	Moisture
k_1	Peleg's rate constant
k_2	Peleg's capacity constant
M_i	Initial moisture content
M_e	Equilibrium moisture content
MR	Moisture ratio
C_A	Volumetric concentration
C_{As}	Volumetric concentration in saturation
C_{A0}	Initial volumetric concentration
β	Rate constant estimated using experimental data
ρ_w	Volume of pure water
ρ_s	Volume of pure solid
d_p	Equivalent diameter
D_{ρ_A}	Diffusion coefficient
κ	Arbitrary constants used in Fick's diffusion
k_f	Arbitrary constants used in Fick's diffusion
k	First order rate constant
D_G	Degree of gelatinization

** A few arbitrary constants for the empirical drying model are kept as same as literature and those have been reported accordingly.

List of abbreviations

ANFIS	Adaptive Neuro Fuzzy Inference System
ANP	Aged Non-Parboiled
AP	Aged Parboiled
ANN	Artificial Neural Network
BP-ANN	Back propagation-ANN
BiPLS	Backward PLS
CFTRI	Central Food Technological Research Institute
CART	Classification and Regression Tree
CNN	Convolutional Neural Network
DSC	Differential Scanning Calorimetry
db	Dry basis
EMC	Equilibrium moisture content
EDM	Euclidean distance measure
FiPLS	Forward PLS
GI	Glycemic index
KNN	K-Nearest Neighbors
LS-SVM	Least-squares support vector machines
LDA	Linear Discriminant Analysis
LR	Logistic Regression
LSTM	Long short-term memory
ML	Machine Learning
m.c.	Moisture content
MLP-ANN	Multilayer Perceptron ANN
NB	Naïve Bayes
NIR	Near Infrared
NIRS	Near Infrared Spectroscopy
PLS	Partial Least Square
PLSR	PLS regression
PCA	Principal component analysis
PAT	Process Analytical Technology
RF	Random Forest
RVA	Rapid Visco Analysis
RNN	Recurrent Neural Network
SIMCA	Soft Independent Modeling Class Analogy
SAM	Spectral angle measure
SCM	Spectral correlation measure
SVM	Support Vector Machines
UANP	Unaged Non-Parboiled
UP	Unaged Parboiled
UVE-SPA-LS-SVM	Uninformative variable elimination (UVE) and successive projections algorithm (SPA) LA-SVM
wb	Wet basis
