

Declaration

I, **Honey Brahma**, hereby declare that the present thesis, entitled **Development of spectrum-based opto-electric-thermal model for reliable estimation of the energy yield of a photovoltaic module**, is the record of work done by me under the supervision of **Dr. Nabin Sarmah, Assistant Professor, Department of Energy, Tezpur University, Tezpur**. The contents of the thesis represent my original works that have not been previously submitted for any Degree/Diploma/Certificate in any other University or Institutions of Higher Education. This thesis is being submitted to Tezpur University for the Degree of Doctor of Philosophy in Energy.

Place: Tezpur University, Tezpur
Date: 07-06-2024

(Honey Brahma)

TEZPUR UNIVERSITY

(A Central University Established by an Act of Parliament)
Napaam, Tezpur-784028, Sonitpur, Assam, India

Certificate

This is to certify that the thesis entitled, *Development of spectrum-based opto-electric-thermal model for reliable estimation of the energy yield of a photovoltaic module*, submitted to the School of Engineering, Tezpur University in partial fulfillment for the award of the degree of Doctor of Philosophy in Energy is a record of research work carried out by Ms. Honey Brahma under my supervision and guidance.

All help received by her from various sources has been duly acknowledged.

No part of this thesis has been submitted elsewhere for the award of any other degree.

(Supervisor)

Dr. Nabin Sarmah
Assistant Professor, Department of Energy
School of Engineering, Tezpur University

TEZPUR UNIVERSITY

(A Central University Established by an Act of Parliament)
Napaam, Tezpur-784028, Sonitpur, Assam, India

Certificate of the External Examiner

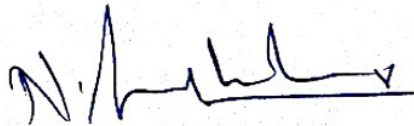

This is to certify that the thesis entitled “*Development of spectrum-based opto-electric-thermal model for reliable estimation of the energy yield of a photovoltaic module*” submitted by **Ms. Honey Brahma**, Department of Energy, School of Engineering, Tezpur University in partial fulfillment for the award of the degree of Doctor of Philosophy in Energy has been examined by us on 07-06-2024 and found to be satisfactory.

The committee recommends the award of the degree of Doctor of Philosophy.

07/06/2024
Supervisor

(Dr. Nabin Sarmah)

Date: 07-06-2024

External Examiner

(Dr. N. SENDHIL KUMAR)

Date: 07-06-24

Acknowledgements

I would like to express my gratitude to my PhD supervisor Dr. Nabin Sarmah for his guidance, support and ideas in completion of this thesis. I sincerely thank Dr. Greg P. Smestad, Principal at Sol Ideas Technology Development and Dr. Leonardo Micheli, Department of Astronautical, Electrical and Energy Engineering, Sapienza University of Rome for their encouragement, guidance and time to complete this reasearch work. I am grateful to the members of the doctoral committee of my research Prof. D. Deka, Prof. S. Mahapatra, and Dr. N. Gogoi for their valuable comments and feedbacks during the progress seminars.

I acknowledge Tezpur University, Ministry of Tribal Affairs and India-UK Center for Education and Research in Clean Energy Project for the financial assistance that has made it possible for me to carry out my reasearch work.

I extend my thanks to the faculty members Prof. D. C. Baruah, Prof. R. Kataki, Dr. P.K. Choudhury, Dr. B. K. Kakati, and Dr. V. Verma and the technical staff Mr. M. Borah, Mr. T. Borah and Mr. T. Lahon of the Department of Energy, Tezpur University for their cordial, approcable nature, and help in laboratory work. I would also like to thank the office staff Ms. P. Rajbonshi and Mr. D. Bhuyan.

I would also like to extend my gratitude to Dr. P.K. Gogoi, Department of Applied Sciences for his suggestions in manuscript preparatio and Mr. P. Mudoi, Department of MBBT, Tezpur University, for his help in providing facilities to carry out some of my research work in CIF laboratory. Also, I am thankful to Assistant Librarian, Mr. Jitu Mani Das for his contribution in collection research materials and checking the similarity index.

I would like to thank my fellow research scholars of the Solar Energy Laboratory Barnam Jyoti Saharia, Pankaj Borah, and Hirock Jyoti Das and former M.Tech students Palash, Avik, Rabina, Arunava, Anjan, Puja, Debasish, Jyotish, Labanya, Shraiya for their help, support, encouragement, and creating healthy work place

I am also thankful to research scholars Jitu, Rishang, Rahul, Achyutish for their help and support.

I feel fortunate and would like to express my gratitude to my dear friends and sisters Minakshi, Panchali, Trinakshee, Adity, Saswati, Rangila, Mandira, Gayatri Ba, Sunny for sharing memorable time with me in the journey as a research scholar. Their presence have supported, motivated, and encouraged me both in academics and life.

A very special gratitude to my family members Maa, Baba, Maharaj (Babu), and Rewrewa for their constant support, inspiration, patience and understanding that have greatly aided me in reaching this point. Also, I would like to thank Almighty God for showering blessings upon me.

Honey Brahma

UV	ultraviolet

List of symbols and subscripts

Symbols

Notation	Description
A	active area
a-Si	amorphous silicon
α	elevation angle
B	breadth
β	slope
c	speed of light
c_p	heat capacity at constant pressure
d	i^{th} day of the year
D	diffusivity of minority carrier
δ	declination angle
E	energy yield
E_G	bandgap
ε	emissivity
G	incident global spectral irradiance
G_o	total absorbed solar spectrum
G_r	reference solar irradiance
G_T	total irradiance
γ	surface azimuth angle
h	Planck's constant
h_{conv}	convective heat transfer coefficient
h_{rad}	radiative heat transfer coefficient
H_s	sunshine hour
I	current
I_{mp}	maximum current
I_o	diode saturation current
I_{ph}	photocurrent

I_{sc}	short circuit current
J_{sc}	short-circuit current density
k	conductive heat transfer coefficient
k_B	Boltzmann's constant
K	extinction coefficient
K_i	temperature coefficient for short-circuit current
K_v	temperature coefficient for open-circuit voltage
L	length
L_d	minority carrier diffusion length
L_p	path length
η	efficiency
$\eta_{normalized}$	normalized efficiency
$\eta_{PV(EQE,T)}$	efficiency of the PV module
$\eta_{PV(EQE,T)t=0}$	efficiency at the initial conditions
n	ideality factor
n_i	intrinsic carrier concentration
n_1	refractive indices of air
n_2	refractive indices of glass
N_D	doping concentration
N_s	number of cells connected in series
m	air mass
m-Si	monocrystalline silicon
λ	wavelength
P	power
$P_{incident}$	incident power
P_{max}	maximum power
PM	particulate matter
p-Si	polycrystalline silicon
ρ	density
q	electronic charge
q_c	heat flux by conduction
q_{cond}	conductive heat transfer
q_{conv}	convective heat transfer

q_r	heat flux by radiation
Q	additional heat source
Q_{ted}	thermoelastic damping
r_s	soiling ratio
Rain	rainfall
R^2	coefficient of determination
R_f	frequency of rainfall
RE	relative error
RH	relative humidity
R_{max}	maximum rainfall
R_s	series resistance
R_{sh}	shunt resistance
R_{shn}	intermediate values of shunt resistance
R_{sho}	initial shunt resistances
R_{sn}	intermediate values of series resistance
R_{so}	initial series resistances
Si	silicon
SW	South-west
t	time
T	temperature
T_{amb}	ambient temperature
T_c	cell temperature
T_d	dew point temperature
T_{ext}	external temperature
T_r	reference temperature
τ	transmittance
τ_{absor}	transmittances due to the absorption of glazing
τ_{loss}	soiling transmittance loss
τ_r	relative direct transmittance
τ_{reflec}	transmittances due to the reflection of radiation
u_{trans}	translational motion velocity vector
V	voltage
V_{mp}	maximum voltage

V_{oc}	open-circuit voltage
V_{th}	thermal voltage
W_s	wind speed
ω	hour angle
x	thickness
θ	zenith angle
θ_1	angles of incidence
θ_2	angles of refraction
φ	latitude
σ	Stefan Boltzmann constant

Subscripts

Notation	Description
amb	ambient
b	back
c	cell
clean	under clean condition
conv	convection
exp	experiment
ext	external
f	front
m	monocrystalline
max	maximum
p	polycrystalline
rad	radiative
r_s	soiling ratio
sim	simulation
soiled	under soiled condition
