

Contents

1	Introduction	1
1.1	Image super-resolution	1
1.2	Single Image Super-Resolution (SISR)	2
1.3	Remote Sensing (RS) SISR	3
1.3.1	Image Degradation Model	3
1.3.2	RS Data Process for SISR Approach	5
1.3.3	SISR approaches in RS	6
1.3.4	Challenges of SISR in RS	18
1.4	Motivation of the present work	20
1.5	Scope of the work	21
1.6	Contributions from the Thesis	22
1.7	Thesis outline	25
2	Review of Literature	28
2.1	Introduction	28
2.2	Classification of SR methods	29
2.2.1	Frequency domain	30
2.2.2	Spatial domain	31
2.3	Learning-based SISR methods	35
2.3.1	Sparse-representation-based SISR	36
2.3.2	Deep learning-based SISR	38
2.4	Benchmarking criteria of remote sensing SISR algorithms	43
2.5	Parallel computing for SR	45
2.6	Remote sensing datasets	48
2.6.1	Publicly available datasets	48
2.6.2	Self-procured real MS remote sensing images	49

2.7	Image quality evaluation metrics	49
2.7.1	Reference-based quantitative metrics	51
2.7.2	No-reference-based quantitative metrics	53
2.8	Summary and research gaps	54
3	Development of Remote Sensing Single Image Super-resolution using GPU-Accelerated Adaptive Dictionary Learning and Sparse Representations	56
3.1	Introduction	56
3.1.1	Main contributions of the chapter	58
3.2	Prior Art	59
3.2.1	Sparse representation model for super-resolution	59
3.2.2	Dictionary learning	61
3.3	Materials and Methods	61
3.3.1	CPU implementation of MS remote sensing image SR based on adaptive dictionary learning	62
3.3.2	CUDA-GPU implementation	68
3.4	Results and Discussion	71
3.4.1	Dataset	71
3.4.2	Experimental set-up	71
3.4.3	Performance evaluation	71
3.4.4	Application: Land cover classification	80
3.5	Conclusion	82
4	Development of Edge Preserving Remote Sensing Single Image Super-resolution based on Global Dictionary Learning and Sparse Representations	83
4.1	Introduction	83
4.1.1	Main contributions of the chapter	85
4.2	Prior Art	86
4.2.1	Scale-invariant feature transform (SIFT)	86

4.2.2	Non-local total variation (NLTV) regularization	87
4.3	Proposed method	88
4.3.1	Feature extraction	88
4.3.2	Feature-enhanced patch-based multiple dictionary learning . .	90
4.3.3	SR Reconstruction	92
4.3.4	Implementation using CUDA-GPU	96
4.4	Results and Discussion	98
4.4.1	Computing environment	98
4.4.2	Ablation Study	101
4.4.3	Performance evaluation	102
4.4.4	SR on real MS images	110
4.4.5	Convergence test and Complexity analysis	112
4.4.6	Parameters empirical study	113
4.4.7	Scalability Study	114
4.5	Conclusion	117
5	Development of Deep Learning Joint Single Image Super-resolution and Deblurring Network for Remote Sensing Images	118
5.1	Introduction	118
5.1.1	Main contributions of the chapter	120
5.2	Prior Art	121
5.2.1	Residual learning	121
5.2.2	Upsampling methods	122
5.3	Proposed method	124
5.3.1	SR feature extraction module	124
5.3.2	Deblurring module	131
5.3.3	SCSE-based gated fusion module	131
5.3.4	Upscaling and reconstruction module	132

5.3.5	Loss function	133
5.4	Results and Discussions	134
5.4.1	Dataset preparation	134
5.4.2	Degradation method	135
5.4.3	Experimental settings	135
5.4.4	Ablation studies	136
5.4.5	Comparison with the state-of-the-art	137
5.4.6	Results on real RS data	141
5.4.7	Comparison on model size	144
5.4.8	Application: Land cover classification	145
5.5	Conclusion	146
6	Conclusions and Future Scopes	148
6.1	Summary	148
6.2	Future research scopes	150
