Abstract	i-iii
Declaration by the Candidate	iv
Certificate of the Principal Supervisor	v
Acknowledgement	vi-vii
Table of Contents	viii-xii
List of Figures	xiii-xv
List of Tables	xvi-xvii
List of Keywords	xviii
List of Symbols and Abbreviations	xix-xxiii
Chapter 1: Introduction and Review of Literature	1-22
1.1 Venomous snakes and snakebite	1-3
1.2 <i>Bungarus fasciatus</i>	3-6
1.2.1 Distribution of <i>B. fasciatus</i>	4-5
1.2.2 Morphology of <i>B. fasciatus</i>	5
1.2.3 Habitat and Ecology of <i>B. fasciatus</i>	5-6
1.2.4 Food habits of <i>B. fasciatus</i>	6
1.3 <i>B. fasciatus</i> 's pathophysiological landscape	6-8
1.4 Antivenom therapy: Present scenario and limitations	8-12
1.5 Alternative approaches to antivenom therapy	13-15
1.6 <i>B. fasciatus</i> venom variation and antivenom cross-reactivity	15-19
1.6.1 <i>B. fasciatus</i> venom composition and intra-species venom variation	15-19
1.6.2 <i>B. fasciatus</i> venom variation and antivenom cross-reactivity	19-20
1.7 Need for the study	21
1.8 Research Hypothesis	21
1.9 Aim of the study	21
1.10 Objectives of the study	21
1.11 Experimental approach	22
Chapter 2: Analysis of crude <i>Bungarus fasciatus</i> venoms from different geographical locations of Eastern and North-East India	23-44

2.1	Introduction	23-24
2.2	Materials	25-31
2.2.1	Snake venoms	25
2.2.2	Chemicals and reagents	25
2.2.3	Columns	26
2.3	Methods	26-31
2.3.1	Protein estimation	26
2.3.2	Sodium dodecyl sulphate-Polyacrylamide gel electrophoresis (SDS-PAGE)	26
2.3.3	Reversed phase- High Performance Liquid Chromatography (RP-HPLC)	27
2.3.4	Phospholipase A ₂ activity	27-28
2.3.5	Proteolytic activity	28-29
2.3.6	Hemolytic activity	29-30
2.3.7	Coagulation activity	30-31
2.3.8	Statistical analysis	31
2.4	Results	31-40
2.4.1	Quantitative and qualitative analysis of crude venom profile	31-34
2.4.1.1	Protein estimation of crude venoms	31-32
2.4.1.2	Gel electrophoresis of crude <i>B. fasciatus</i> venoms	32-33
2.4.1.3	RP-HPLC profiling of crude <i>B. fasciatus</i> venoms	33-34
2.4.2	Comparative biochemical analysis of crude venoms	34-40
2.4.2.1	Phospholipase A ₂ activity of crude venoms	34-36
2.4.2.2	Proteolytic activity of crude venoms	36-37
2.4.2.3	Hemolytic activity of crude venoms	37-38
2.4.2.4	Coagulation activity of crude venoms	39-40
2.5	Discussion	40-44
2.6	Conclusion	44
Chapter 3: Cross-reactivity of Indian polyvalent antivenom against <i>Bungarus fasciatus</i> venoms from different geographical locations of Eastern and North-East India		45-61
3.1	Introduction	45-46
3.2	Materials	47-48

3.2.1	Snake venoms	47
3.2.2	Indian polyvalent antivenom	47
3.2.3	Chemicals and reagents	47-48
3.2.4	Chromatographic Columns	48
3.3	Methods	48-51
3.3.1	F(ab') ₂ content and SDS-PAGE analysis of Indian polyvalent antivenom	48-49
3.3.2	Dialysis of polyvalent antivenom	49
3.3.3	Western blot analysis	49-50
3.3.4	Second-generation antivenomics	50-51
3.4	Results	51-56
3.4.1	Comparative analysis of Indian polyvalent antivenom	52-53
3.4.2	Immunochemical analysis of antivenom using Western blotting	53-54
3.4.3	Immunodepletion analysis using Second-generation antivenomics	54-57
3.5	Discussion	57-61
3.6	Conclusion	61
Chapter 4: Isolation and identification of poorly-immunodepleted proteins of Bungarus fasciatus venom from North-East India using third-generation antivenomics		61-82
4.1	Introduction	62-65
4.2	Materials	64
4.2.1	Snake venoms	64
4.2.2	Indian polyvalent antivenom	64
4.2.3	Chemicals and reagents	64
4.2.4	Chromatographic Columns	65
4.3	Methods	65-69
4.3.1	3G antivenomics	65-67
4.3.2	Gel electrophoresis and Western Blotting	67
4.3.3	Identification of proteins by ESI-LC-MS/MS	68-69
4.4	Results	69-79

4.4.1	Maximum binding capability of antivenom targeting <i>B. fasciatus</i> venom from Aizawl (Mizoram)	69-71
4.4.2	Maximum binding capability of antivenom targeting <i>B. fasciatus</i> venom from Guwahati (Assam)	72-74
4.4.3	Estimation of antivenom vials required to immunocapture all venom proteins in <i>B. fasciatus</i> envenomated victim and its associated cost	74-75
4.4.4	SDS-PAGE and Western Blotting of poorly-immunodepleted peaks	75-76
4.4.5	Identification of proteins by Liquid chromatography-tandem mass spectrometry	76-79
4.5	Discussion	80-83
4.6	Conclusion	83
Chapter 5: Characterization of poorly-immunodepleted peaks and identified PLA₂ enzymes from <i>B. fasciatus</i> venom of Assam, India		84-108
5.1	Introduction	84-85
5.2	Methods	86-89
5.2.1	Characterization of poorly-immunodepleted PLA ₂ proteins	86
5.2.1.1	PLA ₂ activity	86
5.2.1.2	Anticoagulant activity	86
5.2.2	Neutralization of in vitro enzymatic activities by Indian polyvalent antivenom	86
5.2.3	Multiple sequence alignment	86-87
5.2.4	Phylogenetic tree analysis	87
5.2.5	Tertiary structure prediction using Homology modelling and its validation	87-88
5.2.6	B-cell epitope prediction of identified PLA ₂ enzymes	88
5.2.7	Surface cavity search	88
5.2.8	Statistical analysis	88
5.3	Results	89-102
5.3.1	Characterization of poorly-immunodepleted PLA ₂ proteins	89-91
5.3.1.1	PLA ₂ activity	89
5.3.1.2	Anticoagulant activity	89-90
5.3.2	Neutralization of in vitro enzymatic activities	90-91

5.3.3	Multiple sequence alignment	91-93
5.3.4	Phylogenetic tree analysis	93-94
5.3.5	Tertiary structure modelling and validation of identified PLA ₂ enzymes	94-96
5.3.6	B-cell epitope prediction of identified PLA ₂ enzymes	97-101
5.3.7	Surface cavity search in identified PLA ₂ enzymes	102-103
5.4	Discussion	103-108
5.5	Conclusion	108
Chapter 6: Critical Discussion and Future Prospects		109-115
6.1	Critical Discussion	109-112
6.1.1	Steps to consider before antivenom manufacturing	109-110
6.1.2	Region-specific antivenom	110
6.1.3	Alternate approaches currently explored	111
6.1.3.1	Single-chain variable fragments (scFvs)	111
6.1.3.2	Single-domain antibodies (sdAbs)	111
6.1.4	Next generation antivenom	111-113
6.1.4.1	Monoclonal antibodies	112
6.1.4.2	Human monoclonal antibodies	112-113
6.1.4.3	Protein based ADDomer nanoparticles (The ADDovenom project)	113-114
6.2	Future prospects of this study	114-115
