S.No.	Title	Page No.
I.	Abstract	i-ii
II.	Declaration	iii
III.	Certificate of the supervisor	iv
IV.	Acknowledgment	v-vi
V.	Contents	vii-xii
VI.	List of tables	xiii-xiv
VII.	List of figures	xv-xvi
1.	Introduction	1-12
1.1	Research gap	6
1.2	Objectives	6
1.3	Justification	7
1.4	Arrangement of thesis	7
1.5	Summary to chapter-1	8
1.6	References to chapter-1	8-12
2.	Review of literature	13-31
2.1	Chokuwa paddy in Assam as a traditionally ready-to-eat rice	13
2.2	Parboiling of chokuwa paddy	14
2.3	ICPD assisted parboiling of paddy	16
2.4	Gelatinization kinetics of chokuwa paddy	17
2.5	Drying and rehydration study	19
2.6	Modeling of the parboiling process in context to soaking, gelatinization, and drying	22
2.7	Modeling of rehydration kinetics of parboiled rice	23
2.8	Bran oil processing and its quality	23
2.9	Summary of chapter-2	25
2.10	References to chapter-2	26-31
3.	Material and methods	32-54
3.1	Materials and equipments used	32
3.1.1	Raw materials	32
3.1.2	Chemicals and reagents	32

3.1.3	Measuring instruments and processing equipment	33
3.1.4	Software and computational tools	34
3.2	Methods	35
3.2.1	ICPD setup and experimental process	35
3.2.2	Sample preparation	38
3.2.3	Statistical analysis	40
3.3.	Effect of Instant control pressure drop treatment on various stages of the parboiling process	40
3.3.1	Study of the behavior of paddy during soaking	40
3.3.1.1	Soaking of paddy at different temperatures	40
3.3.1.2	Study of kinetic behavior on hydration of paddy	40
3.3.2	Gelatinization behavior of rice after treatment with instant decompression in ICPD system	41
3.3.2.1	Degree of gelatinization	41
3.3.2.2.	Kinetics of gelatinization	41
3.3.3	Effects on drying behavior	42
3.3.3.1.	Drying behavior of paddy	42
3.3.3.2	Drying kinetics of paddy	42
3.3.3.3	Moisture diffusivity during drying of paddy after ICPD treatment.	43
3.3.4	Rehydration behavior of ICPD- treated rice with instant decompression	43
3.3.4.1	Rehydration of rice	43
3.3.4.2	Study of rehydration kinetics	44
3.3.5	Effect of high-pressure treatments on cooking time, rehydration ratio of rice	44
3.3.5.1	Rehydration ratio	44
3.3.5.2	Cooking time	44
3.3.5.3	Degree of polishing (DOP) (%)	45
3.3.5.4	Response surface Analysis of high-pressure treatment with and without instant decompression in ICPD system	45
3.3.6	Effect of high-pressure treatment on morphological structure, and physical dimensions of treated rice	45

3.3.6.1	Physical dimensions of rice	45
3.3.6.2	Micro-structural properties	46
3.3.6.3	Fourier transformation infrared (FTIR) of rice flour	46
3.3.6.4	X-ray diffraction (XRD) of rice flour	46
3.4	Effect of high-pressure treatment on quality of bran and bran oil	46
3.4.1	Extractability of bran oil	46
3.4.2	Acid value	47
3.4.3	γ -oryzanol content in rice bran oil	47
3.4.4	α -tocopherol content	47
3.4.5	Effect of high-pressure treatment on lipase activity in bran	48
3.4.6	Kinetics of lipase activity	48
3.4.7	Total phenolic content	49
3.4.8	Hydrogen peroxide scavenging activity	49
3.5	Development of a paddy parboiling process for the co- production of improved quality parboiled rice and stabilized rice bran	49
3.5.1	Experimental design for paddy parboiling process	49
3.5.1.1	Head rice yield (HRY)	50
3.5.2	Pasting properties of rice flour	50
3.5.3	Fourier Transformation Infra-Red (FTIR) of rice bran	50
3.5.4	X-ray diffraction (XRD)	50
3.5.5	Microstructure of rice bran	51
3.5.6	Color of rice and rice bran	51
3.5.7	Extraction and purification of polyphenols	51
3.5.7.1	Extraction of polyphenols	51
3.5.7.2	Quantification polyphenols	52
3.5.8	Free fatty acid profiling of bran	52
3.6	References to chapter-III	52-54
4.	Results and discussion	55-120
4.1	Study of the behavior of threshed paddy during soaking	55
4.1.1	Effect of temperature on absorption of water	55
4.1.1.1	Kinetic study of hydration.	56
4.1.2	Gelatinization behavior of chokuwa paddy on the application of	59

	instant decompression	
4.1.2.1	Gelatinization of starch with steaming time	59
4.1.2.2	Study of kinetics behavior of starch gelatinization in paddy during steaming in ICPD system	60
4.1.3	Drying behavior of chokuwa paddy on application of instant decompression	62
4.1.3.1	Drying behavior of chokuwa paddy	62
4.1.3.2	Drying kinetics of paddy	65
4.1.4	Study of rehydration properties of treated and non-treated white chokuwa rice	68
4.1.4.1	Kinetic study of rehydration	69
4.1.5	Degree of polishing (DOP)	71
4.1.6	Responses surface analysis of paddy treated with high pressure steam	72
4.1.6.1	Properties of high-pressure treated rice	74
4.1.7	Response surface analysis of paddy treated at high-pressure with decompression	75
4.1.8	Properties of high-pressure treated rice with instant decompression	77
4.1.9	Effect of decompression pressure on gelatinization of treated rice	78
4.1.10	Effect of incorporation of instant decompression to high pressure treatment on physical properties and microstructures	79
4.1.10.1	Dimensions of uncooked and cooked rice	79
4.1.10.2	Microstructure of rice	80
4.2	Evaluation of the rice bran stabilization effect from high-pressure parboiling administered by ICPD-treatment	82
4.2.1	Characteristics of untreated rice bran (CB _{Raw})	82
4.2.2	Effects of high- pressure treatments with instant decompression on rice bran quality	85
4.2.2.1	Effects of high- pressure treatments with instant decompression on antioxidants (γ - oryzanol and α -tocopherol)	85
4.2.2.2.	Effects of high- pressure treatments with instant decompression	86

	on acid value	
4.2.2.3	Effects of high- pressure treatments with instant decompression on color parameters	87
4.2.3	Effects of high- pressure treatments with instant decompression on microstructure of bran	88
4.2.4	Effects of high- pressure treatments with instant decompression on chemical bonds and functional groups using Fourier transformation infra-red (FTIR) analysis	89
4.2.5	X-Ray Diffraction (XRD) analysis	90
4.2.6	Effects of incorporation of instant decompression to high pressure treatments on lipase activity	91
4.2.7	Lipase activity of stored high pressure treated bran with instant decompression at room temperature in air tight container	93
4.3	Development of a paddy parboiling process for the co-production of improved quality parboiled rice and stabilized rice bran	95
4.3.1.	Optimization of ICPD treatment process parameters	95
4.3.2	Comparative study of paddy treated with instant control pressure drop system with and without application of instant decompression	100
4.3.2.1	Density, porosity, and dimensional analysis	100
4.3.2.2.	Color parameters	101
4.3.2.3.	Effect of application of instant decompression on head rice yield, cooking time and rehydration ratio	102
4.3.2.4.	Effect of instant decompression on functional groups and chemical bonds in rice flour	103
4.3.2.5.	Pasting properties	104
4.3.3	Comparative study of bran treated with Instant control pressure drop system (CB _{ICPD}) with and without application of instant decompression (CBN _{ICPD})	105
4.3.3.1.	Evaluation of hydrogen peroxide scavenging activity, radical scavenging activity (DPPH), total phenolic content (TPC)	106
4.3.3.2.	Evaluation of α -tocopherol content in optimized rice bran	107

	($\mu\text{g}/\text{kg}$)	
4.3.3.3.	Effect of different treatments on caffeic, p-hydroxybenzoic, vanillic, and syringic acid	107
4.3.3.4.	Accelerated storage study of bran at 4 °C, and 37 °C	108
4.3.3.5.	Fourier Transformation Infra-Red (FTIR) analysis of raw and bran separated from paddy treated with and without instant decompression	108
4.3.3.6.	Fatty acid profiling of bran	109
4.3.4.	Summary of chapter- IV	110
4.4	References of chapter-IV	112-120
5.	Summary and Conclusions	121-124
5.1.	Summary of the research	121
5.2.	Conclusions	123
5.3.	Scope for future works	123

Appendices
