

## Table of contents

Abstract	(i)
Declaration	(vi)
Certificate of the Principal Supervisor	(vii)
Certificate of the External Examiner and ODEC	(viii)
Acknowledgements	(ix)
Table of Contents	(xi)
List of Figures	(xix)
List of Tables	(xxx)
List of Abbreviations	(xxxv)
List of Publications	(xxxviii)
Conference Proceedings	(xxxx)

<i>Chapter No.</i>	<i>Contents of the Chapter</i>	<i>Page No.</i>
<b>Chapter 1:</b>	<b>Motivation and outline of the Thesis</b>	<b>1-5</b>
1.1	Motivation of the present work	2
1.2	Outline of the thesis	4
<b>Chapter 2:</b>	<b>Introduction and review of literature</b>	<b>6-30</b>
2.1	Intrinsically disordered proteins	7
2.2	Folding and misfolding of proteins	8
2.3	Protein Aggregation mechanisms	10
2.4	Parkinson's Disease- Neurodegenerative disorder	12
2.4.1	Epidemiology of Parkinson's Disease	13
2.4.2	Diagnosis	13
2.4.3	Pathology	14
2.4.4	Symptoms of Parkinson's Disease	16
2.4.5	Causes of Parkinson's Disease	17
2.5	$\alpha$ -Synuclein- a natively unfolded protein	18
2.5.1	Structural details of $\alpha$ -Synuclein	20
2.5.2	Structure of membrane-bound $\alpha$ -Synuclein	23
2.5.3	Influence of Mutants on Membrane Interaction	23
2.5.4	$\alpha$ -Synuclein induced Membrane perturbation	25
2.5.5	Membrane binding induced broken and extended helix	26
2.6	Post translational modifications of Membrane bound $\alpha$ - Synuclein	26
2.6.1	Phosphorylation of $\alpha$ -Synuclein	26
2.6.2	C-terminal truncation of $\alpha$ - Synuclein	27
2.7	Therapeutic Strategies targeting $\alpha$ -Synuclein-lipid membrane interactions	28
2.8	Scope of Thesis	28
2.9	Main objectives of Thesis	30
<b>Chapter 3:</b>	<b>Materials and Methods</b>	<b>31-68</b>

## Table of contents

3.1	Tools and Techniques	32
3.1.1	Molecular Dynamics (MD) simulation	32
3.1.1.1	History of Simulation	33
3.1.1.2	Theory of MD Simulation	33
3.1.1.3	Force field (FF)	35
3.1.1.4	Long range interaction: Ewald sum	37
3.1.1.5	SHAKE algorithm: Dealing with molecules	39
3.1.1.6	Periodic Boundary conditions	40
3.1.1.7	Temperature and Pressure computation control	41
3.1.1.8	Water molecule models	42
3.1.1.9	Molecular Dynamics steps	44
3.1.2	CHARMM-GUI – construction of membrane–protein model	50
3.1.3	Molecular Docking	53
3.1.3.1	CB-Dock2 tool Prediction	54
3.1.4	Prediction of protein-protein / protein-ligand interaction using <i>in-silico</i> tools	55
3.1.4.1	PDBsum server	56
3.1.4.2	LigPlot server	57
3.1.5	YASARA tool	58
3.1.6	ESBRI server	59
3.1.7	Binding Free Energy (BFE) Analysis	60
3.1.8	Prediction of binding pocket analysis using CASTp Server	61
3.1.9	Prediction of effect of mutants on the stability of the protein	62
3.1.10	Helanal Server	63
3.1.11	SOPMA server	63
3.1.12	Density Functional Theory (DFT)	64
3.1.13	Analysis of MD trajectory	64
3.1.14	3-D structure visualization tool	67
<b>Chapter 4:</b>	<b>Computational study of the structural and dynamic insights of membrane bound <math>\alpha</math>-Synuclein at atomistic level resolution</b>	<b>69-87</b>
4.1	Abstract	70
4.2	Introduction	70
4.3	Materials and Methods	72
4.3.1	Preparation of membrane bound $\alpha$ -Synuclein complex structure	72
4.3.2	Molecular Dynamics Simulation protocol	72
4.3.3	Analysis of Molecular Dynamics Trajectories	73
4.4	Results and Discussions	74
4.4.1	Area per Lipid analysis	74
4.4.2	Membrane Thickness Analysis	74
4.4.3	Electron Density Profile Analysis	75
4.4.4	Root mean square deviation Analysis	76
4.4.5	Principle Component Analysis followed by Free Energy landscape analysis	77

## Table of contents

4.4.6	Root mean square fluctuation Analysis	78
4.4.7	Secondary structural analysis	79
4.4.8	Conformational snapshots of $\alpha$ -Synuclein in membrane bound state	80
4.4.9	Intermolecular Hydrogen bond analysis	81
4.4.10	Distance Analysis	85
4.5	Conclusion	86
<b>Chapter 5a: Effect of ethanol as a crowding medium on the conformational dynamics of <math>\alpha</math>-Synuclein</b>		
5.a.1	Abstract	89
5.a.2	Introduction	89
5.a.3	Materials and Methods	90
5.a.3.1	Preparation of the initial structure	90
5.a.3.2	Preparation of the crowding agent	90
5.a.3.3	Setup for MD simulation	90
5.a.3.4	Analysis of MD trajectories	90
5.a.4	Results and Discussions	91
5.a.4.1	Conformational dynamics of $\alpha$ -Synuclein in different concentrations of crowding agent	91
5.a.4.2	Secondary structural Analysis of $\alpha$ -Synuclein in different concentrations of crowding agent	93
5.a.4.3	Conformers of $\alpha$ -Synuclein at different concentrations of ethanol	95
5.a.4.4	Analysis of diffusion co-efficient	95
5.a.5	Conclusion	96
<b>Chapter 5b: Screening of druggable conformers of <math>\alpha</math>-Synuclein using Molecular Dynamics Simulation</b>		
5.b.1	Abstract	98
5.b.2	Introduction	98
5.b.3	Materials and Methods	99
5.b.3.1	MD simulation setup	99
5.b.3.2	Clustering of conformers based on Radius of gyration	101
5.b.3.3	Prediction of binding pockets	102
5.b.4	Results and Discussions	102
5.b.4.1	Radius of gyration analysis	102
5.b.4.2	Solvent accessible surface area analysis	103
5.b.4.3	Binding pocket analysis	104
5.b.4.4	Secondary structural analysis	106
5.b.5	Conclusion	115
<b>Chapter 6: Conformational Dynamics of A30G <math>\alpha</math>-Synuclein that causes familial Parkinson disease</b>		
6.1	Abstract	117
6.2	Introduction	117

## *Table of contents*

6.3	Materials and Methods	118
6.3.1	Construction of A30G $\alpha$ -Synuclein	118
6.3.2	Simulation of A30G $\alpha$ -Synuclein as a free monomer in solution	118
6.3.3	Prediction of Stability and functioning of $\alpha$ -Synuclein protein upon A30G mutation	120
6.3.4	Construction of Membrane bound $\alpha$ -Synuclein for Molecular Dynamics simulation	120
6.3.5	Analysis of MD simulation trajectories	121
6.4	Results and Discussions	122
6.4.1	Area per lipid analysis of membrane bound A30G $\alpha$ -Synuclein	122
6.4.2	Electron Density Profile of lipid membrane bound A30G $\alpha$ -Synuclein	123
6.4.3	Snapshots of A30G $\alpha$ -Synuclein in free monomer form and when bound to membrane bilayer	124
6.4.4	RMSD Analysis	128
6.4.5	Radius of gyration analysis	129
6.4.6	RMSF Analysis	129
6.4.7	Secondary Structural Analysis	130
6.4.8	Intermolecular Hydrogen bond Analysis	133
6.4.9	Intramolecular Hydrogen bond Analysis	138
6.4.10	Analysis of distance between N-terminal and C-terminal regions	139
6.4.11	Helical bend Analysis	140
6.4.12	Torsion angle Analysis	141
6.4.13	Prediction of $\alpha$ -Synuclein protein stability changes and functioning upon mutation	143
6.5	Conclusion	144
<b>Chapter 7: Study of effect of <math>\alpha</math>-Synuclein mutants on its interaction with the lipid membrane 146-177</b>		
7.1	Abstract	147
7.2	Introduction	147
7.3	Materials and Methods	149
7.3.1	Construction of $\alpha$ -Synuclein mutants	149
7.3.2	Preparation of $\alpha$ -Synuclein mutants and lipid membrane complex	149
7.3.3	MD simulation setup	149
7.3.4	MD trajectory analysis	150
7.4	Results and Discussions	150
7.4.1	Area per lipid analysis	150
7.4.2	Membrane thickness analysis	151
7.4.3	Electron Density Profiles analysis	152
7.4.4	RMSD analysis	154
7.4.5	RMSF analysis	155
7.4.6	Intermolecular Hydrogen bond analysis	156
7.4.7	Conformational snapshots of $\alpha$ -Synuclein mutants	168
7.4.8	Secondary structural analysis	173
7.4.9	Distance analysis	176

## Table of contents

7.5	Conclusion	177
<b>Chapter 8a: Computational investigation on the effect of the peptidomimetic inhibitors (NPT100-18A and NPT200-11) on the <math>\alpha</math>-Synuclein and lipid membrane interactions</b>		
8a.1	Abstract	180
8a.2	Introduction	180
8a.3	Materials and methods	182
8a.3.1	Molecular Docking of the complexes ( $\alpha$ -Synuclein-NPT100-18A and $\alpha$ -Synuclein-NPT200-11)	182
8a.3.1.1	Preparation of receptor molecule	182
8a.3.1.2	Preparation of ligand	182
8a.3.2	Computational details	183
8a.3.3	Preparation of the docked complexes	183
8a.3.4	Preparation of Simulation setup for $\alpha$ -Synuclein and docked complexes	184
8a.3.5	MD trajectory analysis	184
8a.3.6	Principal Component Analysis (PCA) analysis followed by free energy landscape (FEL) of MD trajectories	185
8a.3.7	Binding Free Energy (BFE) Calculations	
8a.4	Results and Discussions	185
8a.4.1	Parameterization of compounds NPT100-18A and NPT200-11	185
8a.4.2	Area per Lipid Analysis	188
8a.4.3	Membrane Thickness Analysis	188
8a.4.4	Electron Density Profile Analysis	189
8a.4.5	Conformational changes of docked membrane bound $\alpha$ -Synuclein and inhibitor molecule (NPT100-18A and NPT200-11) complexes during MD simulation	194
8a.4.6	RMSD Analysis	197
8a.4.7	Principal Component Analysis (PCA) followed by Free Energy Landscape analysis	198
8a.4.8	RMSF Analysis	199
8a.4.9	Distance Analysis	200
8a.4.10	Secondary Structural Analysis	202
8a.4.11	Intermolecular Hydrogen bond analysis	204
8a.4.12	Binding Free Energy (BFE) analysis	210
8a.5	Conclusion	210
<b>Chapter 8b: <i>In silico</i> investigation on the structural insights into the binding of Squalamine and Trodusquemine inhibitors with membrane-bound <math>\alpha</math>-Synuclein</b>		
8b.1	Abstract	212
8b.2	Introduction	213

## Table of contents

8b.3	Materials and Methods	215
8b.3.1	Molecular Docking of the $\alpha$ -Synuclein and inhibitor molecules (Squalamine and Trodusquemine)	215
8b.3.1.1	Preparation of the receptor WT $\alpha$ -Synuclein	215
8b.3.1.2	Optimization of the inhibitor molecules (Squalamine and Trodusquemine)	216
8b.3.2	Docking of $\alpha$ -Synuclein protein and inhibitor molecules (Squalamine and Trodusquemine)	216
8b.3.3	Formation of membrane bound $\alpha$ -Synuclein protein and inhibitor molecules (Squalamine and Trodusquemine)	217
8b.3.4	Setup for MD simulations	217
8b.3.5	Binding Free Energy (BFE) analysis	
8b.4	Results and Discussions	217
8b.4.1	Density Functional Theory Calculation of Squalamine and Trodusquemine molecules	217
8b.4.2	Docking study of $\alpha$ -Synuclein + inhibitor molecules (Squalamine and Trodusquemine)	220
8b.4.3	Conformational snapshots of the ( $\alpha$ -Synuclein +Squalamine) and ( $\alpha$ -Synuclein+Trodusquemine) complexes	221
8b.4.4	LigPlot analysis between the membrane-bound ( $\alpha$ -Synuclein+Squalamine) and ( $\alpha$ -Synuclein +Trodusquemine) complexes	224
8b.4.5	Secondary structural content analysis	227
8b.4.6	Binding Free Energy (BFE) Analysis	227
8b.4.7	Salt bridge formation	228
8b.5	Conclusion	229
<b>Chapter 9: C-terminal truncation of <math>\alpha</math>-Synuclein protein (1-99 and 1-108) and its subsequent effect on membrane protein interaction</b>		
9.1	Abstract	232
9.2	Introduction	232
9.3	Materials and method	234
9.3.1	Preparation of C-terminal truncated $\alpha$ -Synuclein monomers	234
9.3.2	Preparation of Simulation setup for truncated C-terminal domain of $\alpha$ -Synuclein	235
9.3.3	MD simulation analysis	235
9.3.4	Principal Component Analysis (PCA) followed by free energy landscape of MD trajectories	236
9.4	Results and Discussions	236
9.4.1	Area per lipid analysis of truncated CTD $\alpha$ -Synuclein monomers	236
9.4.2	Electron Density Profile Analysis of truncated CTD $\alpha$ -Synuclein monomers	237
9.4.3	RMSD analysis	238
9.4.4	RMSF analysis	240

## Table of contents

9.4.5	Secondary Structural Analysis	240
9.4.6	Radius of gyration analysis	242
9.4.7	Hydrogen bond analysis between membrane and NAC region of CTD $\alpha$ -Synuclein monomers	243
9.4.8	Principal Component Analysis (PCA)	248
9.4.9	Conformational Snapshots of truncated CTD (1-99 and 1-108) of $\alpha$ -Synuclein associated with membrane	249
9.4.10		252
9.4.11	Distance Analysis Salt Bridge interactions	253
9.5	Conclusion	255
<b>Chapter 10: An <i>in silico</i> approach on the effects of phosphorylated (pY39, pS87 and pS129) <math>\alpha</math>-Synuclein on the membrane protein interaction</b>		
10.1	Abstract	257
10.2	Introduction	258
10.3	Materials and Methods	261
10.3.1	Preparation of phosphorylated $\alpha$ -Synuclein structures	261
10.3.2	Preparation of pY39, pS87 and pS129 $\alpha$ -Synuclein membrane bilayer complexes	262
10.3.3	Setup for MD simulations	262
10.3.4	Analysis of MD trajectories	263
10.3.5	Principal Component analysis (PCA) along with free energy landscape	263
10.4	Results and Discussions	263
10.4.1	Lipid surface area and thickness of the mixed lipid bilayer system	263
10.4.2	Electron Density Profiles of the mixed lipid bilayer system	265
10.4.3	RMSD analysis of the phosphorylated (pY39, pS87 and pS129) $\alpha$ -Synuclein complexes	267
10.4.4	Free energy landscape profile followed by Principal component analysis(PCA)	268
10.4.5	RMSF analysis of phosphorylated $\alpha$ -Synuclein complexes	270
10.4.6	Radius of gyration analysis of phosphorylated $\alpha$ -Synuclein complexes	271
10.4.7	Secondary Structural Analysis of phosphorylated $\alpha$ -Synuclein complexes	272
10.4.8	Analysis of the Conformational Dynamics of phosphorylated $\alpha$ -Synuclein complexes	273
10.4.9	Hydrogen bond formation between phosphorylated $\alpha$ -Synuclein and lipid membrane	277
10.4.10	Hydrogen bond Analysis within phosphorylated $\alpha$ -Synuclein complexes	286
10.4.11	Phosphorylated $\alpha$ -Synuclein complexes stabilizes salt bridge formation	289
10.4.12	Distance Analysis of phosphorylated $\alpha$ -Synuclein	290

## *Table of contents*

	complexes	
10.5	Conclusion	291
<b>Chapter 11: Summary and Future Prospects 294-296</b>		
11.1	Overview of Results	295
11.2	Future Prospects	296
